SERVO MOTOR INSTRUCTION MANUAL (Vol. 3)

● Safety Instructions ●

Please read the instructions carefully before using the equipment.

Do not attempt to install, operate, maintain or inspect the equipment until you have read through this Instruction Manual and appended documents carefully and can use the equipment correctly. Do not use the equipment until you have a full knowledge of the equipment, safety information and instructions.

In this Instruction Manual, the safety instruction levels are classified into "WARNING" and "CAUTION".

WARNING

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

CAUTION

Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight injury to personnel or may cause physical damage.

Note that the CAUTION level may lead to a serious consequence according to conditions.

Please follow the instructions of both levels because they are important to personnel safety.

What must not be done and what must be done are indicated by the following diagrammatic symbols.

Indicates what must not be done. For example, "No Fire" is indicated by

Indicates what must be done. For example, grounding is indicated by

In this Instruction Manual, instructions at a lower level than the above, instructions for other functions, and so on are classified into "POINT".

After reading this Instruction Manual, keep it accessible to the operator.

1. To prevent electric shock, note the following

WARNING

- Before wiring and inspections, turn off the power and wait for 15 minutes or more until the charge lamp turns off. Then, confirm that the voltage between P+ and N- is safe with a voltage tester and others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.
- Ground the servo amplifier and servo motor securely.
- Any person who is involved in wiring and inspection should be fully competent to do the work.
- Do not attempt to wire the servo amplifier and servo motor until they have been installed. Otherwise, it may cause an electric shock.
- The cables should not be damaged, stressed, loaded, or pinched. Otherwise, it may cause an electric shock.
- To avoid an electric shock, insulate the connections of the power supply terminals.

2. To prevent fire, note the following

CAUTION

- Install the servo motor on incombustible material. Installing it directly or close to combustibles will lead to a fire.
- Provide an adequate protection to prevent screws and other conductive matter, oil and other combustible matter from entering the servo motor.

3. To prevent injury, note the following

CAUTION

- Only the voltage specified in the Instruction Manual should be applied to each terminal. Otherwise, a burst, damage, etc. may occur.
- Connect cables to the correct terminals. Otherwise, a burst, damage, etc. may occur.
- Ensure that polarity (+/-) is correct. Otherwise, a burst, damage, etc. may occur.
- The servo motor, etc. may be hot while power is on or for some time after power-off. Take safety measures, e.g. provide covers, to prevent accidental contact of hands and parts (cables, etc.) with them.
- The surface temperature of the servo motor may exceed 100 °C depending on its mounting and operating conditions.
- During operation, never touch the rotor of the servo motor. Otherwise, it may cause injury.

4. Additional instructions

The following instructions should also be fully noted. Incorrect handling may cause a malfunction, injury, electric shock, etc.

(1) Transportation and installation

CAUTION

- Transport the products correctly according to their mass.
- Use the eyebolt of the servo motor for the transportation purpose only. Do not use the eyebolts to transport the servo motor when it is mounted on a machine.

⚠ CAUTION

- Stacking in excess of the specified number of product packages is not allowed.
- Do not carry the servo motor by holding the cables, shaft, encoder, or connector.
- Install the servo amplifier and the servo motor in a load-bearing place in accordance with the Instruction Manual.
- Do not get on or put heavy load on the equipment.
- The equipment must be installed in the specified direction.
- Do not install or operate the servo amplifier and servo motor which have been damaged or have any parts missing.
- Do not block intake and exhaust areas of the servo motor with a cooling fan. Otherwise, it may cause a malfunction.
- Do not drop or strike the servo motor. Isolate it from all impact loads.
- Securely fix the servo motor to the machine. If being attached insecurely, the servo motor may come off during operation.
- The geared servo motor must be installed in the specified direction to prevent oil leakage.
- When handling the servo motor, be careful about the edged parts such as the corners of the servo motor.
- Be sure to measure the motor vibration level with the servo motor mounted to the machine when checking the vibration level. A great vibration may cause the early damage of a bearing, encoder, brake, and reducer. The great vibration may also cause the poor connector connection or bolt looseness.
- For the gain adjustment at the equipment startup, check the torque waveform and the speed waveform with a measurement device, and then check that no vibration occurs. If the vibration occurs due to high gain, the vibration may cause the early damage of the servo motor.
- Take safety measures, e.g. provide covers, to prevent accidental access to the rotor of the servo motor during operation.
- Never hit the servo motor or shaft, especially when coupling the servo motor to the machine. Otherwise, the encoder may malfunction.
- Do not subject the servo motor shaft to more than the permissible load. Otherwise, the shaft may break.
- When you keep or use the equipment, please fulfill the following environment.

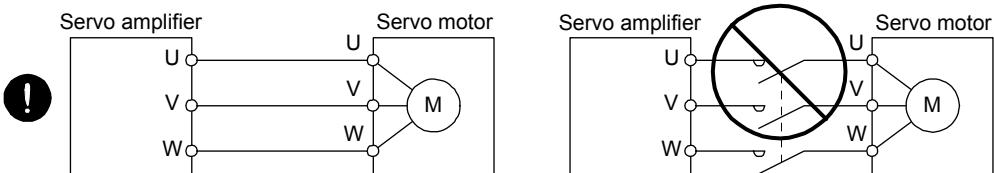

Item		Environment
Ambient temperature	Operation	0 °C to 40 °C (non-freezing)
	Storage	-15 °C to 70 °C (non-freezing)
Ambient humidity	Operation	80 %RH or less (non-condensing)
	Storage	90 %RH or less (non-condensing)
Ambience		Indoors (no direct sunlight), free from corrosive gas, flammable gas, oil mist, dust, and dirt
Altitude		Max. 1000 m above sea level
Vibration resistance (Note)	HG-MR Series/HG-KR Series	X, Y: 49 m/s ²
	HG-SR51/HG-SR81/HG-SR52(4)/ HG-SR102(4)/HG-SR152(4)/HG-JR53(4)/ HG-JR73(4)/HG-JR103(4)/HG-JR153(4)/ HG-JR203(4)/HG-JR353(4)/HG-JR503(4)/ HG-JR11K1M(4)/HG-JR15K1M(4)/ HG-JR22K1M(4)/HG-RR Series/ HG-UR72/HG-UR152	X, Y: 24.5 m/s ²
	HG-SR121/HG-SR201/HG-SR202(4)/ HG-SR352(4)/HG-UR202/HG-UR352/HG-UR502	X: 24.5 m/s ² Y: 49 m/s ²
	HG-SR301/HG-SR421/HG-SR502(4)/ HG-SR702(4)/HG-JR703(4)/HG-JR903(4)	X: 24.5 m/s ² Y: 29.4 m/s ²

Note. Except the geared servo motor.

(2) Wiring

⚠ CAUTION

- Wire the equipment correctly and securely. Otherwise, the servo motor may operate unexpectedly.
- Do not install a power capacitor, surge killer, or radio noise filter (FR-BIF-(H) option) on the servo amplifier output side.
- To avoid a malfunction, connect the wires to the correct phase terminals (U, V, and W) of the servo amplifier and servo motor.
- Connect the servo amplifier power output (U, V, and W) to the servo motor power input (U, V, and W) directly. Do not let a magnetic contactor, etc. intervene. Otherwise, it may cause a malfunction.

- Do not connect AC power supply directly to the servo motor. Otherwise, it may cause a malfunction.
- When the cable is not tightened enough to the terminal block, the cable or terminal block may generate heat because of the poor contact. Be sure to tighten the cable with specified torque.

(3) Test run and adjustment

⚠ CAUTION

- Before operation, check the parameter settings. Improper settings may cause some machines to operate unexpectedly.
- Never adjust or change the parameter values extremely as it will make operation unstable.

(4) Usage

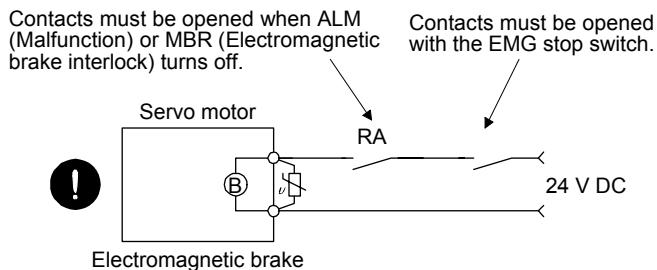

⚠ CAUTION

- Provide an external emergency stop circuit to ensure that operation can be stopped and power switched off immediately.
- Do not scratch the coated surface with hard objects nor clean the coated surface with an organic solvent. Doing so may scuff the surface.
- Do not disassemble, repair, or modify the equipment.
- Use the servo amplifier with the specified servo motor.
- The electromagnetic brake on the servo motor is designed to hold the motor shaft and should not be used for ordinary braking.
- For such reasons as service life and mechanical structure (e.g. where a ball screw and the servo motor are coupled via a timing belt), the electromagnetic brake may not hold the motor shaft. To ensure safety, install a stopper on the machine side.

(5) Corrective actions

⚠ CAUTION

- When it is assumed that a hazardous condition may occur due to a power failure or product malfunction, use a servo motor with an electromagnetic brake or external brake to prevent the condition.
- Configure an electromagnetic brake circuit so that it is activated also by an external EMG stop switch.

- When any alarm has occurred, eliminate its cause, ensure safety, and deactivate the alarm before restarting operation.
- Provide an adequate protection to prevent unexpected restart after an instantaneous power failure.

(6) Storage

⚠ CAUTION

- Note the followings when storing the servo motor for an extended period of time (guideline: three or more months).
 - Always store the servo motor indoors in a clean and dry place.
 - If it is stored in a dusty or damp place, make adequate provision, e.g. cover the whole product.
 - If the insulation resistance of the winding decreases, check how to store the equipment.
 - Though the servo motor is rust-proofed before shipment using paint or rust prevention oil, rust may be produced depending on the storage conditions or storage period.
If the servo motor is to be stored for longer than six months, apply rust prevention oil again especially to the machined surfaces of the shaft, etc.
- Before using the product after storage for an extended period of time, hand-turn the servo motor output shaft to confirm that nothing is wrong with the servo motor. When the servo motor is equipped with an electromagnetic brake, check it after releasing the electromagnetic brake with the brake power supply.
- When the product has been stored for an extended period of time, contact your local sales office.

(7) General instruction

- To illustrate details, the equipment in the diagrams of this Instruction Manual may have been drawn without covers and safety guards. When the equipment is operated, the covers and safety guards must be installed as specified. Operation must be performed in accordance with this Specifications and Instruction Manual.

● DISPOSAL OF WASTE ●

Please dispose a servo motor and other options according to your local laws and regulations.

«U.S. customary units»

U.S. customary units are not shown in this manual. Convert the values if necessary according to the following table.

Quantity	SI (metric) unit	U.S. customary unit
Mass	1 [kg]	2.2046 [lb]
Length	1 [mm]	0.03937 [in]
Torque	1 [N·m]	141.6 [oz·in]
Moment of inertia	1 [($\times 10^{-4}$ kg·m ²)]	5.4675 [oz·in ²]
Load (thrust load/axial load)	1 [N]	0.2248 [lbf]
Temperature	N [°C] × 9/5 + 32	N [°F]

1. INTRODUCTION

1. INTRODUCTION

1.1 Rating plate

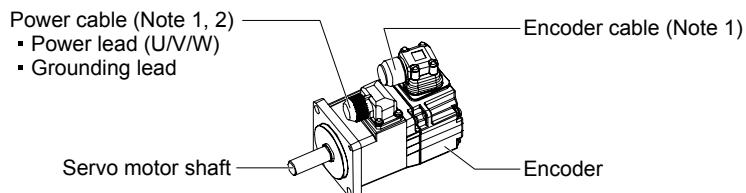

The following shows an example of rating plate for explanation of each item.

- Note 1. Production year and month of the servo motor are indicated in a serial number on the rating plate.
The year and month are indicated by the last two digits of the year and one digit of the month [1 to 9, X(10), Y(11), and Z(12)].
For January 2012, the Serial No. is like, "SER. _____ 121".
2. Products approved by Certification Bodies are marked. The marks depends on the Certification Bodies.

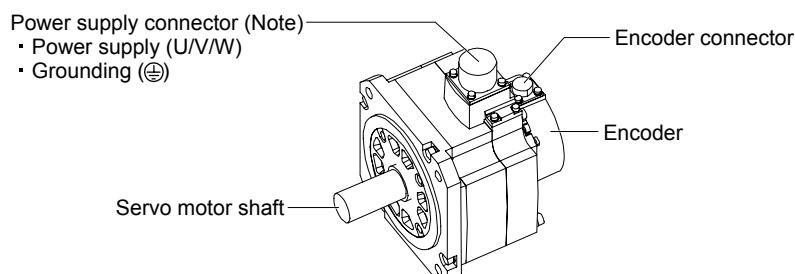

1.2 Parts identification

(1) HG-MR series/HG-KR series servo motor

- Note 1. The encoder cable and power supply cable are options.
2. An electromagnetic brake cable is separately required for the servo motor with an electromagnetic brake.

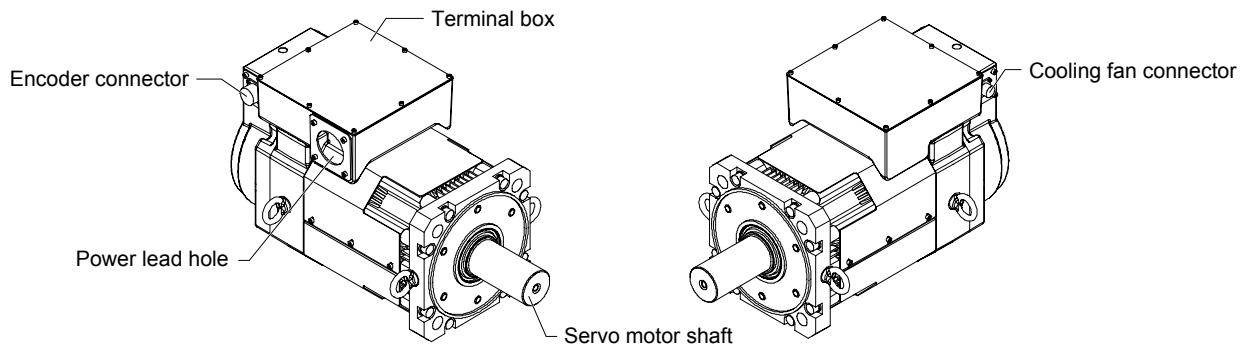

(2) HG-SR series/HG-JR53(4) to HG-JR15K1M(4)/HG-RR series/HG-UR series servo motor

Note. The servo motor with an electromagnetic brake has the electromagnetic brake connector separately.

1. INTRODUCTION

(3) HG-JR22K1M(4) servo motor

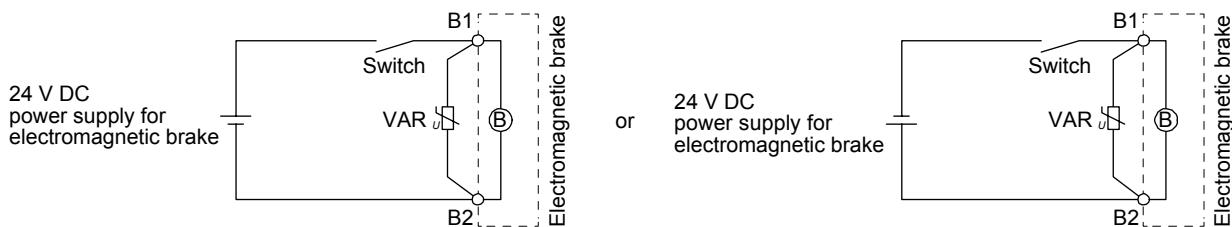

1.3 Electromagnetic brake

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).
 - The electromagnetic brake has a time lag. Use the electromagnetic brake so that servo motor control starts after the electromagnetic brake has completely opened. Be sure to check the time lag of the braking with a real machine.
- ! CAUTION**
- Configure an electromagnetic brake circuit so that it is activated also by an external EMG stop switch.
 - For details of the circuit configuration and timing chart, refer to each servo amplifier instruction manual.
 - While the electromagnetic brake is opened, the motor may be raised to high temperature regardless of driving.
 - The life will be shorten under sudden acceleration/deceleration conditions.

The servo motor with an electromagnetic brake can be used to prevent a drop in vertical lift applications or to ensure double safety at an emergency stop, for example. When operating the servo motor, supply power to the electromagnetic brake to release the brake. Switching power off enables the electromagnetic brake.

(1) Electromagnetic brake power supply

Prepare the following power supply for use with the electromagnetic brake only. The electromagnetic brake terminals (B1 and B2) have no polarity.

The surge absorber (VAR) must be installed between B1 and B2. For the selection and example of surge absorbers, refer to "Electromagnetic brake characteristic" in the chapter of each servo motor series.

When you use a diode for a surge absorber, the electromagnetic braking time will be longer.

1. INTRODUCTION

(2) Sound generation

Though the brake lining may rattle during operation, it poses no functional problem.

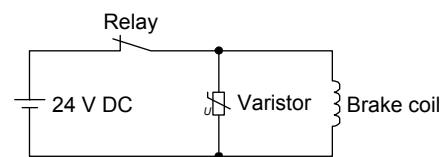

If braking sounds, it may be improved by setting the machine resonance suppression filter in the servo amplifier parameters. For details, refer to each servo amplifier instruction manual.

(3) Selection of surge absorbers for electromagnetic brake circuit

The following shows an example how to select a varistor with a surge absorber.

(a) Selection conditions

Item	Condition
Electromagnetic brake specification	R [Ω]: Resistance L [H]: Inductance Vb [V]: Power supply voltage
Desired suppression voltage	Vs [V] or less
Durable surge application time	N times

(b) Tentative selection and verification of surge absorber

1) Maximum allowable circuit voltage of varistor

Tentatively select a varistor whose maximum allowable voltage is larger than Vb [V].

2) Brake current (Ib)

$$Ib = \frac{Vb}{R} [A]$$

3) Energy (E) generated by brake coil

$$E = \frac{L \times Ib^2}{2} [J]$$

4) Varistor limit voltage (Vi)

From the energy (E) generated in the brake coil and the varister characteristic diagram, calculate the varistor limit voltage (Vi) when the brake current (Ib) flows into the tentatively selected varistor during opening of the circuit.

Vi is favorable when the varistor limit voltage (Vi) [V] is smaller than the desired suppressed voltage (Vs) [V].

If Vi is not smaller than Vs, reselect a varistor or improve the withstand voltage of devices.

5) Surge current width (τ)

Given that the varistor absorbs all energies, the surge current width (τ) will be as follows.

$$\tau = \frac{E}{Vi \times Ib} [S]$$

6) Examining surge life of varister

From the varistor characteristic diagram, the guaranteed current value (Ip) in which the number of the surge application life is N at the surge current width (τ). Calculate the guaranteed current value (Ip) ratio to brake current (Ib).

If an enough margin is ensured for Ip/Ib, the number of the surge application life N [time] can be considered as favorable.

1. INTRODUCTION

(4) Others

A leakage magnetic flux will occur at the shaft end of the servo motor equipped with an electromagnetic brake. Note that chips, screws and other magnetic substances are attracted.

1.4 Servo motor shaft shapes

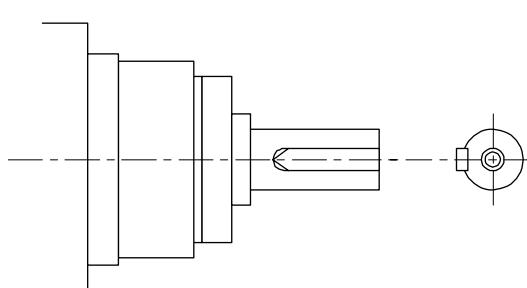

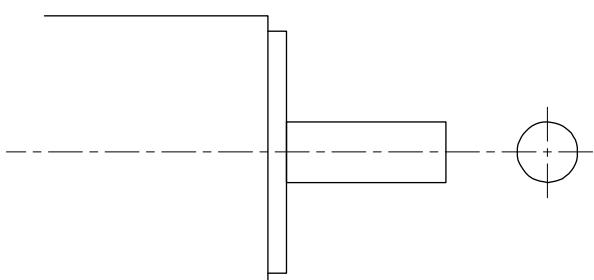

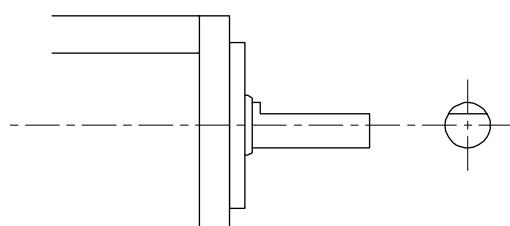

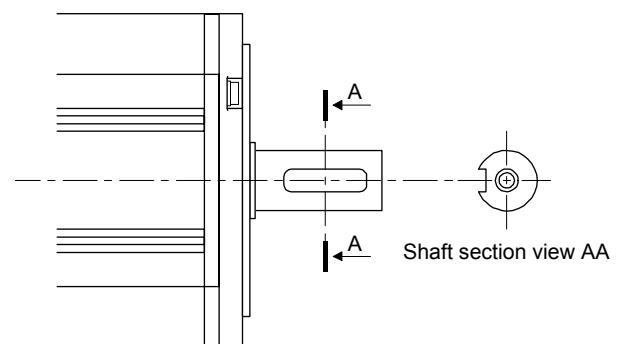

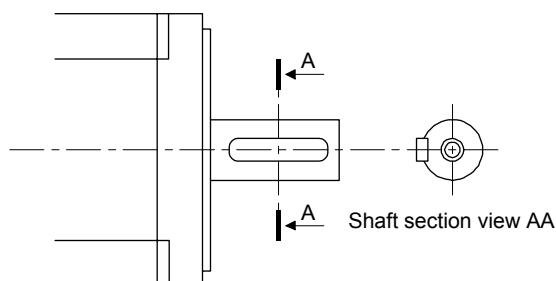

In addition to the straight shaft, the key shaft and D cut shaft are available as the servo motor shafts.

The key shaft and D cut shaft cannot be used in frequent start/stop applications.

Since we cannot warrant the servo motor against fracture and similar accidents attributable to a loose key, use a friction coupling, etc. when coupling the shaft with a machine.

The shaft shape of the standard servo motor changes depending on the series and capacity. Refer to the chapter of the servo motor series.

The key shaft (with single pointed key) applies to only the geared servo motor for high precision application.

2. INSTALLATION

2. INSTALLATION

WARNING ● To prevent electric shock, ground each equipment securely.

- Stacking in excess of the specified number of product packages is not allowed.
- Install the equipment on incombustible material. Installing it directly or close to combustibles will lead to a fire.
- Install the servo amplifier and the servo motor in a load-bearing place in accordance with the Instruction Manual.
- Do not get on or put heavy load on the equipment. Otherwise, it may cause injury.
- Use the equipment within the specified environmental range. For the environment, refer to the specifications of the servo motor series.
- Do not drop or strike the servo motor. Isolate it from all impact loads.
- Do not install or operate a faulty servo motor.
- Do not carry the servo motor by holding the cables, shaft, encoder, or connector. Otherwise, it may cause a malfunction or injury.
- Use the eyebolts of the servo motor to only transport it. Do not use the eyebolts to transport the servo motor when it is mounted on a machine.
- The geared servo motor must be mounted in the specified direction. Otherwise, it can leak oil, leading to a fire or malfunction.
- Securely fix the servo motor to the machine. If being attached insecurely, the servo motor may come off during operation, leading to injury.
- Be sure to measure the motor vibration level with the servo motor mounted on the machine when checking the vibration level. A great vibration may cause the early damage of a bearing, encoder, brake, and reducer. The great vibration may also cause the poor connector connection or bolt looseness.
- For the gain adjustment at the equipment startup, check the torque waveform and the speed waveform with a measurement device to check that no vibration occurs. If the vibration occurs due to high gain, the vibration may cause the early damage of the servo motor.
- Never hit the servo motor or shaft, especially when coupling the servo motor to the machine. Otherwise, the encoder may malfunction.
- When coupling a load to the servo motor, do not use a rigid coupling. Doing so can cause the shaft to break and the bearing to wear out.
- Balance the load to the extent possible. Not doing so can cause vibration during servo motor operation or damage the bearings and encoder.
- Take safety measures, e.g. provide covers, to prevent accidental access to the rotor of the servo motor during operation.
- Do not subject the servo motor shaft to more than the permissible load. Otherwise, the shaft may break, leading to injury.
- When the product has been stored for an extended period of time, contact your local sales office.
- When handling the servo motor, be careful about the edged parts such as the corners of the servo motor.

! CAUTION

2. INSTALLATION

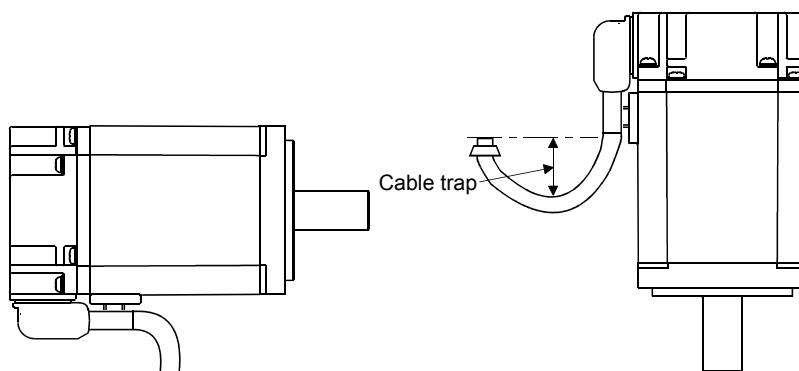

2.1 Mounting direction

(1) Standard servo motor

The following table indicates the mounting direction of the standard servo motor.

Servo motor series	Mounting direction
HG-MR	
HG-KR	
HG-SR	
HG-JR	
HG-RR	All directions
HG-UR	

For mounting in the horizontal direction, it is recommended to set the connector section downward. When installing the servo motor vertically or obliquely, provide a connection and trap for the cable.

(2) Servo motor with an electromagnetic brake

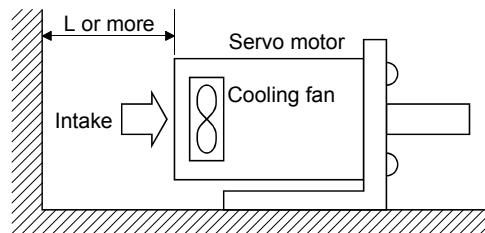

The servo motor with an electromagnetic brake can also be installed in the same orientation as the standard servo motor. When the servo motor with an electromagnetic brake is installed with the shaft end at top, the brake plate may generate sliding sound but it is not a fault.

(3) Geared servo motors

The mounting direction of the geared servo motor differs depending on the reducer type. Be sure to mount it in the specified direction. Refer to the chapter of the servo motor series for details.

2.2 Cooling fan

For the servo motor with a cooling fan, ensure to put enough space for the distance L between intake port and wall surface. Refer to the chapter of the servo motor series for the distance L.

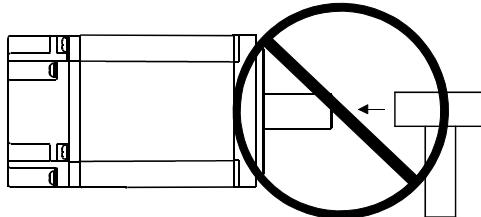

2. INSTALLATION

2.3 Load remove precautions

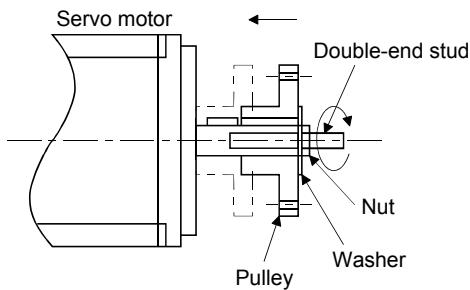

- During assembling, the shaft end must not be hammered. Otherwise, the encoder may malfunction.

! CAUTION

- Do not process the shaft to avoid damage to the encoder and bearing.

- (1) When mounting a pulley to the servo motor with a key shaft, use the screw hole in the shaft end. To fit the pulley, first insert a double-end stud into the screw hole of the shaft, put a washer against the end face of the coupling, and insert and tighten a nut to force the pulley in.

- (2) For the shaft without a key, use a friction coupling or the like.
- (3) When removing the pulley, use a pulley remover to protect the shaft from hard load and or impact.
- (4) To ensure safety, fit a protective cover or the like on the rotary area, such as the pulley, mounted to the shaft.
- (5) When a threaded shaft end part is needed to mount a pulley on the shaft, please contact your local sales office.
- (6) The direction of the encoder on the servo motor cannot be changed.
- (7) When mounting the servo motor, use spring washers, etc. and fully tighten the bolts so that they do not become loose due to vibration.

2. INSTALLATION

2.4 Permissible load for the shaft

●Do not use a rigid coupling as it may apply excessive bending load to the shaft of the servo motor, leading the shaft to break and the bearing to wear out.

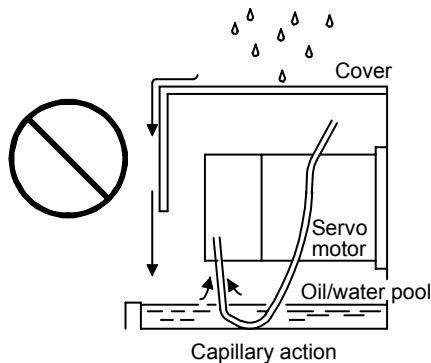

For the permissible shaft load specific to the servo motor, refer to the chapter of the servo motor series.

- (1) Use a flexible coupling and adjust the misalignment of the shaft to less than the permissible radial load.
- (2) When using a pulley, sprocket or timing belt, select a diameter that will fit into the permissible radial load.
- (3) Excess of the permissible load can cause the bearing life to reduce and the shaft to break.
- (4) The load indicated in this section is static load in a single direction and does not include eccentric load. Make eccentric load as small as possible. Not doing so can cause the servo motor to be damaged.

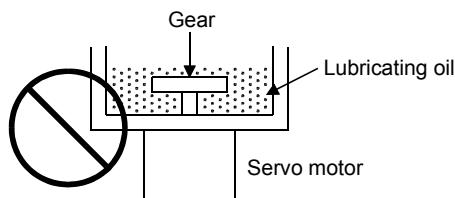

2.5 Protection from oil and water

Provide adequate protection to prevent foreign matter, such as oil from entering the servo motor shaft. When installing the servo motor, consider the items in this section.

- (1) Do not use the servo motor with its cable soaked in oil or water.

- (2) When the servo motor is to be installed with the shaft end at top, provide measures so that it is not exposed to oil and water entering from the machine side, gear box, etc.

- (3) If oil such as cutting oil drops on the servo motor, the sealant, packing, cable and others may be affected depending on the oil type.
- (4) In the environment where the servo motor is exposed to oil mist, oil, water, grease and/or like, a standard specifications servo motor may not be usable. Please contact your local sales office.

2. INSTALLATION

2.6 Cable

The power supply and encoder cables routed from the servo motor should be fixed to the servo motor to keep them unmovable. Otherwise, the cable may disconnect. In addition, do not modify the connectors, terminals and others at the ends of the cables.

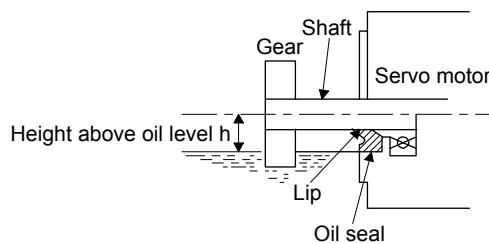

2.7 Servo motor with oil seal

For the servo motor with oil seal, the oil seal prevents the entry of oil into the servo motor. Make sure to install it according in this section.

The functions have no problem even if the servo motor with oil seal may sound during operation.

(1) Pressure and oil level

Install the servo motor horizontally, and set the oil level in the gear box to be lower than the oil seal lip always. If the oil level is higher than the oil seal lip, the oil enter the servo motor and may cause a malfunction. Refer to the chapter of the servo motor series for the oil level.

High pressure against the oil seal causes the abrasion and makes the life be short. Keep constant internal pressure by equipping a ventilator to the gear box.

(2) Temperature

High temperature against the oil seal lip makes the life be short. Avoid exposing the oil seal lip to high temperature oil since applicable temperature of the material is up to 100 °C and temperature of the oil seal lip rises within 10 °C to 15 °C at maximum rotation.

2.8 Inspection items

- ⚠ WARNING**
- Before starting maintenance and/or inspection, turn off the power and wait for 15 minutes or more until the charge lamp turns off. Then, confirm that the voltage between P+ and N- is safe with a voltage tester and others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.
 - To avoid an electric shock, only qualified personnel should attempt inspections. For repair and parts replacement, contact your local sales office.

- ⚠ CAUTION**
- Do not disassemble and/or repair the equipment on customer side.

It is recommended that the following points periodically be checked.

- (1) Check the bearings, brake section, etc. for unusual noise.
- (2) Check the cables and the like for scratches or cracks. Especially when the cable is movable, perform periodic inspection according to operating conditions.

2. INSTALLATION

- (3) Check the servo motor shaft and coupling for misalignment.
- (4) Check the power supply connector and encoder connector tightening screws for looseness.

2.9 Parts having service lives

Service lives of the following parts are listed below. However, the service lives vary depending on operation and environment. If any fault is found in the parts, they must be replaced immediately regardless of their service lives. For parts replacement, please contact your local sales office.

Part name	Life guideline
Bearings	20,000 hours to 30,000 hours
Encoder	20,000 hours to 30,000 hours
Cooling fan	20,000 hours
Oil seal	5000 hours

(1) Bearings

When the servo motor is run at rated speed under rated load, bearings should be exchanged in 20,000 to 30,000 hours as a guideline. This differs on the operating conditions. The bearings must also be changed if unusual noise or vibration is found during inspection.

(2) Oil seal (including oil seal used on the reducer)

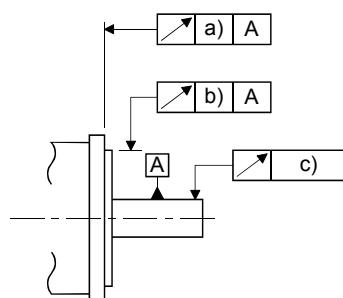

Oil seals must be changed in 5,000 hours of operation at rated speed as a guideline. They must also be changed if oil leakage, etc. is found during inspection.

The functions have no problem even if an oil seal may sound during operation.

2.10 Machine accuracies

The following table indicates the machine accuracies of the servo motor around the output shaft and mounting. (except the optional products)

Accuracy [mm]	Measuring position	Flange size			
		100 × 100 or less	130 × 130	176 × 176 to 250 × 250	280 × 280 or more
Runout of flange surface to output shaft	a)	0.05	0.06	0.08	0.08
Runout of fitting OD of flange surface	b)	0.04	0.04	0.06	0.08
Runout of output shaft end	c)	0.02	0.02	0.03	0.03

3. CONNECTORS USED FOR SERVO MOTOR WIRING

3. CONNECTORS USED FOR SERVO MOTOR WIRING

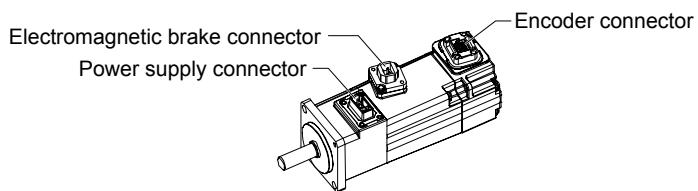

POINT

- The IP rating indicated is the connector's protection against ingress of dust and water when the connector is connected to a servo amplifier or servo motor. If the IP rating of the connector, servo amplifier and servo motor vary, the overall IP rating depends on the lowest IP rating of all components.

3.1 Selection of connectors

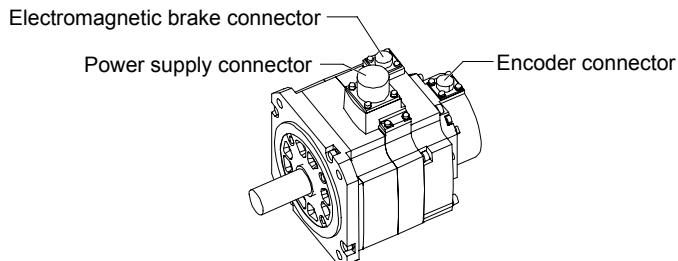

Use the connector configuration products given in the table as the connectors for connection with the servo motor. Refer to section 3.2 to 3.4 for the compatible connector configuration products.

(1) HG-MR series and HG-KR series

Servo motor	Wiring connector		
	For encoder	For power supply	For electromagnetic brake
HG-MR_	Connector configuration A	Connector configuration B	Connector configuration C
HG-KR_			

(2) HG-SR series

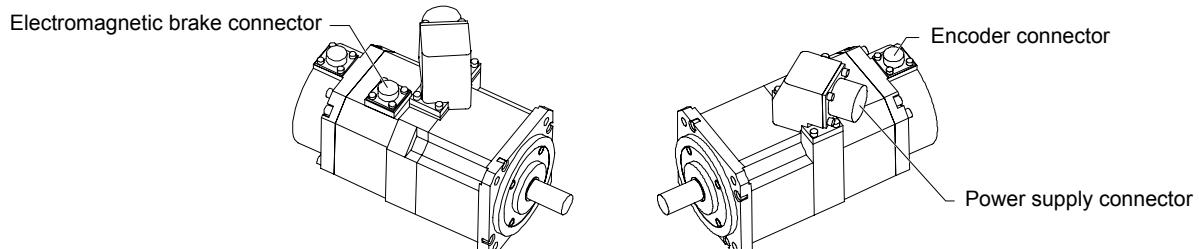

Servo motor	Wiring connector		
	For encoder	For power supply	For electromagnetic brake
HG-SR51			
HG-SR81			
HG-SR52(4)			
HG-SR102(4)			
HG-SR152(4)			
HG-SR121			
HG-SR201			
HG-SR301			
HG-SR202(4)			
HG-SR352(4)			
HG-SR502(4)			
HG-SR421			
HG-SR702(4)			

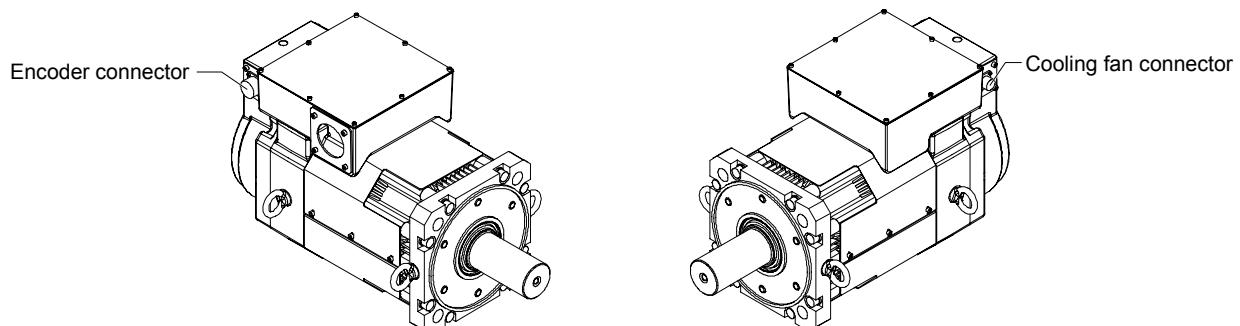

3. CONNECTORS USED FOR SERVO MOTOR WIRING

(3) HG-JR series

HG-JR53(4) to HG-JR11K1M(4)

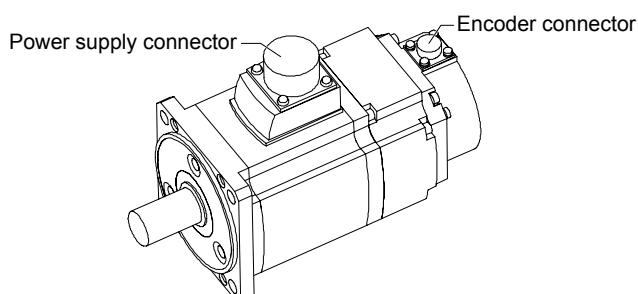

HG-JR22K1M(4)

Servo motor	Wiring connector			
	For encoder	For power supply	For electromagnetic brake	For cooling fan
HG-JR53(4) HG-JR73(4) HG-JR103(4) HG-JR153(4) HG-JR203(4) HG-JR3534 HG-JR5034	Connector configuration D	Connector configuration E	Connector configuration F	
HG-JR353 HG-JR503		Connector configuration G		
HG-JR703(4) HG-JR903(4)		Connector configuration H		
HG-JR11K1M(4) HG-JR15K1M(4)	Connector configuration K		Connector configuration J	
HG-JR22K1M(4)		None (terminal box)		Connector configuration L

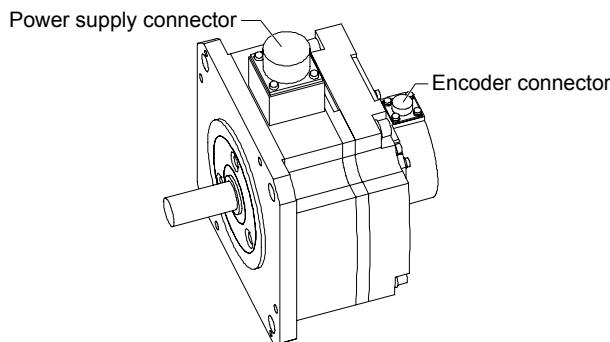

(4) HG-RR series

Servo motor	Wiring connector		
	For encoder	For power supply	For electromagnetic brake
HG-RR103 HG-RR153 HG-RR203	Connector configuration D	Connector configuration N	Sharing for power supply
HG-RR353 HG-RR503		Connector configuration M	

3. CONNECTORS USED FOR SERVO MOTOR WIRING

(5) HG-UR series

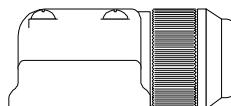

Servo motor	Wiring connector		
	For encoder	For power supply	For electromagnetic brake
HG-UR72 HG-UR152	Connector configuration D	Connector configuration N	Sharing for power supply (Note)
HG-UR202 HG-UR352 HG-UR502		Connector configuration M	Connector configuration J

Note. Electromagnetic brake connector is not required since the power supply connector has a pin assigned for electromagnetic brake.

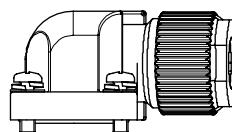

3.2 Wiring connectors (connector configurations A/B/C)

The connectors in this section comply with UL/CSA standards.

Connector configuration	Feature	Connector	Crimping tool	Servo motor encoder connector (Note)
A (for encoder)	IP65	Connector: 2174053-1 (TE Connectivity)	For ground clip: 1596970-1 For REC. contact: 1596847-1 (TE Connectivity)	1674339-1 (TE Connectivity)

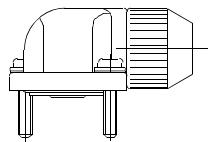

Note. The other side connector

Connector configuration	Feature	Connector	Crimping tool	Servo motor power supply connector (Note)
B (for power supply)	IP65	Connector: KN4FT04SJ1-R HOOD/SOCKET INSULATOR/ BUSHING/GROUND NUT Contact: ST-TMH-S-C1B-100 (A534G) (JAE)	CT160-3-TMH5B (JAE)	JN4AT04NJ1 (JAE)

Note. The other side connector

3. CONNECTORS USED FOR SERVO MOTOR WIRING

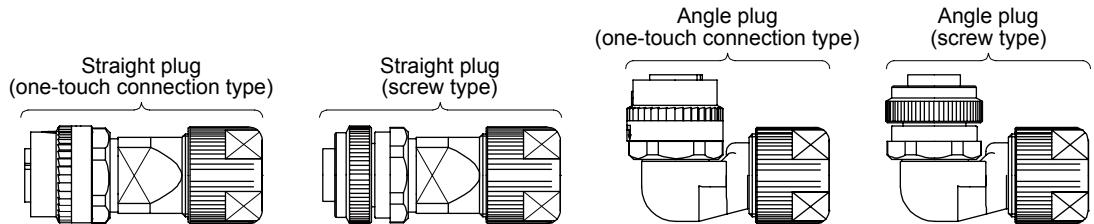

Connector configuration	Feature	Connector	Crimping tool	Servo motor electromagnetic brake connector (Note)
C (for electromagnetic brake)	IP65	Connector: JN4FT02SJ1-R HOOD/SOCKET INSULATOR/ BUSHING/GROUND NUT Contact: ST-TMH-S-C1B-100 (A534G) (JAE)	CT160-3-TMH5B (JAE)	JN4AT02PJ1 (JAE)

	General environment UL/CSA compliant	Straight	D/MS3106B22-23S Applicable wire size: AWG 14 to 12	15.9 or less (bushing ID)	D/MS3057-12A		
		Angle	D/MS3108B22-23S Applicable wire size: AWG 14 to 12				

Note. The connector to be mated.

3. CONNECTORS USED FOR SERVO MOTOR WIRING

MEMO

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

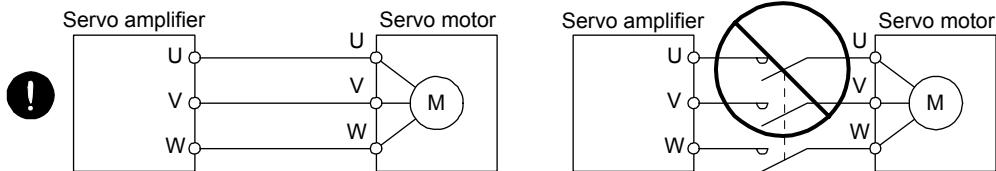

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

- Any person who is involved in wiring should be fully competent to do the work.
- Ground the servo motor securely.
- Do not attempt to wire the servo motor until it has been mounted. Otherwise, it may cause an electric shock.
- The cables should not be damaged, stressed, loaded, or pinched. Otherwise, it may cause an electric shock.
- To avoid an electric shock, insulate the connections of the power supply terminals.

⚠ WARNING

- Wire the equipment correctly and securely. Otherwise, the servo motor may operate unexpectedly, resulting in injury.
- Connect cables to the correct terminals. Otherwise, a burst, damage, etc. may occur.
- Ensure that polarity (+/-) is correct. Otherwise, a burst, damage, etc. may occur.
- Do not install a power capacitor, surge killer or radio noise filter (FR-BIF-(H) option) with the power line of the servo motor.
- Do not modify the equipment.
- Connect the servo amplifier power output (U, V, and W) to the servo motor power input (U, V, and W) directly. Do not let a magnetic contactor, etc. intervene. Otherwise, it may cause a malfunction.

⚠ CAUTION

POINT

- We recommend using HIV wires to connect the servo amplifier to the servo motor. Therefore, recommended wire sizes may differ from those of the used wires for the previous servo motors.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

4.1 Connection instructions

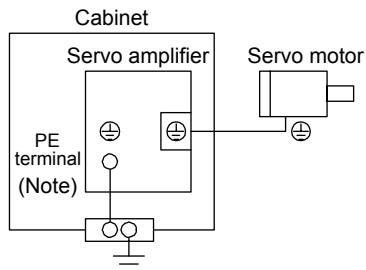

! CAUTION

- To avoid a malfunction, connect the wires to the correct phase terminals (U, V, and W) of the servo amplifier and servo motor.
- Do not connect AC power supply directly to the servo motor. Otherwise, it may cause a malfunction.
- Do not use the 24 V DC interface power supply for the electromagnetic brake. Always use the power supply designed exclusively for the electromagnetic brake. Otherwise, it may cause a malfunction.

POINT

- Refer to chapter 5 for the selection of the encoder cable.
- Refer to the chapter of the servo motor series for the selection of a surge absorber for the electromagnetic brake.

For grounding, connect the grounding lead wire from the servo motor to the protective earth (PE) terminal of the servo amplifier, and then connect the wire from the servo amplifier to the ground via the protective earth of the cabinet. Do not connect the wire directly to the protective earth of the cabinet.

Note. The number of PE terminals of the servo amplifier differs depending on the amplifier types.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

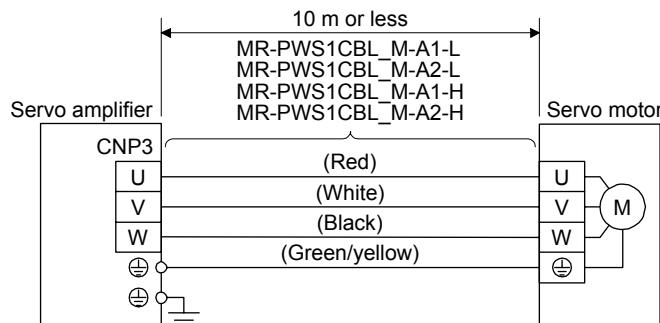

4.2 Wiring

4.2.1 HG-MR series/HG-KR series servo motor

(1) Connection with MR-J4 1-axis servo amplifier

(a) Servo motor power supply cable wiring diagrams

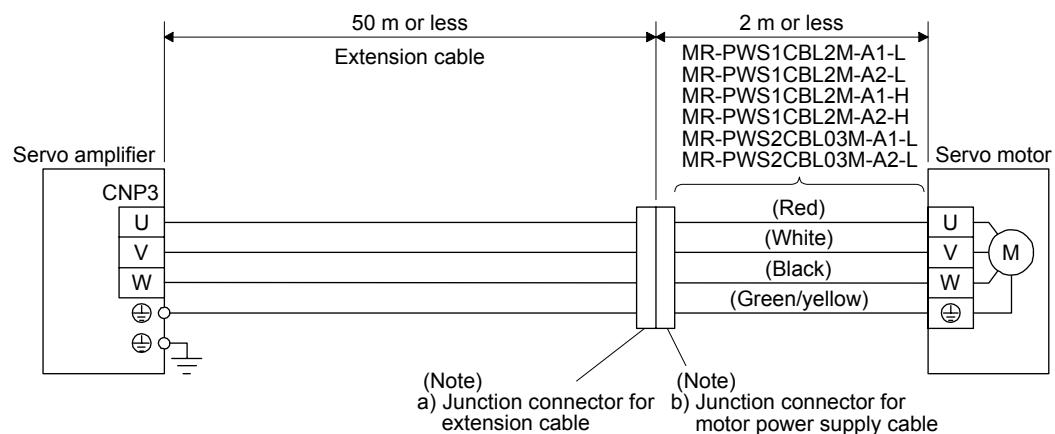

1) When cable length is 10 m or less

2) When cable length exceeds 10 m

When the cable length exceeds 10 m, fabricate an extension cable as shown below. In this case, the motor power supply cable should be within 2 m long.

Refer to section 4.3 for the wire used for the extension cable.

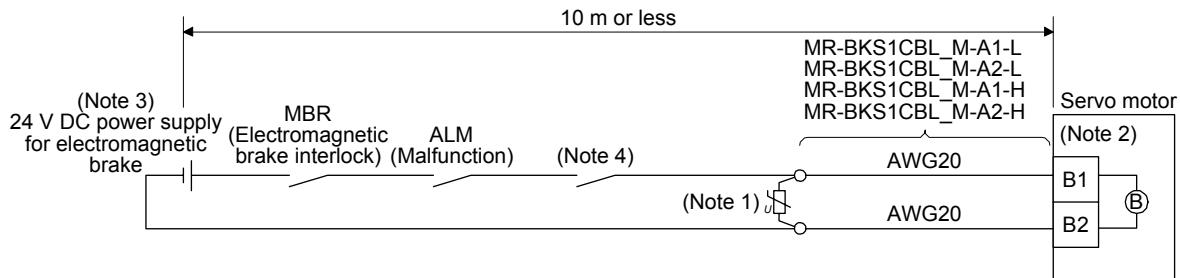

Note. Use of the following connectors is recommended when ingress protection (IP65) is necessary.

Junction connector	Description	IP rating
a) Junction connector for extension cable	Connector: RM15WTPZ-4P(71) Cord clamp: JR13WCC-5(72) (Hirose Electric)	IP65 Numeral changes depending on the cable OD.
b) Junction connector for motor power supply cable	Connector: RM15WTJZ-4S(71) Cord clamp: JR13WCC-8(72) (Hirose Electric)	IP65 Numeral changes depending on the cable OD.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(b) Electromagnetic brake cable wiring diagrams

1) When cable length is 10 m or less

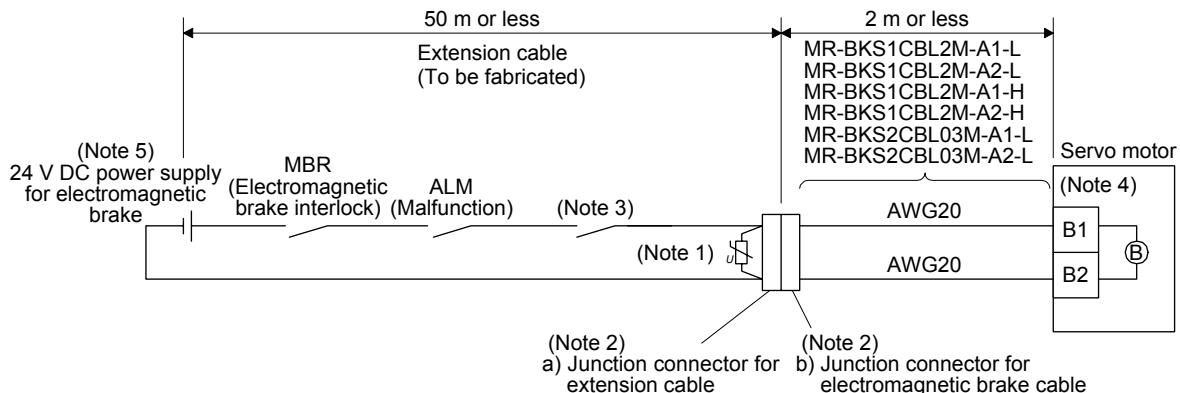

- Note
1. Connect a surge absorber as close to the servo motor as possible.
 2. There is no polarity in electromagnetic brake terminals (B1 and B2).
 3. Do not use the 24 V DC interface power supply for the electromagnetic brake.
 4. Create the circuit in order to shut off by interlocking with the emergency stop switch.

When fabricating the electromagnetic brake cable MR-BKS1CBL-_M-H, refer to section 5.4 and 5.5.

2) When cable length exceeds 10 m

When the cable length exceeds 10 m, fabricate an extension cable as shown below. In this case, the electromagnetic brake cable should be within 2 m.

Refer to section 4.3 for the wire used for the extension cable.

- Note
1. Connect a surge absorber as close to the servo motor as possible.
 2. Use of the following connectors is recommended when ingress protection (IP65) is necessary.

Junction connector	Description	IP rating
a) Junction connector for extension cable	CM10-CR2P-*(DDK) └ Wire size: S, M, L	IP65
b) Junction connector for electromagnetic brake cable	CMV1-SP2S-*(DDK) └ Wire size: S, M1, M2, L	IP65

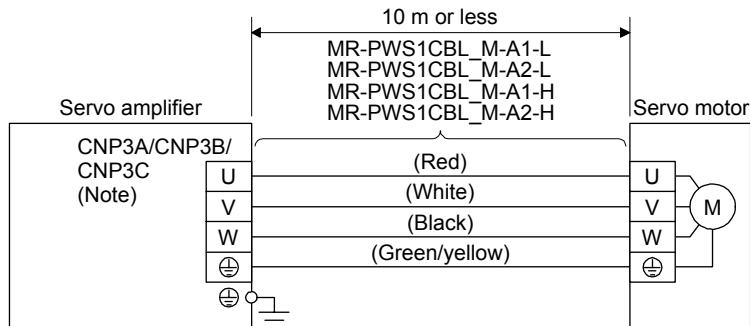

3. Create the circuit in order to shut off by interlocking with the emergency stop switch.
4. There is no polarity in electromagnetic brake terminals (B1 and B2).
5. Do not use the 24 V DC interface power supply for the electromagnetic brake.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(2) Connection with MR-J4 multi-axis servo amplifier

(a) Servo motor power supply cable wiring diagrams

1) When cable length is 10 m or less

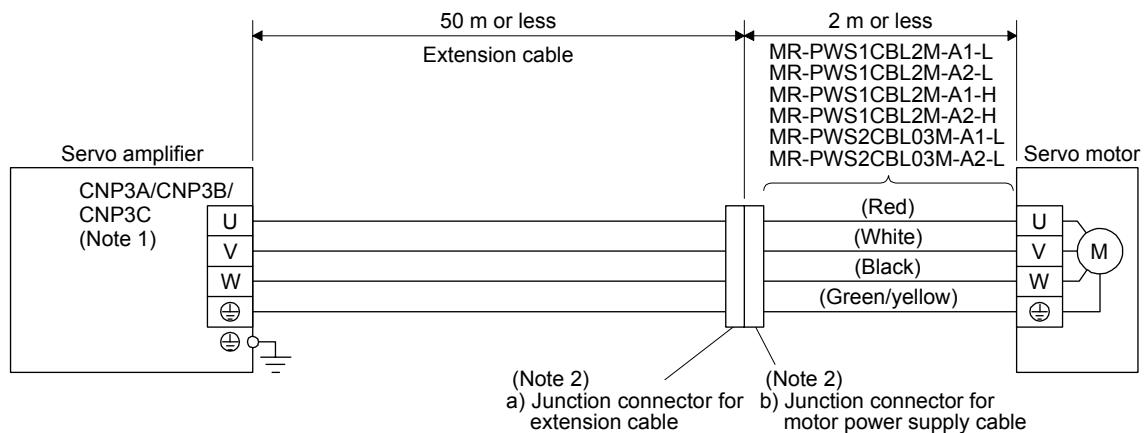

Note. CNP3 is for the MR-J4 3-axis servo amplifier.

2) When cable length exceeds 10 m

When the cable length exceeds 10 m, fabricate an extension cable as shown below. In this case, the motor power supply cable should be within 2 m long.

Refer to section 4.3 for the wire used for the extension cable.

Note 1. CNP3 is for the MR-J4 3-axis servo amplifier.

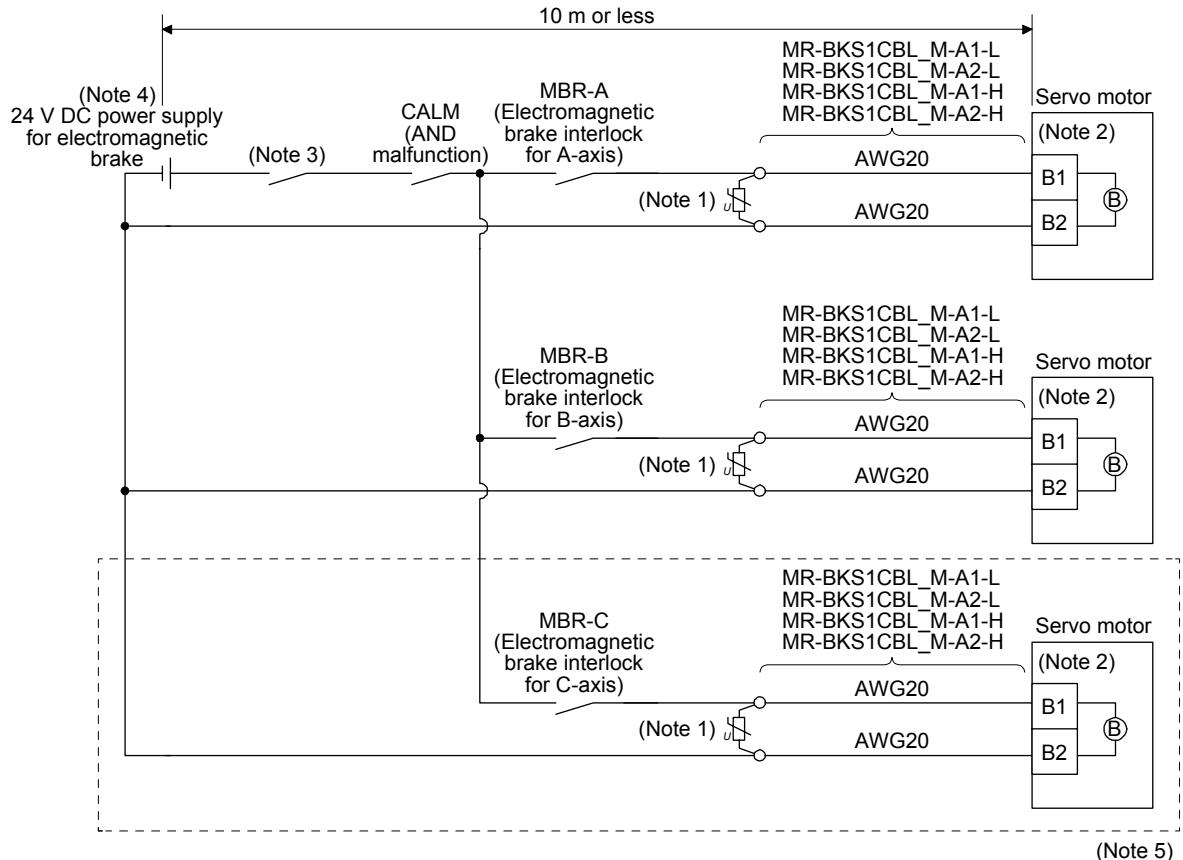

2. Use of the following connectors is recommended when ingress protection (IP65) is necessary.

Junction connector	Description	IP rating
a) Junction connector for extension cable	Connector: RM15WTPZ-4P(71) Cord clamp: JR13WCC-5(72) (Hirose Electric)	IP65 Numeral changes depending on the cable OD.
b) Junction connector for motor power supply cable	Connector: RM15WTJZ-4S(71) Cord clamp: JR13WCC-8(72) (Hirose Electric)	IP65 Numeral changes depending on the cable OD.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(b) Electromagnetic brake cable wiring diagrams

1) When cable length is 10 m or less

- Note
1. Connect a surge absorber as close to the servo motor as possible.
 2. There is no polarity in electromagnetic brake terminals (B1 and B2).
 3. Create the circuit in order to shut off by interlocking with the emergency stop switch.
 4. Do not use the 24 V DC interface power supply for the electromagnetic brake.
 5. This connection is for the MR-J4 3-axis servo amplifier.

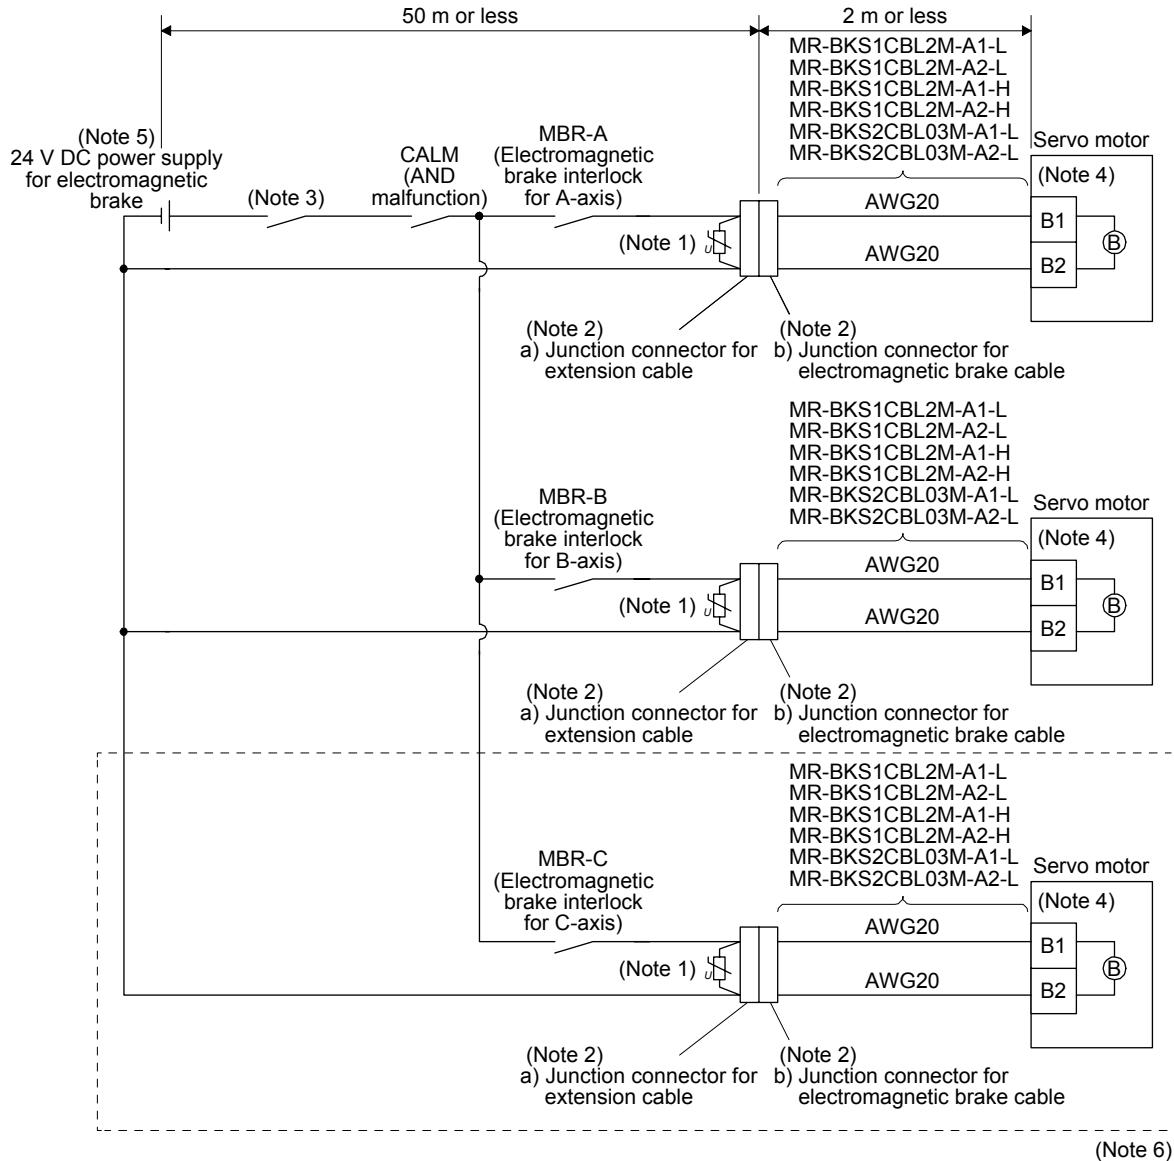

When fabricating the electromagnetic brake cable MR-BKS1CBL_M-H, refer to section 5.4.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

2) When cable length exceeds 10 m

When the cable length exceeds 10 m, fabricate an extension cable as shown below. In this case, the electromagnetic brake cable should be within 2 m.

Refer to section 4.3 for the wire used for the extension cable.

Note 1. Connect a surge absorber as close to the servo motor as possible.

2. Use of the following connectors is recommended when ingress protection (IP65) is necessary.

Junction connector	Description	IP rating
a) Junction connector for extension cable	CM10-CR2P-*(DDK) └ Wire size: S, M, L	IP65
b) Junction connector for electromagnetic brake cable	CMV1-SP2S-*(DDK) └ Wire size: S, M1, M2, L	IP65

3. Create the circuit in order to shut off by interlocking with the emergency stop switch.

4. There is no polarity in electromagnetic brake terminals (B1 and B2).

5. Do not use the 24 V DC interface power supply for the electromagnetic brake.

6. This connection is for the MR-J4 3-axis servo amplifier.

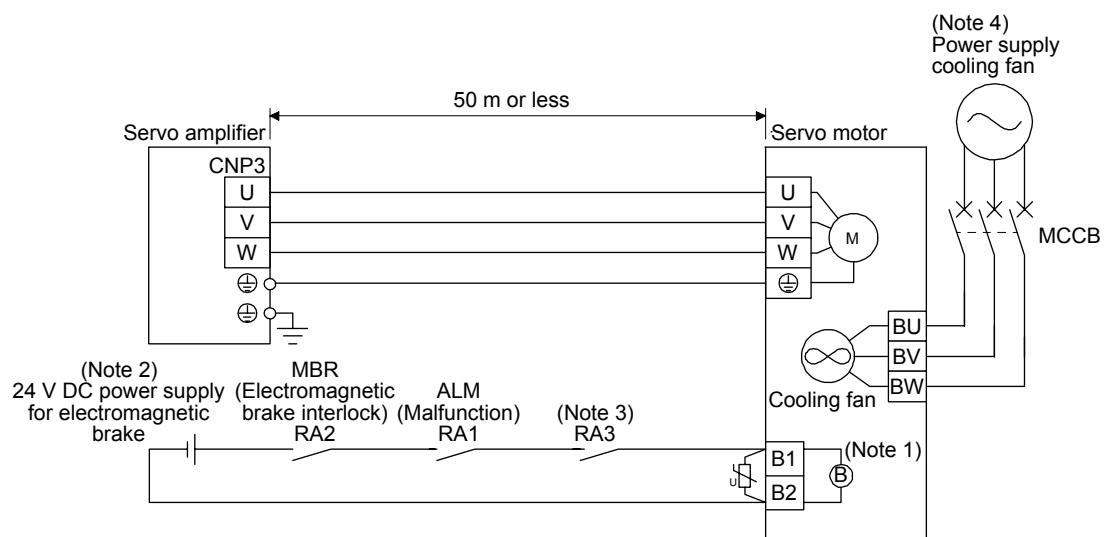

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

4.2.2 HG-SR series/HG-JR series/HG-RR series/HG-UR series servo motor

Refer to section 4.3 for the wires used for wiring.

(1) Wiring diagrams

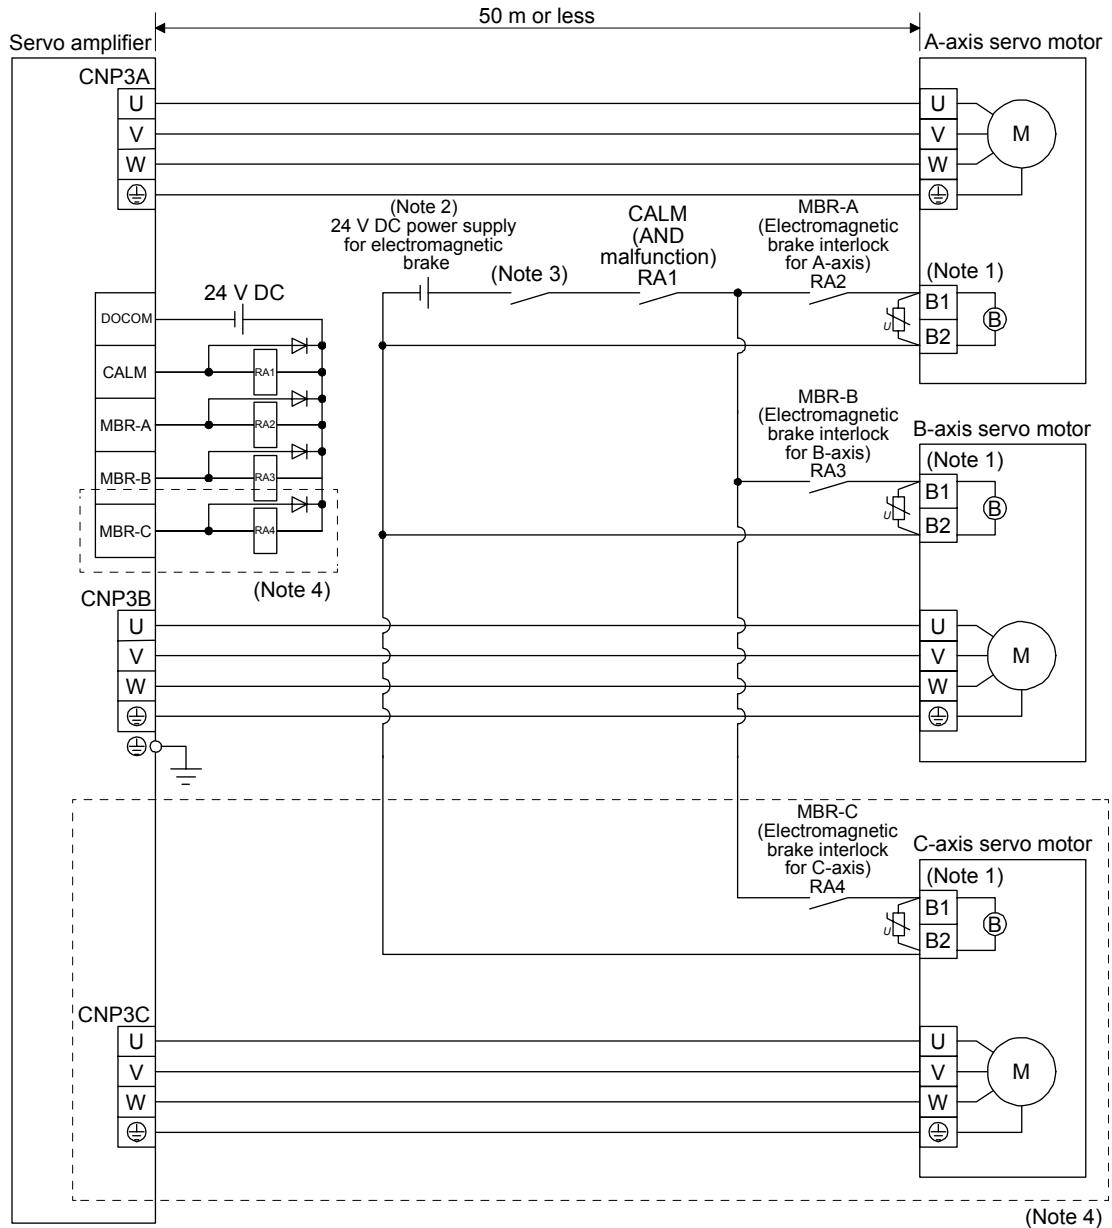

(a) Connection with MR-J4 1-axis servo amplifier

- Note 1. There is no polarity in electromagnetic brake terminals (B1 and B2).
2. Do not use the 24 V DC interface power supply for the electromagnetic brake.
3. Create the circuit in order to shut off by interlocking with the emergency stop switch.
4. Refer to the chapter of the servo motor series for the cooling fan power supply.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(b) Connection with MR-J4 multi-axis servo amplifier

- Note 1. There is no polarity in electromagnetic brake terminals (B1 and B2).
 2. Do not use the 24 V DC interface power supply for the electromagnetic brake.
 3. Create the circuit in order to shut off by interlocking with the emergency stop switch.
 4. This connection is for the MR-J4 3-axis servo amplifier.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(2) Servo motor terminal section

The following table shows the servo motor terminal section. For details of the connectors, refer to (3) of this section. For details of the terminal box, refer to (4) of this section.

The connector fitting the servo motor is prepared as optional equipment. Refer to chapter 5 for details of the options. For types other than those prepared as optional equipment, refer to chapter 3.

(a) HG-SR series

Servo motor	Servo motor terminal section			
	Encoder	Power	Electromagnetic brake	
HG-SR52(4)	Connector A	Connector C	Connector H	
HG-SR102(4)				
HG-SR152(4)		Connector D

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

Connector D

Power supply connector

MS3102A22-22P

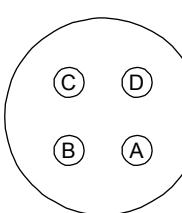

Terminal No.	Signal
A	U
B	V
C	W
D	\ominus (PE)

Connector E

Power supply connector

MS3102A32-17P

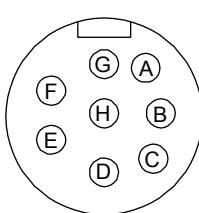

Terminal No.	Signal
A	U
B	V
C	W
D	\ominus (PE)

Connector F

Power supply connector

CE05-2A22-23P

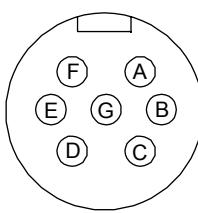

Terminal No.	Signal
A	U
B	V
C	W
D	\ominus (PE)
E	
F	
G	B1 (Note)
H	B2 (Note)

Note. For the motor with an electromagnetic brake, supply electromagnetic brake power (24 V DC). There is no polarity.

Connector G

Power supply connector

CE05-2A24-10P

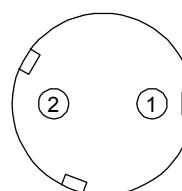

Terminal No.	Signal
A	U
B	V
C	W
D	\ominus (PE)
E	B1 (Note)
F	B2 (Note)
G	

Note. For the motor with an electromagnetic brake, supply electromagnetic brake power (24 V DC). There is no polarity.

Connector H

Electromagnetic brake connector

CMV1-R2P

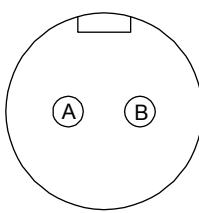

Terminal No.	Signal
1	B1 (Note)
2	B2 (Note)

Note. For the motor with an electromagnetic brake, supply electromagnetic brake power (24 V DC). There is no polarity.

Connector J

Electromagnetic brake connector

MS3102A10SL-4P

Terminal No.	Signal
A	B1 (Note)
B	B2 (Note)

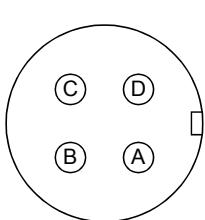

Note. For the motor with an electromagnetic brake, supply electromagnetic brake power (24 V DC). There is no polarity.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

Connector K

Cooling fan connector

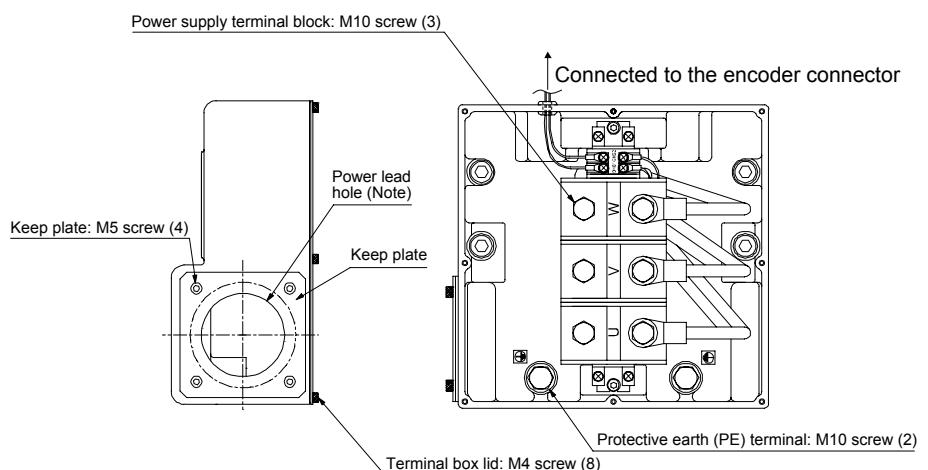

CE05-2A14S-2P

Terminal No.	Signal
A	BU (Note)
B	BV (Note)
C	BW (Note)
D	

Note. Refer to the chapter of the servo motor series for the specifications of the power supplied to the cooling fan.

(4) Terminal box inside (HG-JR22K1M(4))

Note. Provide measures to prevent oil, water, dust and dirt from entering the servo motor through the power lead hole.

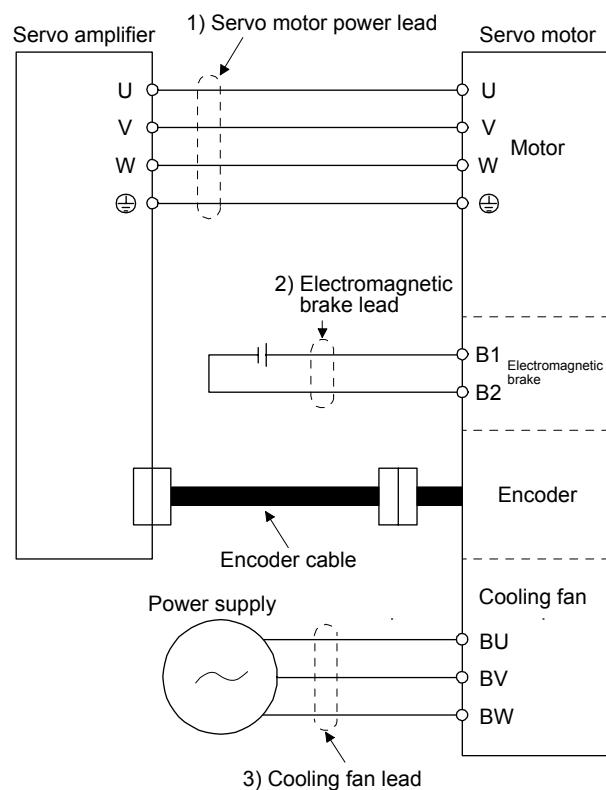

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

4.3 Selection example of wires

POINT

- Wires indicated in this section are separated wires. When using a cable for power line (U, V, and W) between the servo amplifier and servo motor, use a 600 V grade EP rubber insulated chloroprene sheath cab-tire cable (2PNCT). For selection of cables, refer to appendix 6.
- To comply with the UL/CSA standard, use the wires shown in appendix 9 for wiring. To comply with other standards, use a wire that is complied with each standard.
- Selection condition of wire size is as follows.
Construction condition: Single wire set in midair
Wire length: 30 m or less

The following diagram shows the wires used for wiring. Use the wires given in this section or equivalent.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

When using the 600 V Grade heat-resistant polyvinyl chloride insulated wire (HIV wire)
Selection example of wire size when using HIV wires is indicated below.

(1) HG-MR series and HG-KR series

Servo motor	Wires [mm ²]	
	1) U/V/W/ \ominus	2) B1/B2
HG-MR053		
HG-MR13		
HG-MR23		
HG-MR43		
HG-MR73		
HG-KR053		
HG-KR13		
HG-KR23		
HG-KR43		
HG-KR73		

Note. It is for wire length of 10 m or less. When fabricating an extension cable, use 1.25 mm² (AWG 16).

(2) HG-SR series

Servo motor	Wires [mm ²]	
	1) U/V/W/ \ominus	2) B1/B2
HG-SR51	1.25 (AWG 16)	
HG-SR81		
HG-SR121	2 (AWG 14)	
HG-SR201		
HG-SR301	3.5 (AWG 12)	
HG-SR421	5.5 (AWG 10) (Note)	
HG-SR52	1.25 (AWG 16)	
HG-SR102		
HG-SR152	2 (AWG 14)	
HG-SR202		
HG-SR352	3.5 (AWG 12)	
HG-SR502	5.5 (AWG 10) (Note)	
HG-SR702	8 (AWG 8) (Note)	
HG-SR524	1.25 (AWG 16)	
HG-SR1024		
HG-SR1524		
HG-SR2024	2 (AWG 14)	
HG-SR3524		
HG-SR5024	3.5 (AWG 12) (Note)	
HG-SR7024	5.5 (AWG 10) (Note)	

Note. Refer to each servo amplifier instruction manual for crimp terminals and crimping tools used for connection with the servo amplifier.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(3) HG-JR series

Servo motor	Wires [mm ²]		
	1) U/V/W/ \ominus		2) B1/B2
	Standard	When the maximum torque is 400% (Note 2)	
HG-JR53	1.25 (AWG 16)	1.25 (AWG 16)	
HG-JR73			
HG-JR103			
HG-JR153	2 (AWG 14)	2 (AWG 14)	
HG-JR203			
HG-JR353	3.5 (AWG 12)	3.5 (AWG 12) (Note 1)	
HG-JR503	5.5 (AWG 10) (Note 1)	5.5 (AWG 10) (Note 1)	
HG-JR703	8 (AWG 8) (Note 1)		
HG-JR903	14 (AWG 6) (Note 1)		
HG-JR11K1M			
HG-JR15K1M	22 (AWG 4) (Note 1)		
HG-JR22K1M	38 (AWG 2) (Note 1)		
HG-JR534			
HG-JR734	1.25 (AWG 16)	1.25 (AWG 16)	
HG-JR1034			
HG-JR1534		2 (AWG 14)	
HG-JR2034		2 (AWG 14) (Note 1)	
HG-JR3534			
HG-JR5034	3.5 (AWG 12) (Note 1)	3.5 (AWG 12) (Note 1)	
HG-JR7034	5.5 (AWG 10) (Note 1)		
HG-JR9034			
HG-JR11K1M4		8 (AWG 8) (Note 1)	
HG-JR15K1M4			
HG-JR22K1M4	14 (AWG 6) (Note 1)		1.25 (AWG 16)

- Note 1. Refer to each servo amplifier instruction manual for crimp terminals and crimping tools used for connection with the servo amplifier.
2. The maximum torque can be increased to 400% by changing the servo amplifier. Refer to section 8.2 for the combinations.

(4) HG-RR series

Servo motor	Wires [mm ²]	
	1) U/V/W/ \ominus	2) B1/B2
HG-RR103	2 (AWG 14)	
HG-RR153		
HG-RR203	3.5 (AWG 12)	
HG-RR353		
HG-RR503	5.5 (AWG 10) (Note)	1.25 (AWG 16)

Note. Refer to each servo amplifier instruction manual for crimp terminals and crimping tools used for connection with the servo amplifier.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(5) HG-UR series

Servo motor	Wires [mm ²]	
	1) U/V/W/ \oplus	2) B1/B2
HG-UR72	1.25 (AWG 16)	1.25 (AWG 16)
HG-UR152	2 (AWG 14)	
HG-UR202	3.5 (AWG 12)	
HG-UR352	5.5 (AWG 10) (Note)	
HG-UR502		

Note. Refer to each servo amplifier instruction manual for crimp terminals and crimping tools used for connection with the servo amplifier.

4.4 Servo amplifier terminal section

POINT
●For the sizes of wires used for wiring, refer to section 4.3.

To wire to the servo amplifier, use connectors packed with the amplifier or optional connectors.

The following table shows the connectors to be connected to the servo amplifiers. The numbers in the rated output field of the table indicate the symbol filling the underline "_" in the servo amplifier model. For details of the connectors, refer to (1) of this section. For wiring, refer to (2) of this section.

Servo amplifier	Rated output											
	10	20	40	60	70	100	200	350	500	700	11K	15K
MR-J4-_A	Connector A						Connector B		None (terminal block) (Note)			
MR-J4-_A-RJ									None (terminal block) (Note)			
MR-J4-_B									None (terminal block) (Note)			
MR-J4-_B-RJ									None (terminal block) (Note)			
MR-J4-_B-RJ010									None (terminal block) (Note)			
MR-J4-_B-RJ020									None (terminal block) (Note)			

Note. For details on the terminal block, refer to each servo amplifier instruction manual.

Servo amplifier	Rated output							
	60	100	200	350	500	700	11K	15K
MR-J4-_A4	Connector D				None (terminal block) (Note)			
MR-J4-_A4-RJ								
MR-J4-_B4					None (terminal block) (Note)			
MR-J4-_B4-RJ								
MR-J4-_B4-RJ020								

Note. For details on the terminal block, refer to each servo amplifier instruction manual.

Servo amplifier	Rated output (Note)			
	22 (222)	44 (444)	77	1010
MR-J4W2-_B	Connector C			
MR-J4W3-_B				

Note. The numbers in parentheses are for the MR-J4 3-axis servo amplifier.

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(1) Connector details

(a) Connector A

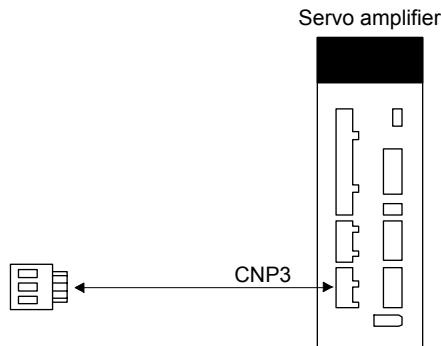

Table 4.1 Connector and applicable wire

Connector	Receptacle assembly	Applicable wire		Stripped length [mm]	Open tool	Manufacturer
		Wire size	Insulator OD			
CNP3	03JFAT-SAXGDK-H7.5	AWG 18 to 14	3.9 mm or less	9	J-FAT-OT	JST

(b) Connector B

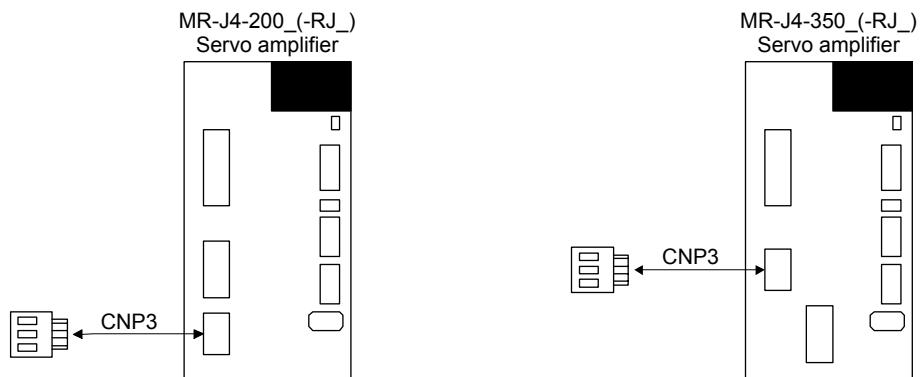

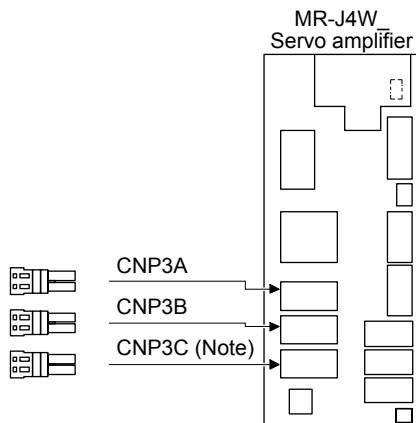

Table 4.2 Connector and applicable wire

Connector	Receptacle assembly	Applicable wire		Stripped length [mm]	Open tool	Manufacturer
		Wire size	Insulator OD			
CNP3	03JFAT-SAXGFK-XL	AWG 16 to 10	4.7 mm or less	11.5	J-FAT-OT-EXL	JST

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

(c) Connector C

Note. This figure shows the MR-J4 3-axis servo amplifier.

Table 4.3 Connector and applicable wire

Connector	Receptacle assembly	Applicable wire size	Stripped length [mm]	Open tool	Manufacturer
CNP3A					
CNP3B					
CNP3C	04JFAT-SAGG-G-KK	AWG 18 to 14	9	J-FAT-OT-EXL	JST

(d) Connector D

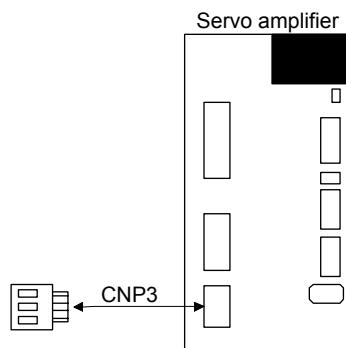

Table 4.4 Connector and applicable wire

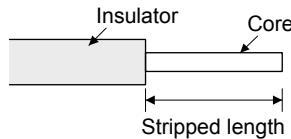

Connector	Receptacle assembly	Applicable wire size		Stripped length [mm]	Open tool	Manufacturer
		Wire size	Insulator OD			
CNP3	03JFAT-SAXGDK-HT10.5	AWG 16 to 14	3.9 mm or less	10	J-FAT-OT-XL	JST

4. CONNECTION OF SERVO AMPLIFIER AND SERVO MOTOR

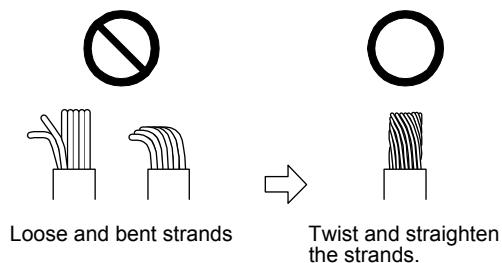

(2) Cable connection procedure

(a) Cable making

Refer to table 4.1 to 4.4 for stripped length of cable insulator. The appropriate stripped length of cables depends on their type, etc. Set the length considering their status.

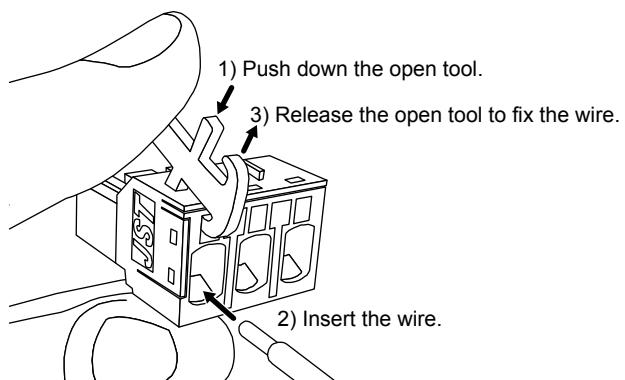

Twist strands slightly and straighten them as follows.

(b) Inserting wire

Insert the open tool as follows and push down it to open the spring. While the open tool is pushed down, insert the stripped wire into the wire insertion hole. Check the insertion depth so that the cable insulator does not get caught by the spring.

Release the open tool to fix the wire. Pull the wire lightly to confirm that the wire is surely connected. The following shows a connection example of the 03JFAT-SAXGFK-XL.

5. WIRING OPTION

5. WIRING OPTION

- Before connecting any option, turn off the power and wait for 15 minutes or more until the charge lamp turns off. Then, confirm that the voltage between P+ and N- is safe with a voltage tester and others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.

- Use specified auxiliary equipment and options. Otherwise, it may cause a malfunction or fire.

POINT

- We recommend using HIV wires to wire the servo amplifiers, servo motors, options, and peripheral equipment. Therefore, recommended wire sizes may different from those of the used wires for the previous servo motors.

5.1 Cable/connector sets

POINT

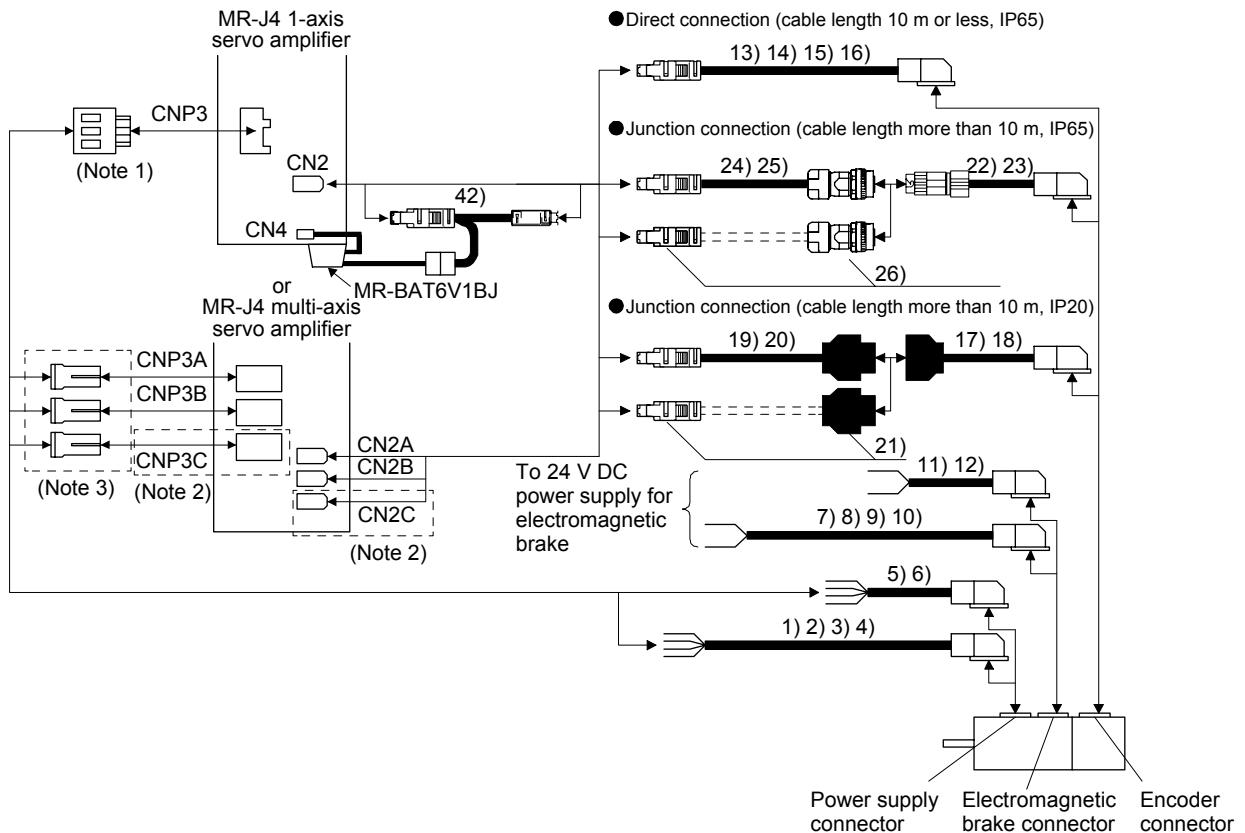

- The IP rating indicated is the cable's or connector's protection against ingress of dust and water when the cable or connector is connected to a servo amplifier or servo motor. If the IP rating of the cable, connector, servo amplifier and servo motor vary, the overall IP rating depends on the lowest IP rating of all components.

Purchase the cable and connector options indicated in this section.

5. WIRING OPTION

5.1.1 Combinations of cable/connector sets

(1) HG-MR series/HG-KR series servo motor

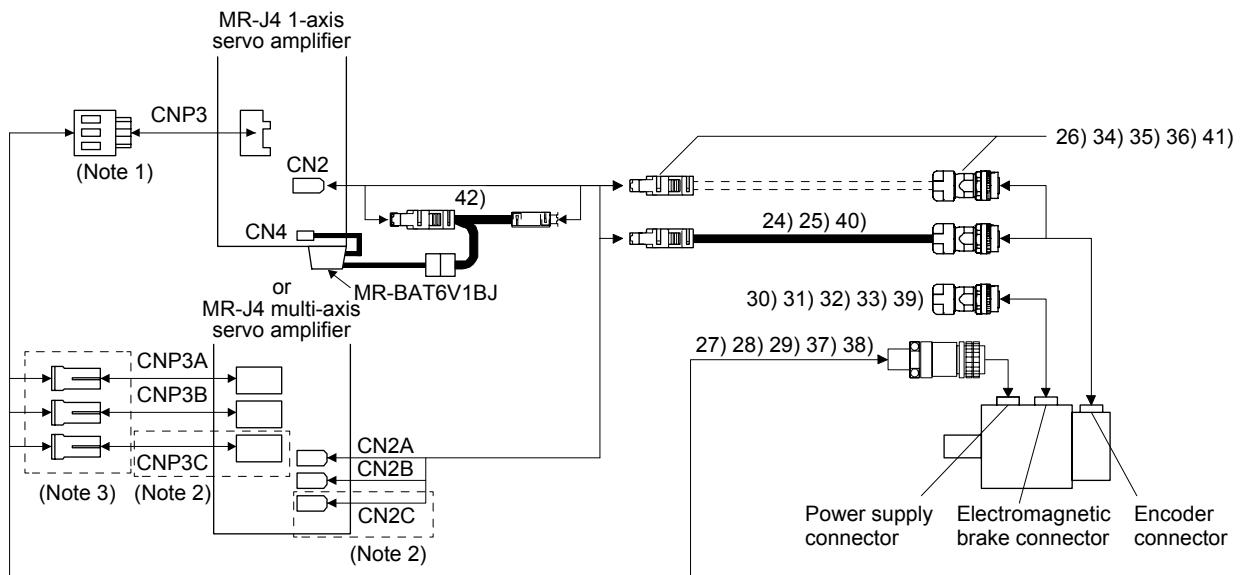

Note 1. Connectors for 3.5 kW or less. For 5 kW or more, it is a terminal block.

2. This connection is for the MR-J4 3-axis servo amplifier.

3. Refer to Appendix 7 for the crimp connector for CNP3_.

(2) HG-SR series/HG-JR53(4) to HG-JR15K1M(4)/HG-RR series/HG-UR series servo motor

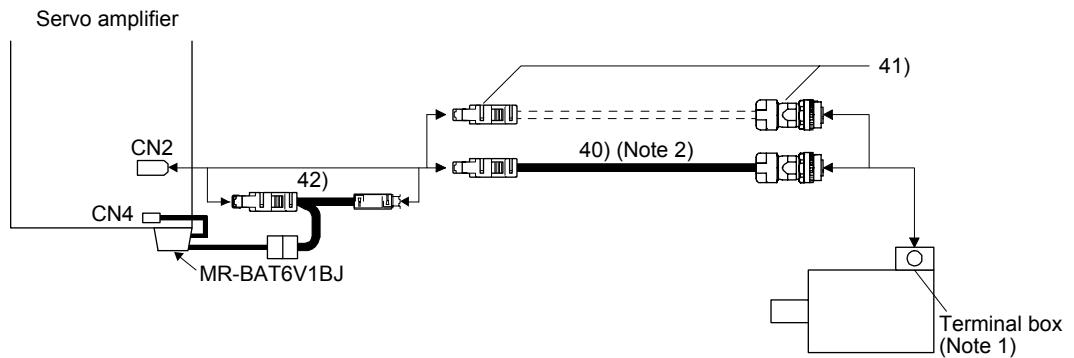

Note 1. Connectors for 3.5 kW or less. For 5 kW or more, it is a terminal block.

2. This connection is for the MR-J4 3-axis servo amplifier.

3. Refer to Appendix 7 for the crimp connector for CNP3_.

5. WIRING OPTION

(3) HG-JR22K1M(4) servo motor

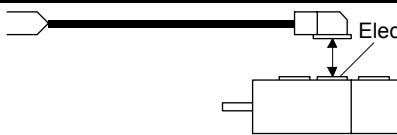

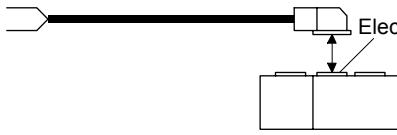

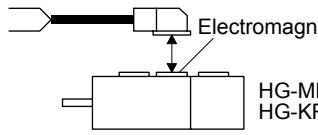

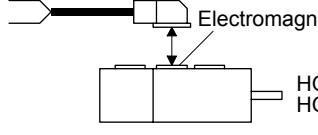

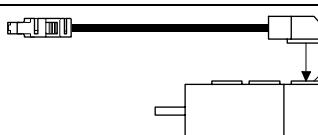

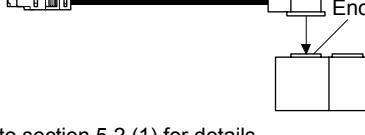

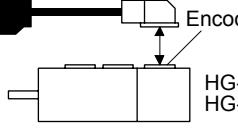

Note 1. Refer to section 3.1 for the connector used for connection of the cooling fan.
2. MR-ENECL_M-H cannot be used.

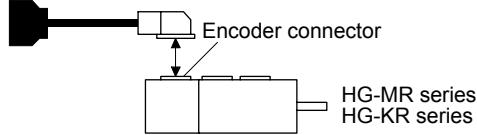

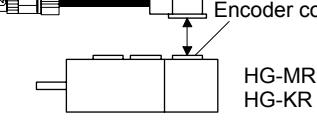

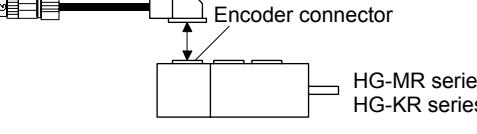

5.1.2 Cable and connector list

No.	Name	Model	Description	Remarks
1)	Servo motor power cable	MR-PWS1CBL_M-A1-L (Note 1, 2) Cable length: 2/5/10 m	Power supply connector HG-MR series HG-KR series	IP65 Load-side lead EN compliant
2)	Servo motor power cable	MR-PWS1CBL_M-A1-H (Note 1) Cable length: 2/5/10 m	Refer to section 5.3 for details.	IP65 Load-side lead Long bending life EN compliant
3)	Servo motor power cable	MR-PWS1CBL_M-A2-L (Note 1, 2) Cable length: 2/5/10 m	Power supply connector HG-MR series HG-KR series	IP65 Opposite to load-side lead EN compliant
4)	Servo motor power cable	MR-PWS1CBL_M-A2-H (Note 1) Cable length: 2/5/10 m	Refer to section 5.3 for details.	IP65 Opposite to load-side lead Long bending life EN compliant
5)	Servo motor power cable	MR-PWS2CBL03M-A1-L (Note 1) Cable length: 0.3 m	Power supply connector HG-MR series HG-KR series	IP55 Load-side lead EN compliant
6)	Servo motor power cable	MR-PWS2CBL03M-A2-L (Note 1) Cable length: 0.3 m	Refer to section 5.3 for details.	IP55 Opposite to load-side lead EN compliant

5. WIRING OPTION

No.	Name	Model	Description	Remarks
7)	Electromagnetic brake cable	MR-BKS1CBL_M-A1-L Cable length: 2/5/10 m		IP65 Load-side lead
8)	Electromagnetic brake cable	MR-BKS1CBL_M-A1-H Cable length: 2/5/10 m	Refer to section 5.4 for details.	IP65 Load-side lead Long bending life
9)	Electromagnetic brake cable	MR-BKS1CBL_M-A2-L Cable length: 2/5/10 m		IP65 Opposite to load-side lead
10)	Electromagnetic brake cable	MR-BKS1CBL_M-A2-H Cable length: 2/5/10 m	Refer to section 5.4 for details.	IP65 Opposite to load-side lead Long bending life
11)	Electromagnetic brake cable	MR-BKS2CBL03M-A1-L Cable length: 0.3 m		IP55 Load-side lead
12)	Electromagnetic brake cable	MR-BKS2CBL03M-A2-L Cable length: 0.3 m		IP55 Opposite to load-side lead
13)	Encoder cable	MR-J3ENCBL_M-A1-L (Note 1) Cable length: 2/5/10 m		IP65 Load-side lead
14)	Encoder cable	MR-J3ENCBL_M-A1-H (Note 1) Cable length: 2/5/10 m	Refer to section 5.2 (1) for details.	IP65 Load-side lead Long bending life

- Note
1. The cable and the connector set may contain different connectors but still usable.
 2. For servo motor power cable, MR-PWS3CBL_M-A_-L using shielded cable is also prepared. For details, contact your local sales office.

5.2 Encoder cable/connector sets

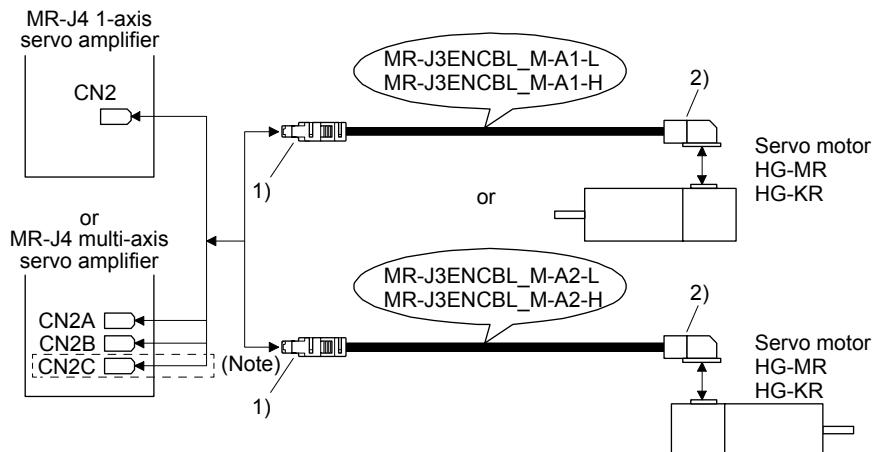

5. WIRING OPTION

(1) MR-J3ENCBL_M_-_-

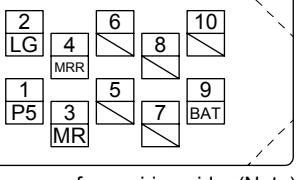

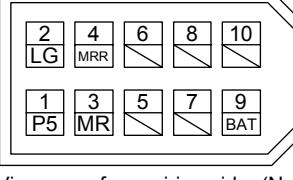

These cables are encoder cables for the HG-MR/HG-KR series servo motors. The numbers in the cable length field of the table indicate the symbol filling the underline "_" in the cable model. The cables of the lengths with the symbols are available.

Cable model	Cable length			IP rating	Bending life	Application
	2 m	5 m	10 m			
MR-J3ENCBL_M-A1-L	2	5	10	IP65	Standard	Load-side lead for HG-MR/HG-KR servo motor
MR-J3ENCBL_M-A1-H	2	5	10		Long bending life	
MR-J3ENCBL_M-A2-L	2	5	10	IP65	Standard	Opposite to load-side lead for HG-MR/HG-KR servo motor
MR-J3ENCBL_M-A2-H	2	5	10		Long bending life	

(a) Connection of servo amplifier and servo motor

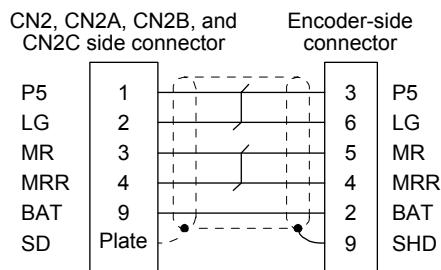

Note. This connection is for the MR-J4 3-axis servo amplifier.

Cable model	1) CN2, CN2A, CN2B, and CN2C side connector	2) Encoder-side connector
MR-J3ENCBL_M-A1-L	Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M or equivalent)	Connector set: 54599-1019 (Molex)
MR-J3ENCBL_M-A1-H	 View seen from wiring side. (Note)	Connector: 2174053-1 Crimping tool for ground clip: 1596970-1 Crimping tool for receptacle contact: 1596847-1 (TE Connectivity)
MR-J3ENCBL_M-A2-L		
MR-J3ENCBL_M-A2-H	Note. Keep open the pins shown with . Especially, pin 10 is provided for manufacturer adjustment. If it is connected with any other pin, the servo amplifier cannot operate normally.	 View seen from wiring side. (Note)

5. WIRING OPTION

(b) Cable internal wiring diagram

(2) MR-EKCBM_M_-

POINT
●The following encoder cables are of four-wire type.
MR-EKCBM30M-L
MR-EKCBM30M-H
MR-EKCBM40M-H
MR-EKCBM50M-H
When using any of these encoder cables, select "four-wire type" referring each servo amplifier instruction manual.
If the setting is incorrect, [AL. 16 Encoder initial communication error 1] or [AL. 16 Encoder error 1] occurs.

The servo amplifier and the servo motor cannot be connected by these cables alone. The servo motor-side encoder cable (MR-J3JCBL03M_-L) is required.

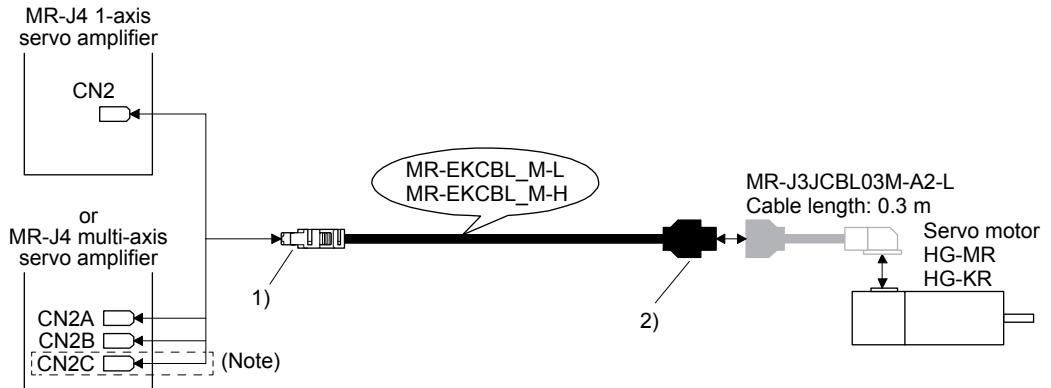

The numbers in the cable length field of the table indicate the symbol filling the underline "_" in the cable model. The cables of the lengths with the symbols are available.

Cable model	Cable length				IP rating	Bending life	Application
	20 m	30 m	40 m	50 m			
MR-EKCBM_M-L	20	(Note) 30			IP20	Standard	For HG-MR/HG-KR servo motor Use in combination with MR-J3JCBL03M_-L.
MR-EKCBM_M-H	20	(Note) 30	(Note) 40	(Note) 50	IP20	Long bending life	

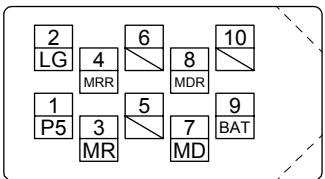

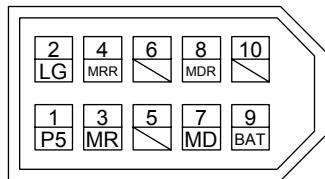

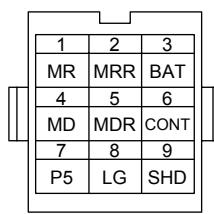

Note. Four-wire type cable

5. WIRING OPTION

(a) Connection of servo amplifier and servo motor

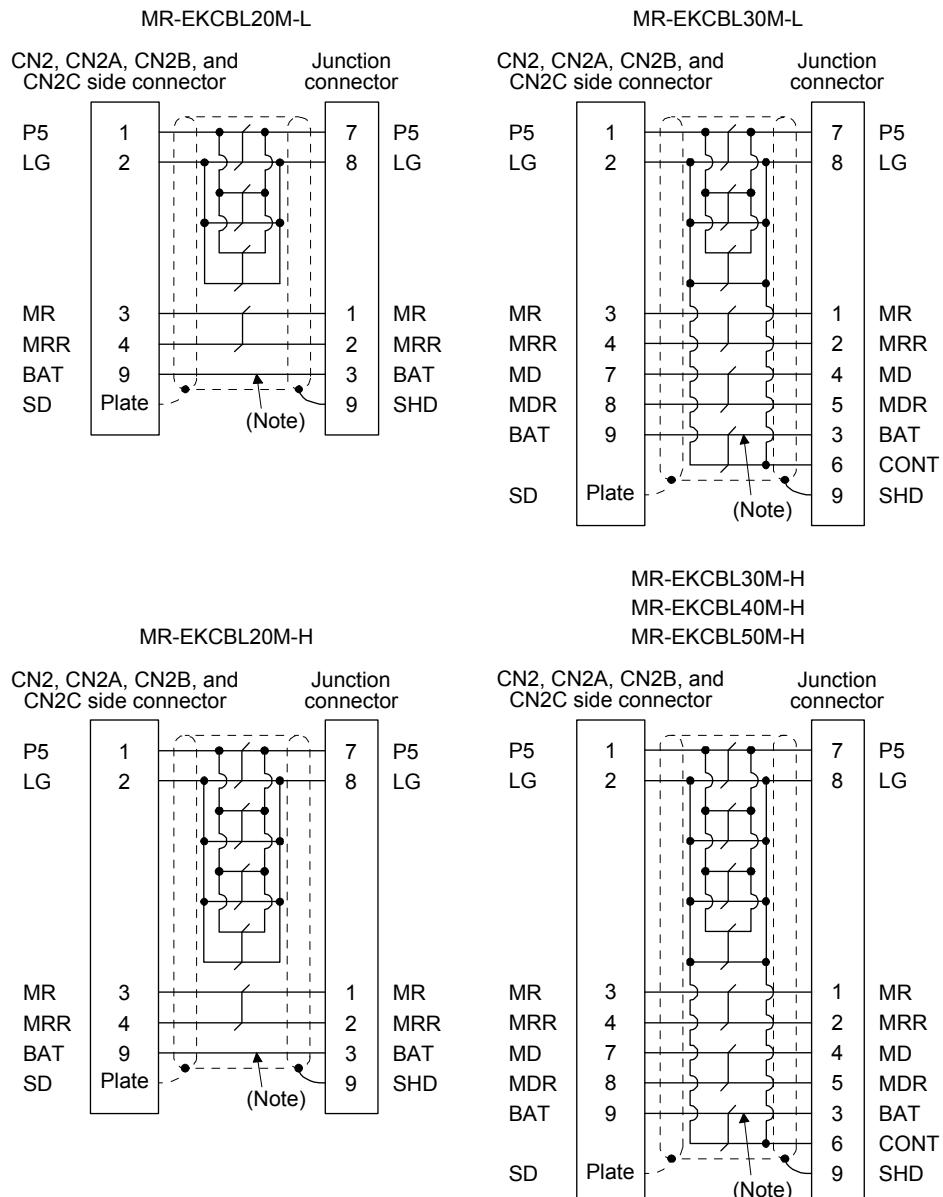

Note. This connection is for the MR-J4 3-axis servo amplifier.

Cable model	1) CN2, CN2A, CN2B, and CN2C side connector	2) Junction connector

MR-EKCBM_M-H	 View seen from wiring side. (Note)  View seen from wiring side. (Note) Note. Keep open the pins shown with . Especially, pin 10 is provided for manufacturer adjustment. If it is connected with any other pin, the servo amplifier cannot operate normally.	 View seen from wiring side.

5. WIRING OPTION

(b) Internal wiring diagram

Note. Always make connection for use in an absolute position detection system. Wiring is not necessary for use in an incremental system.

When fabricating the cable, use the wiring diagram corresponding to the length indicated below.

Cable bending life	Applicable wiring diagram	
	Less than 30 m	30 m to 50 m
Standard	MR-EKCB20M-L	MR-EKCB30M-L
Long bending life	MR-EKCB20M-H	MR-EKCB30M-H MR-EKCB40M-H MR-EKCB50M-H

5. WIRING OPTION

(c) When fabricating the encoder cable

When fabricating the cable, prepare the following parts, and fabricate it according to the wiring diagram in (b). Refer to section 5.5 for the specifications of the cable to use.

Parts	Description	
Connector set MR-ECNM  CN2, CN2A, CN2B, and CN2C side connector Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M) or Connector set: 54599-1019 (Molex)	Encoder-side connector Housing: 1-172161-9 Connector pin: 170359-1 (TE Connectivity or equivalent) Cable clamp: MTI-0002 (Toa Electric Industrial)	

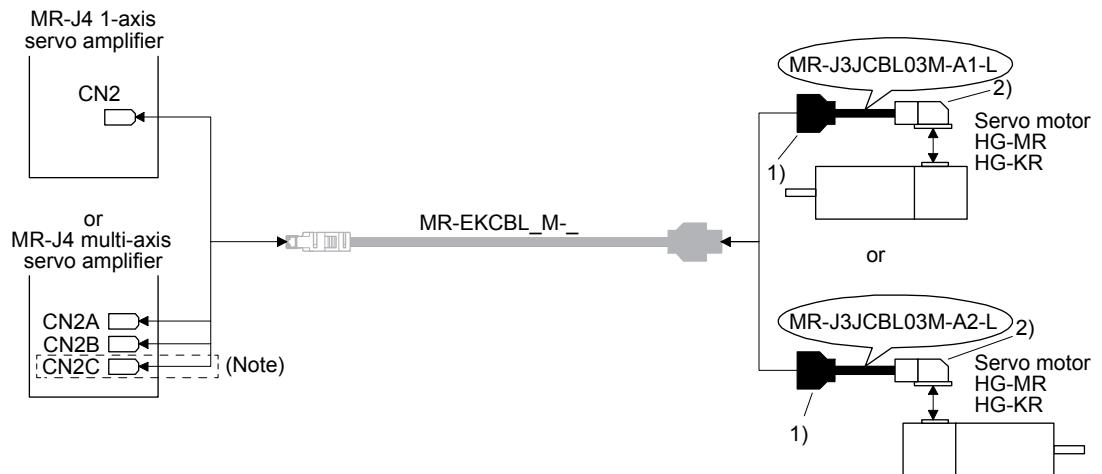

(3) MR-J3JCBL03M_-L

The servo amplifier and the servo motor cannot be connected by these cables alone. The servo motor-side encoder cable (MR-EKCBL_M_-) is required.

Cable model	Cable length	IP rating	Bending life	Application
MR-J3JCBL03M-A1-L	0.3 m	IP20	Standard	Load-side lead for HG-MR/HG-KR servo motor Use in combination with MR-EKCBL_M_-.
MR-J3JCBL03M-A2-L				Opposite to load-side lead for HG-MR/HG-KR servo motor Use in combination with MR-EKCBL_M_-.

MR-ENECL50M-H-MTH

Note 1. Always make connection for use in an absolute position detection system. Wiring is not necessary for use in an incremental system.

2. Always make connection for use with HG-JR22K1M(4). Wiring is not necessary for use with a servo motor other than HG-JR22K1M(4).

5. WIRING OPTION

(c) When fabricating the encoder cable

When fabricating the cable, prepare the following parts, and fabricate it according to the wiring diagram in (b). Refer to section 5.5 for the specifications of the cable to use.

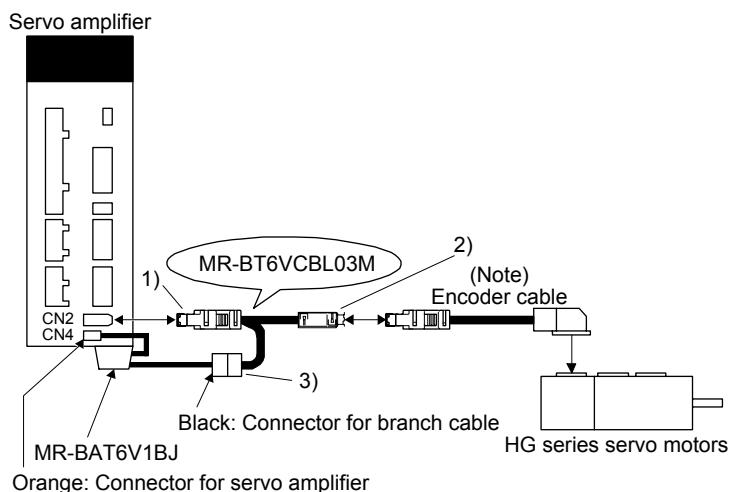

Parts (Connector set)	Description	
	Servo amplifier-side connector	Encoder-side connector (DDK)
MR-ENECS	 Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M) or Connector set: 54599-1019 (Molex)	 Plug: D/MS3106A20-29S(D190) Cable clamp: CE3057-12A-3-D Backshell: CE02-20BS-S-D

(7) MR-BT6VCBL03M

This cable is a battery connection cable. Using this cable with an MR-BAT6V1BJ enables to hold absolute position data recorded in the encoder even if they are disconnected from the servo amplifier. Additionally, you can change the battery with the control circuit power supply off. For details, refer to each servo amplifier instruction manual.

Cable model	Cable length	Application
MR-BT6VCBL03M	0.3 m	For HG-MR/HG-KR/HG-SR/HG-JR/HG-RR/HG-UR series servo motor

Connection of servo amplifier and servo motor

Note. For the encoder cable, refer to (1) to (6) of this section.

Cable model	1) CN2-side connector	2) Junction connector	3) Battery connector
MR-BT6VCBL03M	Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M) or Connector set: 54599-1019 (Molex)	Plug: 36110-3000FD Shell kit: 36310-F200-008 (3M)	Connector: DF3-2EP-2C Contact: DF3-EP2428PCFA (Hirose Electric)

5. WIRING OPTION

5.3 Servo motor power cable

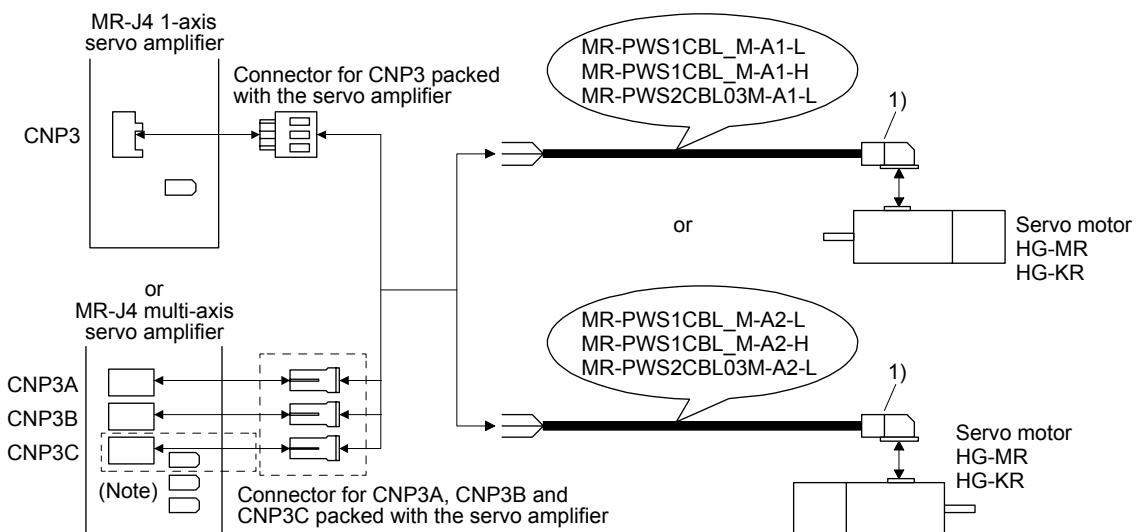

These cables are servo motor power cables for the HG-MR/HG-KR series servo motors.

The numbers in the cable length field of the table indicate the symbol filling the underline "_" in the cable model. The cables of the lengths with the symbols are available.

Refer to section 4.2.1 for wiring.

Cable model	Cable length				IP rating	Bending life	Application
	0.3 m	2 m	5 m	10 m

Note 1. The following shows the detail of d.

2. Standard OD. Max. OD is about 10% greater.
3. Purchase from Toa Electric Industrial Co. Ltd., Nagoya Branch
4. Purchase from Taisei Co., Ltd.
5. These models consist with solid wires. Specify the color, separately.

MEMO

6. HG-MR SERIES/HG-KR SERIES

6. HG-MR SERIES/HG-KR SERIES

This chapter provides information on the servo motor specifications and characteristics. When using the HG-MR/HG-KR series servo motor, always read the Safety Instructions in the beginning of this manual and chapters 1 to 5, in addition to this chapter.

6.1 Model code definition

The following describes what each block of a model name indicates. Not all combinations of the symbols are available.

HG-KR13B JG1D		Appearance	
Series		Shaft type	
HG-MR		Symbol	
HG-KR		Shaft shape	
HG-MR_HG-KR		053 to 73	
(Note 1) K		Standard (straight shaft)	
(Note 1) D		Keyway shaft (with key)	
053/13		23 to 73	
Rated output		Reducer	
Symbol		Symbol	
05		Reducer	
1		None	
2		G1 For general industrial machine (flange-mounting)	
4		G5 Flange-mounting flange output type for high precision application	
7		G7 Flange-mounting shaft output type for high precision application	
Rated speed		Oil seal	
3000 [r/min]		Symbol	
Electromagnetic brake		Symbol	
Symbol		Oil seal	
None		None	
B		(Note 2) J	
With		With	

- Note 1. The special shaft applies to the standard servo motor and servo motor with an electromagnetic brake. However, the key shaft (with key) also applies to the servo motor with flange-mounting shaft output type reducer for high precision application.
2. The servo motors with an oil seal are available as optional products. For details, contact your local sales office.

6. HG-MR SERIES/HG-KR SERIES

6.2 Combination list of servo motors and servo amplifiers

6. HG-MR SERIES/HG-KR SERIES

- Note
- When the power supply voltage drops, the output and the rated speed cannot be guaranteed.
 - If the load to motor inertia ratio exceeds the indicated value, contact your local sales office.
 - Refer to the dimensions for the geared servo motor.
 - Except for the shaft-through portion.
 - In the environment where the servo motor is exposed to oil mist, oil, or water, the servo motor of the standard specifications may not be usable. Please contact your local sales office.
 - The following figure shows the vibration directions. The value is the one at the part that indicates the maximum value (normally the opposite to load-side bracket). When the servo motor stops, fretting is likely to occur at the bearing. Therefore, suppress the vibration to about half of the permissible value. Note that this does not apply to the geared servo motor.

- V10 indicates that the amplitude of a single servo motor is 10 μm or less. The following figure shows the servo motor mounting position for measurement and the measuring position.

- The following shows permissible load for the shaft. Do not subject the shaft to load greater than the value in the specifications list. The value assumes that the load is applied independently.

- For the geared servo motor, the reducer area is IP44-equivalent.
- Refer to section 6.6 for the geared servo motor.
- The servo motors with an oil seal are available as optional products. For details, contact your local sales office.

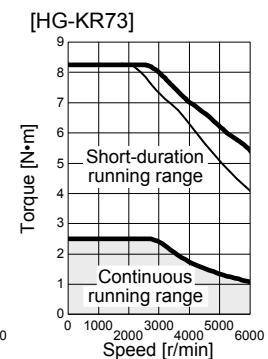

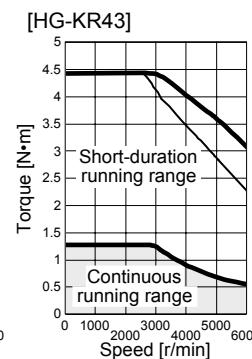

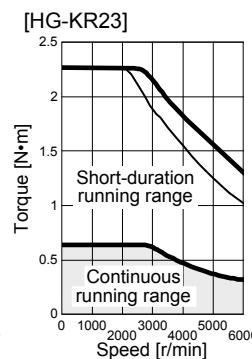

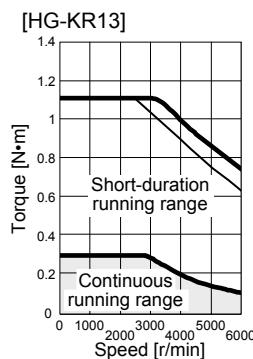

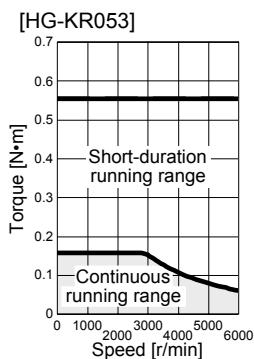

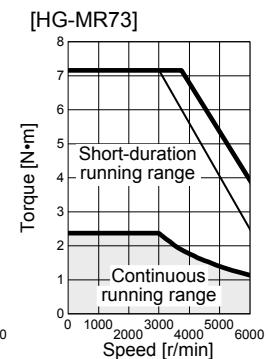

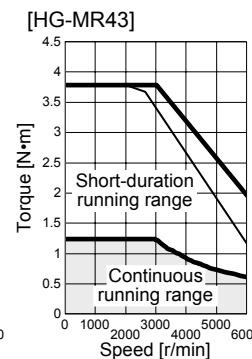

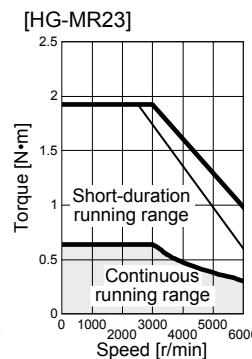

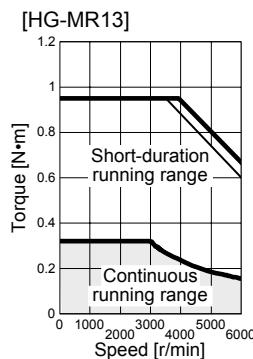

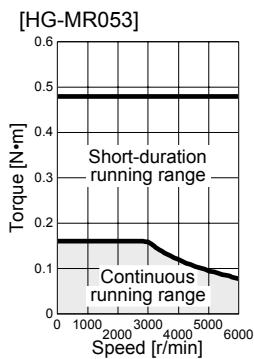

6. HG-MR SERIES/HG-KR SERIES

6.3.2 Torque characteristics

POINT

- For the system where the unbalanced torque occurs, such as a vertical axis system, it is recommended that the unbalanced torque of the machine be kept at 70% or less of the motor's rated torque.

When the power supply input of the servo amplifier is 3-phase 200 V AC or 1-phase 230 V AC, the torque characteristic is indicated by the heavy line. For the 1-phase 200 V AC power supply, part of the torque characteristic is indicated by the thin line.

6. HG-MR SERIES/HG-KR SERIES

6.4 Electromagnetic brake characteristics

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).

- Before performing the operation, be sure to confirm that the electromagnetic brake operates properly.
- The operation time of the electromagnetic brake differs depending on the power supply circuit you use. Be sure to check the operation delay time with a real machine.

The characteristics of the electromagnetic brake provided for the servo motor with an electromagnetic brake are indicated below.

Item	Servo motor HG-MR Series/HG-KR Series				
	053B	13B	23B	43B	73B
Type (Note 1)	Spring actuated type safety brake				
Rated voltage (Note 4)	24 V DC ⁰ _{-10%}				
Power consumption [W] at 20 °C	6.3	7.9	10		
Coil resistance (Note 6) [Ω]	91.0	73.0	57.0		
Inductance (Note 6) [H]	0.15	0.18	0.13		
Brake static friction torque [N·m]	0.32	1.3	2.4		
Release delay time (Note 2) [s]	0.03	0.03	0.04		
Braking delay time (Note 2) [s]	DC off	0.01	0.02	0.02	
Permissible braking work	Per braking [J]	5.6	22	64	
	Per hour [J]	56	220	640	
Brake looseness at servo motor shaft (Note 5) [degrees]		2.5	1.2	0.9	
Brake life (Note 3)	Number of brakings [times]	20000			
	Work per braking [J]	5.6	22	64	
Selection example of surge absorbers to be used (Note 7, 8)	For the suppressed voltage 125 V	TND20V-680KB			
	For the suppressed voltage 350 V	TND10V-221KB			

- Note
1. There is no manual release mechanism. When it is necessary to hand-turn the servo motor shaft for machine centering, etc., use a separate 24 V DC power supply to release the brake electrically.
 2. The value for initial gap at 20 °C.
 3. The brake gap will increase as the brake lining wears, but the gap is not adjustable.
The brake life indicated is the number of braking cycles after which adjustment will be required.
 4. Always prepare a power supply exclusively used for the electromagnetic brake.
 5. These are initial values. These are not guaranteed values.
 6. These values are measured values and not guaranteed values.
 7. Select the electromagnetic brake control relay properly, considering the characteristics of the electromagnetic brake and surge absorber. When you use a diode for a surge absorber, the electromagnetic braking time will be longer.
 8. Manufactured by Nippon Chemi-Con Corporation.

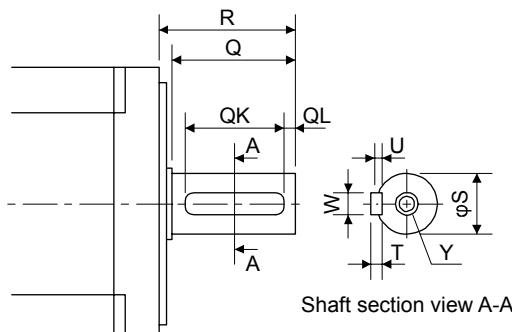

6. HG-MR SERIES/HG-KR SERIES

6.5 Servo motors with special shafts

The servo motors with special shafts indicated by the symbols (K and D) in the table are available. K and D are the symbols included in the servo motor model names. Refer to section 6.6.2 (4) for geared servo motors with special shaft.

Servo motor	Shaft shape	
	Key shaft (with key)	D cut shaft
HG-MR053(B)_		
HG-MR13(B)_		
HG-KR053(B)_		D
HG-KR13(B)_

6. HG-MR SERIES/HG-KR SERIES

6.6 Geared servo motors

●For the geared servo motor, transport it in the same status as in the installation method. Tipping it over can cause oil leakage.

POINT

●Geared servo motors are not included in the HG-MR series.

Servo motors are available with a reducer designed for general industrial machines and high precision applications.

Servo motors with an electromagnetic brake are also available.

6.6.1 For general industrial machines (G1)

(1) Reduction ratio

The following table indicates the reduction ratios and actual reduction ratios of the geared servo motor for general industrial machines.

Servo motor	Nominal reduction ratio	Actual reduction ratio
HG-KR053(B)G1	1/5	9/44
	1/12	49/576
	1/20	25/484
HG-KR13(B)G1	1/5	9/44
	1/12	49/576
	1/20	25/484
HG-KR23(B)G1	1/5	19/96
	1/12	961/11664
	1/20	513/9984
HG-KR43(B)G1	1/5	19/96
	1/12	961/11664
	1/20	7/135
HG-KR73(B)G1	1/5	1/5
	1/12	7/87
	1/20	625/12544

6. HG-MR SERIES/HG-KR SERIES

(2) Specifications

Item	Description				
Mounting method	Flange mounting				
Mounting direction	In any directions				
Lubrication method	Grease lubrication (already packed)				
Packed with	50 W/100 W Mobilplex 46 Exxon Mobil	200 W/400 W 1/12, 1/20 Molynoc AP2 JX Nippon Oil & Energy	750 W 1/12	200 W/400 W 1/5	750 W 1/5, 1/20 Mobil Grease SP Exxon Mobil
Output shaft rotating direction	Same as the servo motor output shaft direction.				
Backlash (Note 3)	60 minutes or less at reducer output shaft				
Permissible load inertia moment ratio (converted into equivalent value on servo motor shaft) (Note 1)	50 W/100 W/750 W: 5 times or less 200 W/400 W: 7 times or less				
Maximum torque	Three times of the servo motor rated torque				
Maximum speed (at servo motor shaft)	4500 r/min (permissible instantaneous speed: 5175 r/min)				
IP rating (reducer area)	IP44 equivalent				
Reducer efficiency (Note 2)	45% to 75%				

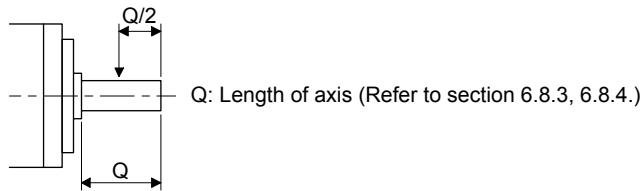

Note 1. If the above indicated value is exceeded, please contact your local sales office.

2. The reducer efficiency differs depending on the reduction ratio. Also, it changes depending on the operating conditions such as the output torque, speed and rotation, temperature, etc. The numerical value in the table is a typical value in the rated torque, rated speed and rotation and typical temperature, and not a guaranteed value.
3. The backlash can be converted: 1 min = 0.0167 °

6. HG-MR SERIES/HG-KR SERIES

(3) Permissible loads of servo motor shaft

The permissible radial load in the table is the value measured at the center of the reducer output shaft.

Servo motor	Reduction ratio	Permissible load (Note)	
		Permissible radial load [N]	Permissible thrust load [N]
HG-KR053(B)G1	1/5	150	200
	1/12	240	320
	1/20	370	450
HG-KR13(B)G1	1/5	150	200
	1/12	240	320
	1/20	370	450
HG-KR23(B)G1	1/5	330	350
	1/12	710	720
	1/20	780	780
HG-KR43(B)G1	1/5	330	350
	1/12	710	720
	1/20	760	760
HG-KR73(B)G1	1/5	430	430
	1/12	620	620
	1/20	970	960

Note. Do not subject the shaft to load greater than the value.

The value in the table assumes that the load is applied independently.

6. HG-MR SERIES/HG-KR SERIES

6.6.2 For high precision applications (G5/G7)

(1) Reduction ratio

The symbols (11B, 14A, 20A, and 32A) in the following table indicate the model numbers of the reducers assembled to the servo motors. Servo motors with a reducer having the indicated reduction gear model numbers are available. The reducer model number indicates ___ of the reducer model HPG-___-05.

Servo motor	Reduction ratio					
	1/5	1/9	1/11	1/21	1/33	1/45
HG-KR053(B)G5 HG-KR053(B)G7	11B/14A	11B	14A		20A	
HG-KR13(B)G5 HG-KR13(B)G7	11B/14A	14A	14A		20A	
HG-KR23(B)G5 HG-KR23(B)G7	14A		14A	20A		32A
HG-KR43(B)G5 HG-KR43(B)G7	14A		20A		32A	
HG-KR73(B)G5 HG-KR73(B)G7	20A		20A	32A		

(2) Specifications

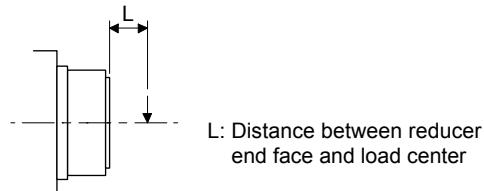

Item	Description	
Mounting method	Flange mounting	
Mounting direction	In any directions	
Lubrication method	Grease lubrication (already packed)	
Packed with	Harmonic grease SK-2 (Harmonic Drive Systems)	
Output shaft rotating direction	Same as the servo motor output shaft direction.	
Backlash (Note 3)	3 minutes or less at reducer output shaft	
Permissible load inertia moment ratio (when converting into the servo motor shaft) (Note 1)	50 W/100 W/750 W: 10 times or less 200 W/400 W: 14 times or less	
Maximum torque	Three times of the servo motor rated torque	
Maximum speed (servo motor shaft)	6000 r/min (permissible instantaneous speed: 6900 r/min)	
IP rating (reducer area)	IP44 equivalent	
Reducer efficiency (Note 2)	50 W (reducer model No. 14A): 22% to 41% 50 W (reducer model No. 11B)/100 W/200 W/400 W/750 W: 58% to 87%	

- Note 1. If the above indicated value is exceeded, please contact your local sales office.
2. The reducer efficiency differs depending on the reduction ratio. Also, it changes depending on the operating conditions such as the output torque, speed and rotation, temperature, etc. The numerical value in the table is a typical value in the rated torque, rated speed and rotation and typical temperature, and not a guaranteed value.
3. The backlash can be converted: 1 min = 0.0167 °

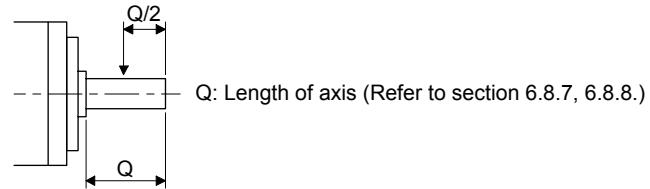

6. HG-MR SERIES/HG-KR SERIES

(3) Permissible loads of servo motor shaft

The radial load point of a high precision reducer is as shown below.

Flange-mounting flange output type for high precision application (G5)

Flange-mounting shaft output type for high precision application (G7)

Servo motor	Reduction ratio	Reducer model number	Permissible load (Note)		
			Radial load point L [mm]	Permissible radial load [N]	Permissible thrust load [N]

	20A	42	25h7	8	7	36	4	M6 screw hole depth 12
	32A	82	40h7	12	8	70	5	M10 screw hole depth 20

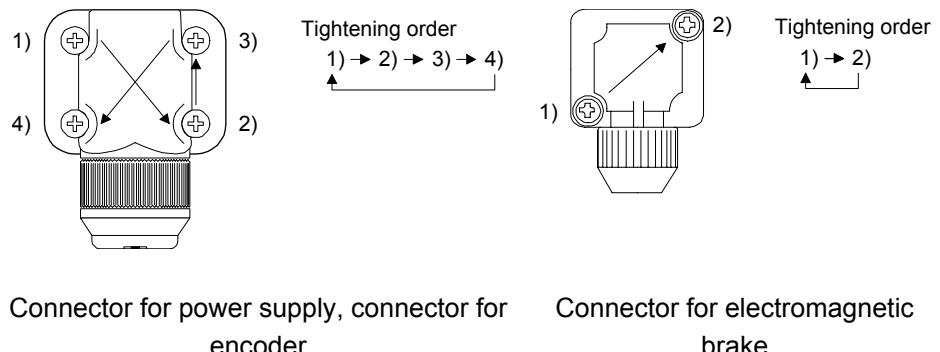

6. HG-MR SERIES/HG-KR SERIES

6.7 Mounting connectors

If the connector is not fixed securely, it may come off or may not produce a splash-proof effect during operation.

To achieve the IP rating IP65, pay attention to the following points and install the connectors.

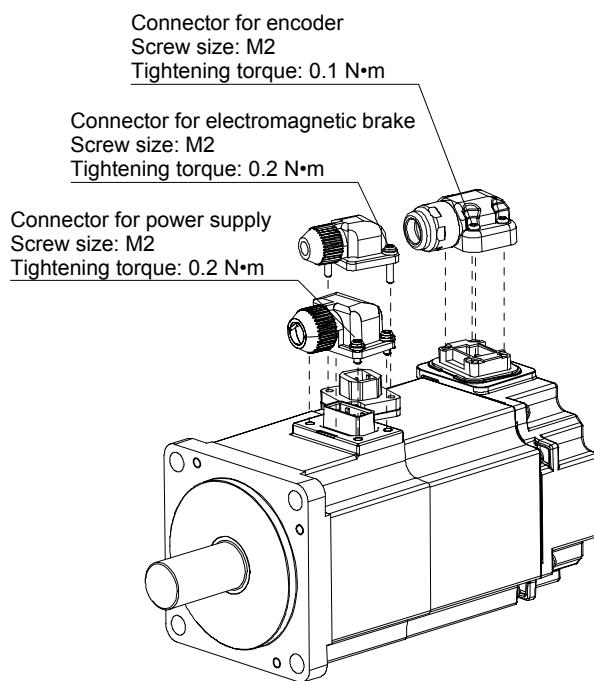

- (1) When screwing the connector, hold the connector still and gradually tighten the screws in a crisscross pattern.

Connector for power supply, connector for
encoder

Connector for electromagnetic
brake

- (2) Tighten the screws evenly. Tightening torques are as indicated below.

- (3) The servo motor fitting part of each connector is provided with a splash-proof seal (O ring). When mounting a connector, use care to prevent the seal (O ring) from dropping and being pinched. If the seal (O ring) has dropped or is pinched, a splash-proof effect is not produced.

6. HG-MR SERIES/HG-KR SERIES

6.8 Dimensions

Moment of inertia on the table is the value calculated by converting the total value of moment of inertia for servo motor, reducer, and electromagnetic brake with servo motor shaft.

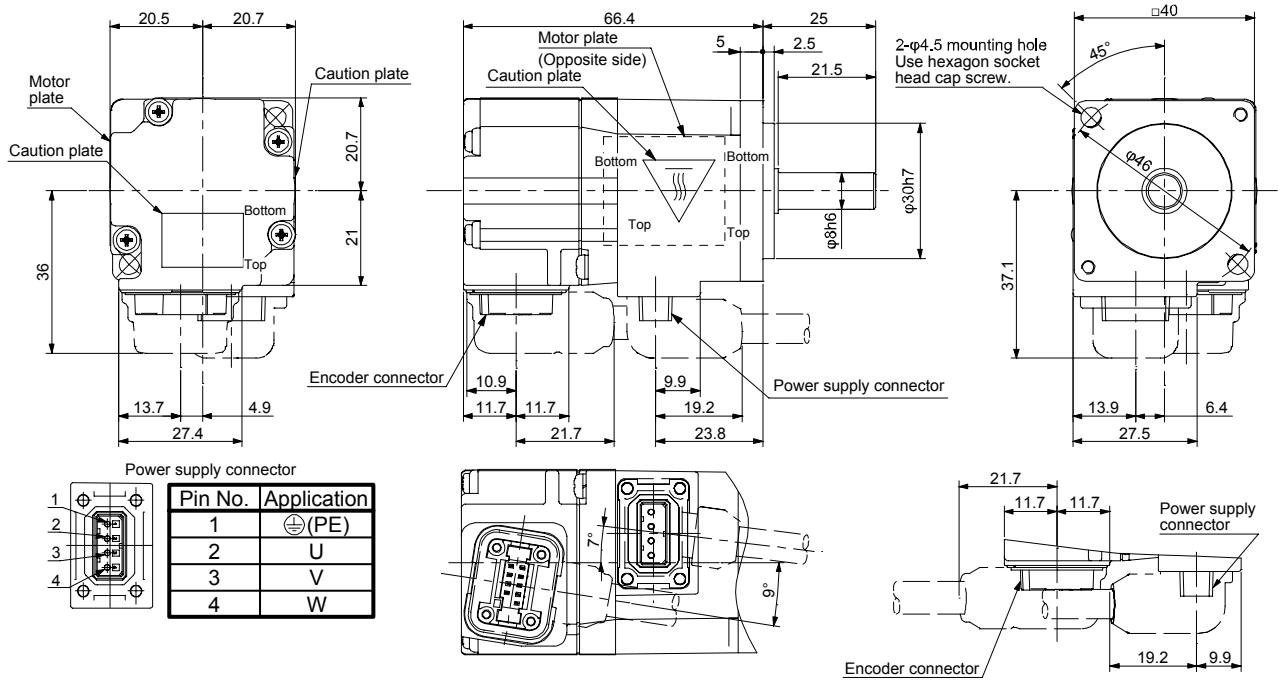

When running the cables to the load side, take care to avoid interference with the machine. The dimensions without tolerances are general tolerance.

The outer frame of the reducer is a material surface such as casting. Its actual dimensions may be 1 mm to 3 mm larger than the drawing dimensions. Design the machine-side with allowances.

6.8.1 Standard (without electromagnetic brake and reducer)

7. HG-SR SERIES

7. HG-SR SERIES

This chapter provides information on the servo motor specifications and characteristics. When using the HG-SR series servo motor, always read the Safety Instructions in the beginning of this manual and chapters 1 to 5, in addition to this chapter.

7.1 Model code definition

The following describes what each block of a model name indicates. Not all combinations of the symbols are available.

HG-SR524B JG1K

7. HG-SR SERIES

- Note
- When the power supply voltage drops, the output and the rated speed cannot be guaranteed.
 - If the load to motor inertia ratio exceeds the indicated value, contact your local sales office.
 - Refer to the dimensions for the geared servo motor.
 - Except for the shaft-through portion.
 - In the environment where the servo motor is exposed to oil mist, oil, or water, the servo motor of the standard specifications may not be usable. Please contact your local sales office.
 - The following figure shows the vibration directions. The value is the one at the part that indicates the maximum value (normally the opposite to load-side bracket). When the servo motor stops, fretting is likely to occur at the bearing. Therefore, suppress the vibration to about half of the permissible value.

- V10 indicates that the amplitude of a single servo motor is 10 μm or less. The following figure shows the servo motor mounting position for measurement and the measuring position.

- The following shows permissible load for the shaft. Do not subject the shaft to load greater than the value in the specifications list. The value assumes that the load is applied independently.

- For the geared servo motor, the reducer area is IP44-equivalent.
- Refer to section 7.6 for the geared servo motor.
- The servo motors with an oil seal are available as optional products. For details, contact your local sales office.

7. HG-SR SERIES

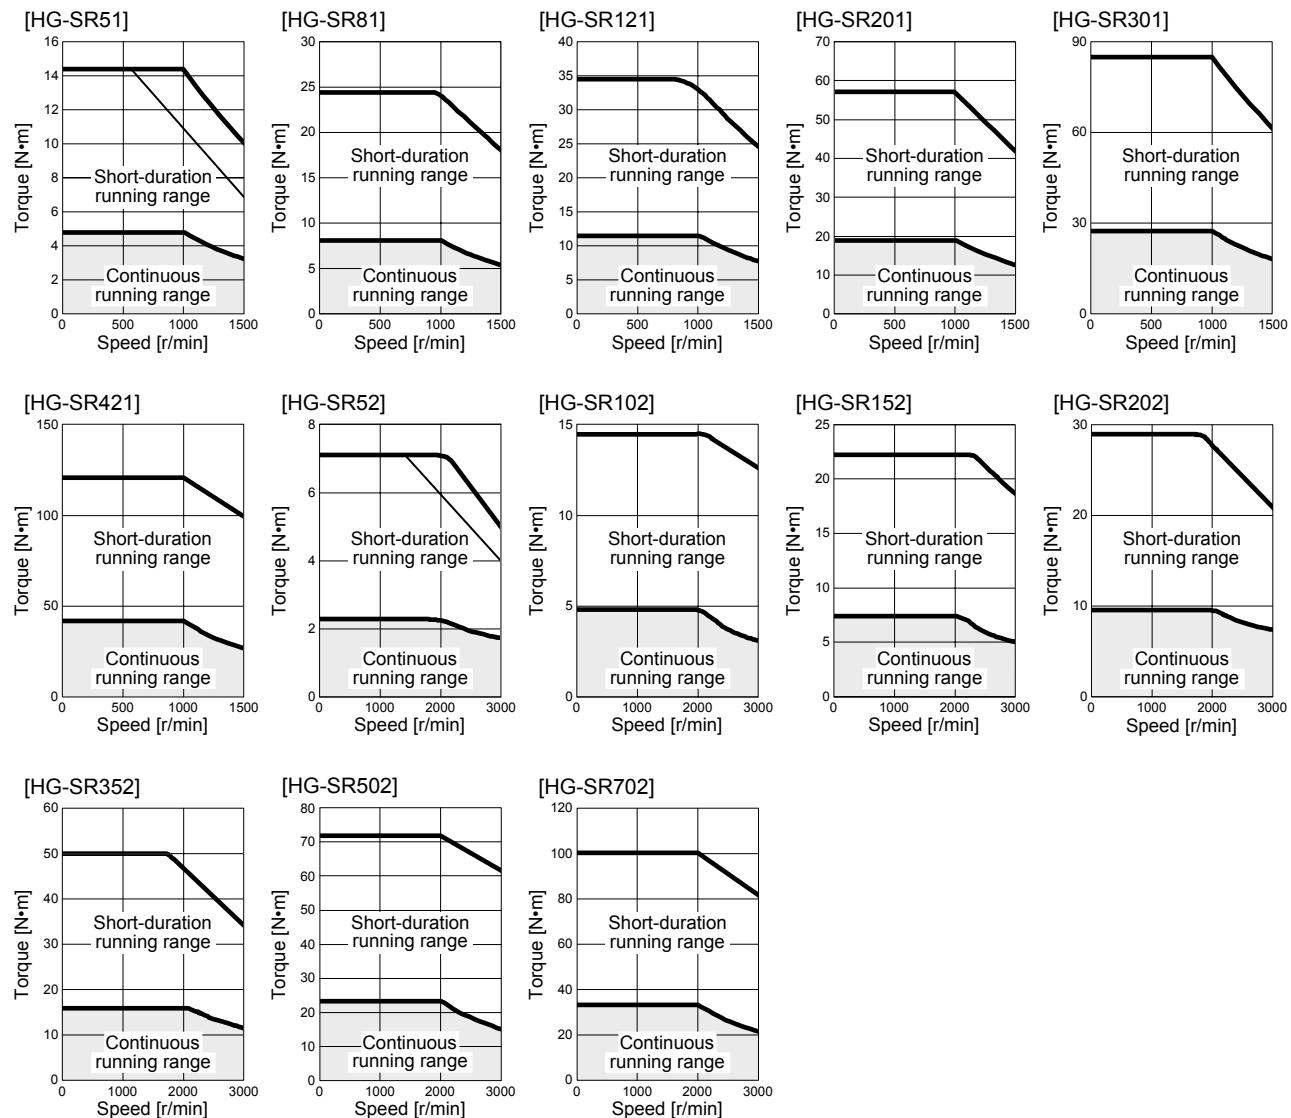

7.3.2 Torque characteristics

POINT

- For the system where the unbalanced torque occurs, such as a vertical axis system, it is recommended that the unbalanced torque of the machine be kept at 70% or less of the motor's rated torque.

(1) 3-phase 200 V AC

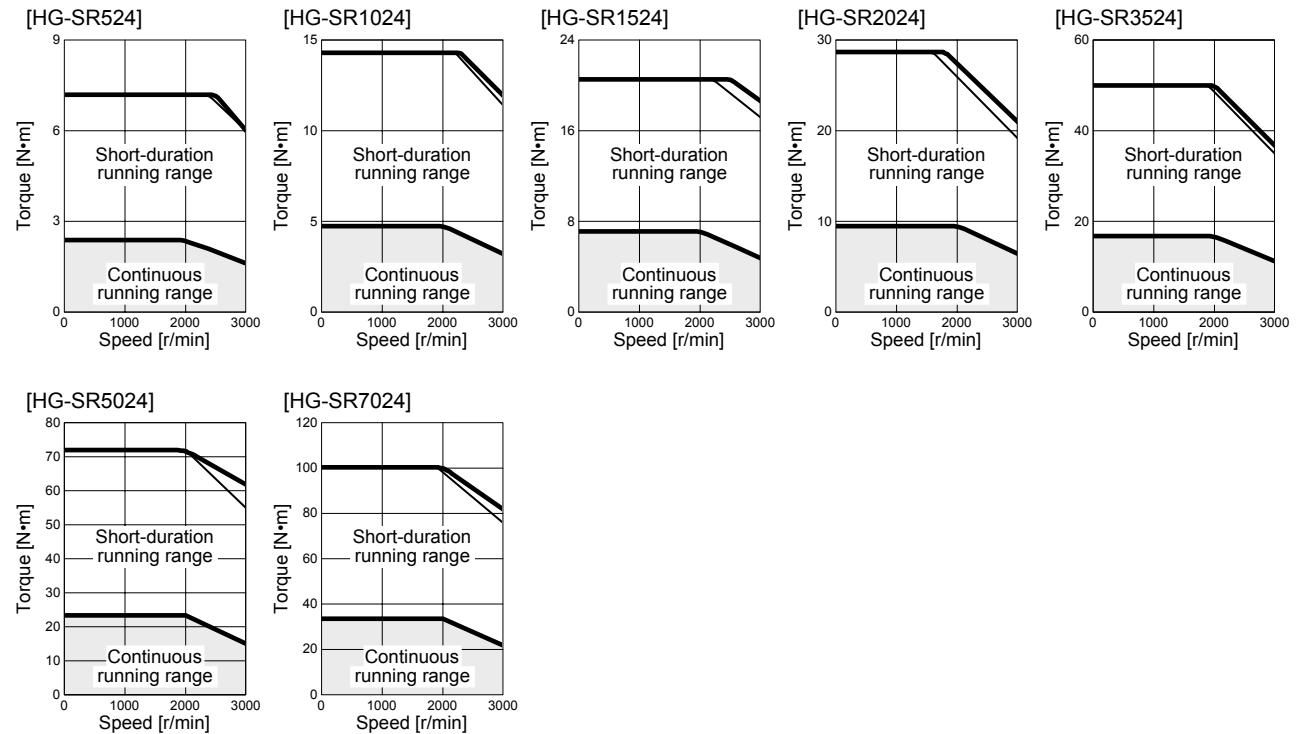

When the power supply input of the servo amplifier is 3-phase 200 V AC or 1-phase 230 V AC, the torque characteristic is indicated by the heavy line. For the 1-phase 200 V AC power supply, part of the torque characteristic is indicated by the thin line. HG-SR51 and HG-SR52 support single-phase power supply.

7. HG-SR SERIES

(2) 3-phase 400 V AC

When the power supply input of the servo amplifier are 3-phase 400 V AC, the torque characteristic is indicated by the heavy line. For the 3-phase 380 V AC power supply, part of the torque characteristic is indicated by the thin line.

7. HG-SR SERIES

7.4 Electromagnetic brake characteristics

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).

! CAUTION

- Before operating the servo motor, be sure to confirm that the electromagnetic brake operates properly.
- The operation time of the electromagnetic brake differs depending on the power supply circuit you use. Be sure to check the operation delay time with a real machine.

The characteristics of the electromagnetic brake provided for the servo motor with an electromagnetic brake are indicated below.

Item	Servo motor			HG-SR series	
	51B/81B/52(4)B/ 102(4)B/152(4)B	121B/201B/301B/421B/ 202(4)B/352(4)B/502(4)B/ 702(4)B			
Type (Note 1)	Spring actuated type safety brake				
Rated voltage (Note 4)	24 V DC ⁰ _{-10%}				
Power consumption	[W] at 20 °C	20	34		
Coil resistance (Note 6)	[Ω]	29.0	16.8		
Inductance (Note 6)	[H]	0.80	1.10		
Brake static friction torque	[N•m]	8.5	44		
Release delay time (Note 2)	[s]	0.04	0.1		
Braking delay time (Note 2)	[s]	DC off 0.03	0.03		
Permissible braking work	Per braking	[J]	400	4500	
	Per hour	[J]	4000	45000	
Brake looseness at servo motor shaft (Note 5)	[degrees]	0.2 to 0.6	0.2 to 0.6		
Brake life (Note 3)	Number of brakings [times]	20000	20000		
	Work per braking	[J]	200	1000	
Selection example of surge absorbers to be used (Note 7, 8)	For the suppressed voltage 125 V	TND20V-680KB			
	For the suppressed voltage 350 V	TND10V-221KB			

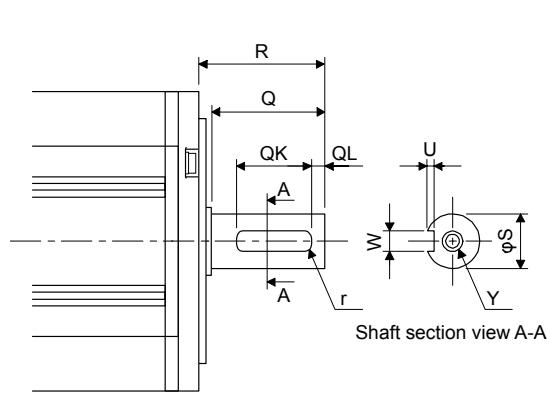

- Note 1. There is no manual release mechanism. When it is necessary to hand-turn the servo motor shaft for machine centering, etc., use a separate 24 V DC power supply to release the brake electrically.
2. The value for initial gap at 20 °C.
3. The brake gap will increase as the brake lining wears, but the gap is not adjustable.
- The brake life indicated is the number of braking cycles after which adjustment will be required.
4. Always prepare a power supply exclusively used for the electromagnetic brake.
5. These are initial values. These are not guaranteed values.
6. These values are measured values and not guaranteed values.
7. Select the electromagnetic brake control relay properly, considering the characteristics of the electromagnetic brake and surge absorber. When you use a diode for a surge absorber, the electromagnetic braking time will be longer.
8. Manufactured by Nippon Chemi-Con Corporation.

7. HG-SR SERIES

7.5 Servo motors with special shafts

The servo motors with special shafts indicated by the symbol (K) in the table are available. K is the symbol attached to the servo motor model names.

Servo motor	Shaft shape
	Key shaft (without key)
HG-SR_(B)K	K

7. HG-SR SERIES

7.6 Geared servo motors

- Geared servo motors must be mounted in the specified direction. Otherwise, it can leak oil, leading to a fire or malfunction.
- For the geared servo motor, transport it in the same status as in the installation method. Tipping it over can cause oil leakage.

Servo motors are available with a reducer designed for general industrial machines and high precision applications.

Servo motors with an electromagnetic brake are also available.

7.6.1 For general industrial machines (G1/G1H)

(1) Reduction ratio

The following table indicates the reduction ratios and reducer frame numbers of the geared servo motor for general industrial machines.

Servo motor	Reduction ratio						
	1/6	1/11	1/17	1/29	1/35	1/43	1/59
HG-SR52(4)(B)G1(H)	6100				6120

Mounting direction	Refer to (2) (b) in this section.	
	Refer to (2) (b)/(c) in this section.	
Lubrication method	Recommended products (Note 1)	Refer to (2) (c) in this section.
Output shaft rotating direction	Opposite direction to the servo motor output shaft	
Backlash (Note 5)	40 minutes to 2 ° at reducer output shaft (Note 4)	
Permissible load inertia moment ratio (when converting into the servo motor shaft) (Note 2)	4 times or less	
Maximum torque	Three times of the servo motor rated torque	
Maximum speed (servo motor shaft)	Refer to (2) (a) in this section.	
IP rating (reducer area)	IP44 equivalent	
Reducer efficiency (Note 3)	85% to 94%	

- Note 1. Already packed with grease.
2. If the above indicated value is exceeded, please contact your local sales office.
3. The reducer efficiency differs depending on the reduction ratio. Also, it changes depending on the operating conditions such as the output torque, speed and rotation, temperature, etc. The numerical value in the table is a typical value in the rated torque, rated speed and rotation and typical temperature, and not a guaranteed value.
4. These values are design values and not guaranteed values.
5. The backlash can be converted: 1 min = 0.0167 °

7. HG-SR SERIES

(a) Maximum speed

HG-SR502(4)(B)G1(H)							
HG-SR702(4)(B)G1(H)							

(b) Lubrication method and mounting direction

Oil lubrication cannot be used in applications where the servo motor will move. Specify grease lubrication.

For grease lubrication, the reducer is already grease-packed. For oil lubrication, pack the reducer with oil on the customer side.

Mounting direction	Shaft any direction		Shaft horizontal		Shaft downward		Shaft upward	
Reducer model	CNHM	CNVM	CHHM	CHVM	CVHM	CVVM	CWHM	CWVM

(2) Specifications

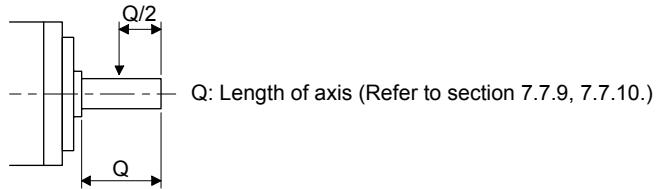

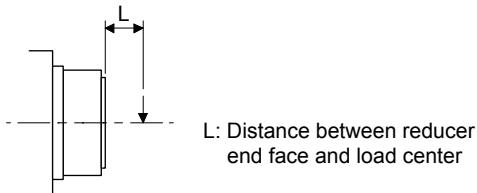

Item	Description	
Mounting method	Flange mounting	
Mounting direction	In any directions	
Lubrication method	Grease lubrication (already packed)	
Packed with	Reducer model number 20A, 32A: Harmonic grease SK-2 (Harmonic Drive Systems) Reducer model number 50A: Epiknock grease AP(N)2 (JX Nippon Oil & Energy)	
Output shaft rotating direction	Same as the servo motor output shaft direction.	
Backlash (Note 3)	3 minutes or less at reducer output shaft	
Permissible load to motor inertia ratio (when converting into the servo motor shaft) (Note 1)	10 times or less	
Maximum torque	Three times of the servo motor rated torque	
Maximum speed (servo motor shaft)	3000 r/min (permissible instantaneous speed: 3450 r/min)	
IP rating (reducer area)	IP44 equivalent	
Reducer efficiency (Note 2)	77% to 92%	

- Note 1. If the above indicated value is exceeded, please contact your local sales office.
2. The reducer efficiency differs depending on the reduction ratio. Also, it changes depending on the operating conditions such as the output torque, speed and rotation, temperature, etc. The numerical value in the table is a typical value in the rated torque, rated speed and rotation and typical temperature, and not a guaranteed value.
3. The backlash can be converted: 1 min = 0.0167 °

	50A	82	50h7	14	9	70	5.5	

7. HG-SR SERIES

7.7 Dimensions

Moment of inertia on the table is the value calculated by converting the total value of moment of inertia for servo motor, reducer, and electromagnetic brake with servo motor shaft.

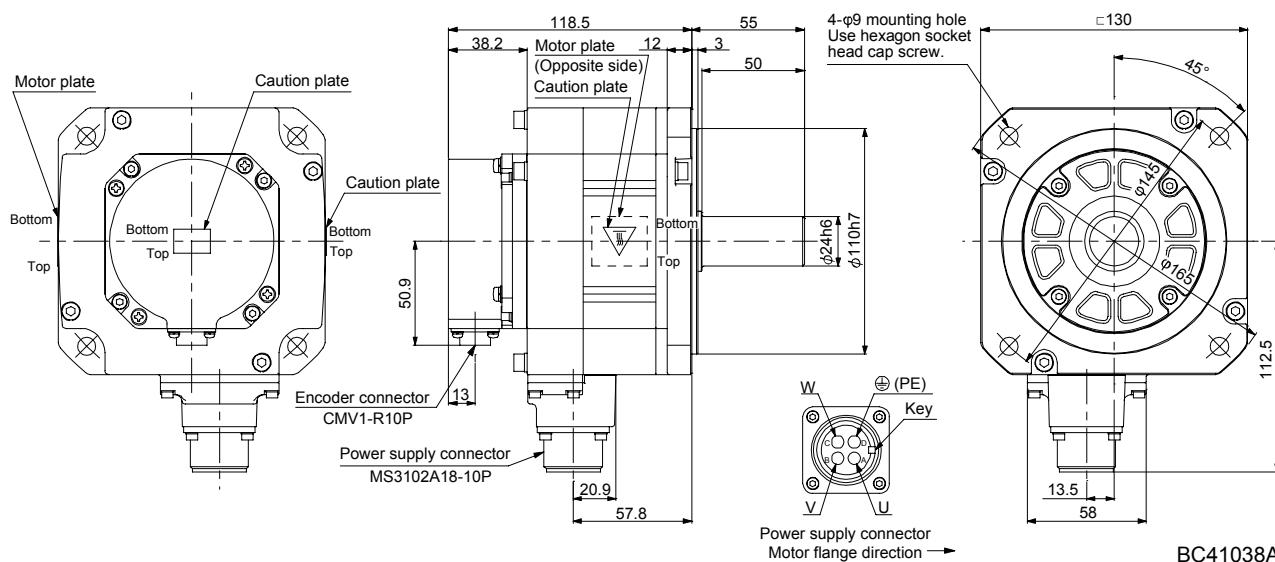

The dimensions without tolerances are general tolerance.

The outer frame of the reducer is a material surface such as casting. Its actual dimensions may be 1 mm to 3 mm larger than the drawing dimensions. Design the machine-side with allowances.

7.7.1 Standard (without electromagnetic brake and reducer)

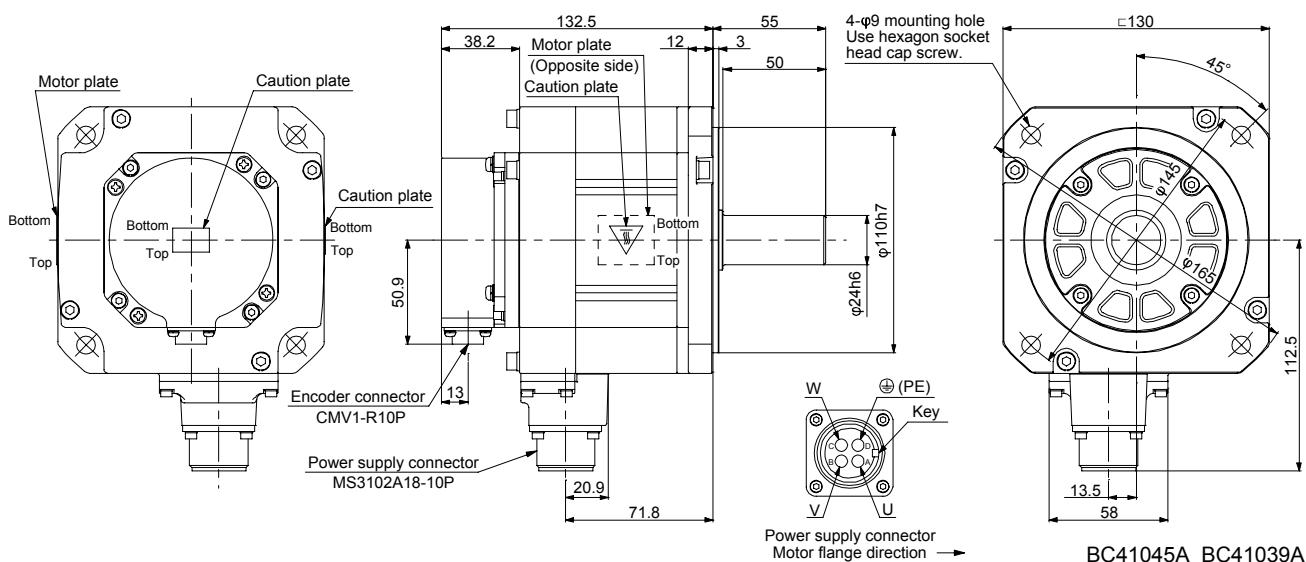

Model	Output [kW]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]

HG-SR352BG7	3.5	HPG-32A-05-J2PBZI-S	1/5	44	93.1	31
HG-SR3524BG7						

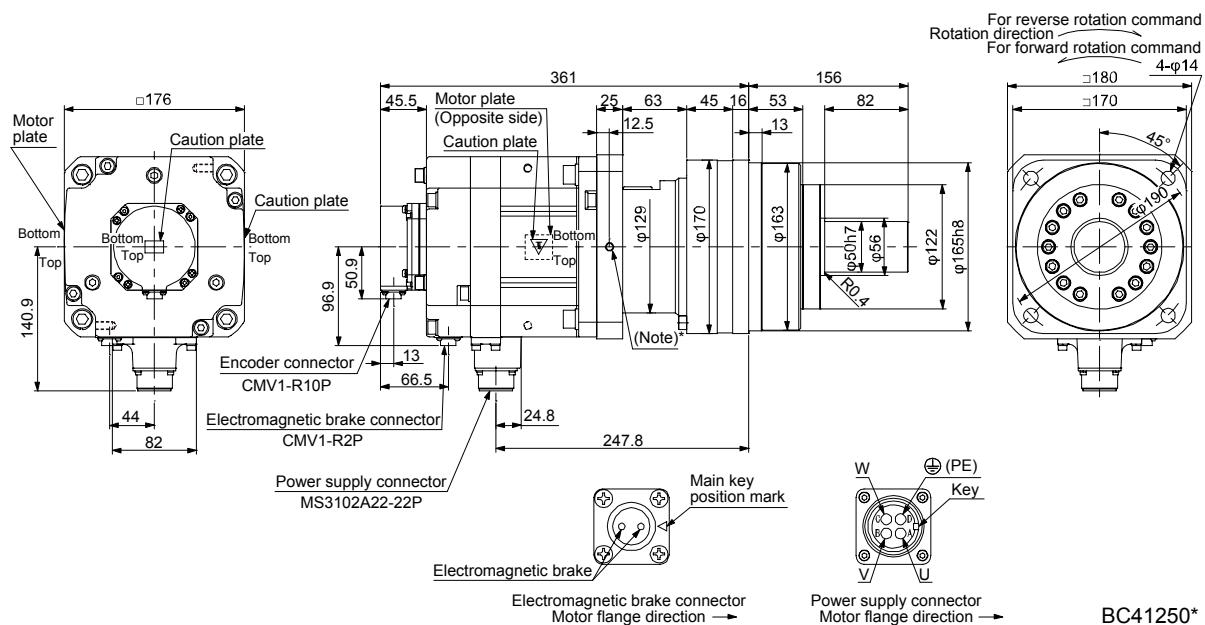

[Unit: mm]

Note. * is a screw hole for eyebolt (M8).

Model	Output [kW]	Reducer model	Reduction ratio	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-SR352BG7	3.5	HPG-50A-11-J2BBDF-S	1/11	44	96.6	43
HG-SR3524BG7		HPG-50A-21-J2BBDF-S	1/21		94.7	

[Unit: mm]

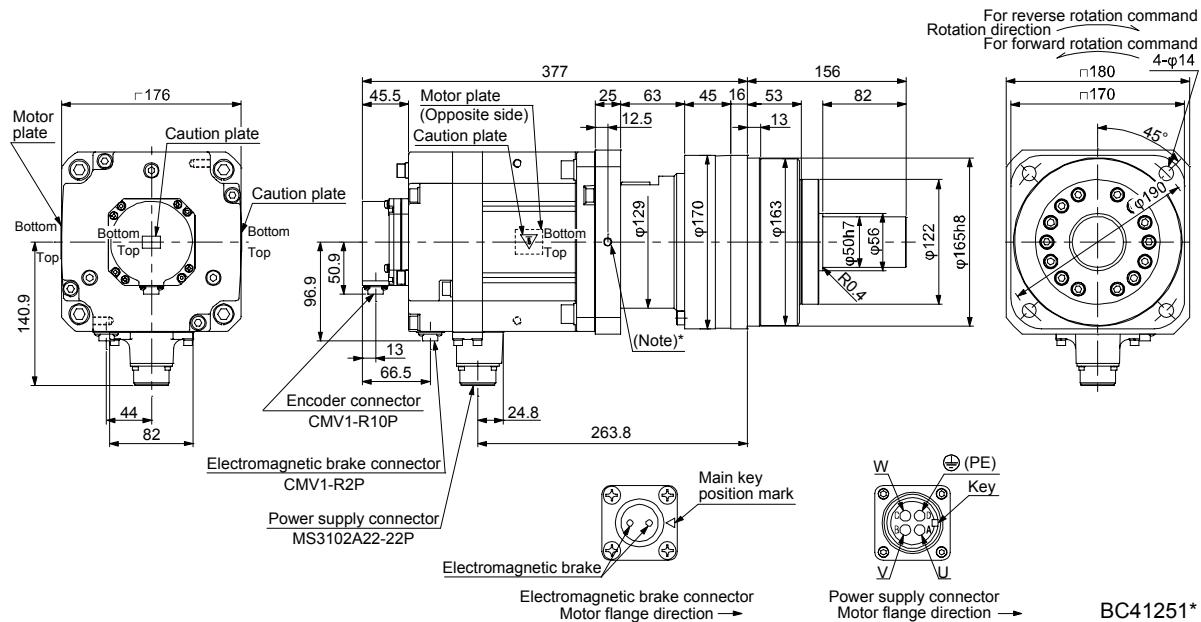

Note. * is a screw hole for eyebolt (M8).

7. HG-SR SERIES

Model	Output [kW]	Reducer model	Reduction ratio	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-SR502BG7	5.0	HPG-50A-05-J2BBCF-S	1/5	44	121	45
HG-SR502BG7		HPG-50A-11-J2BBDF-S	1/11		117	47

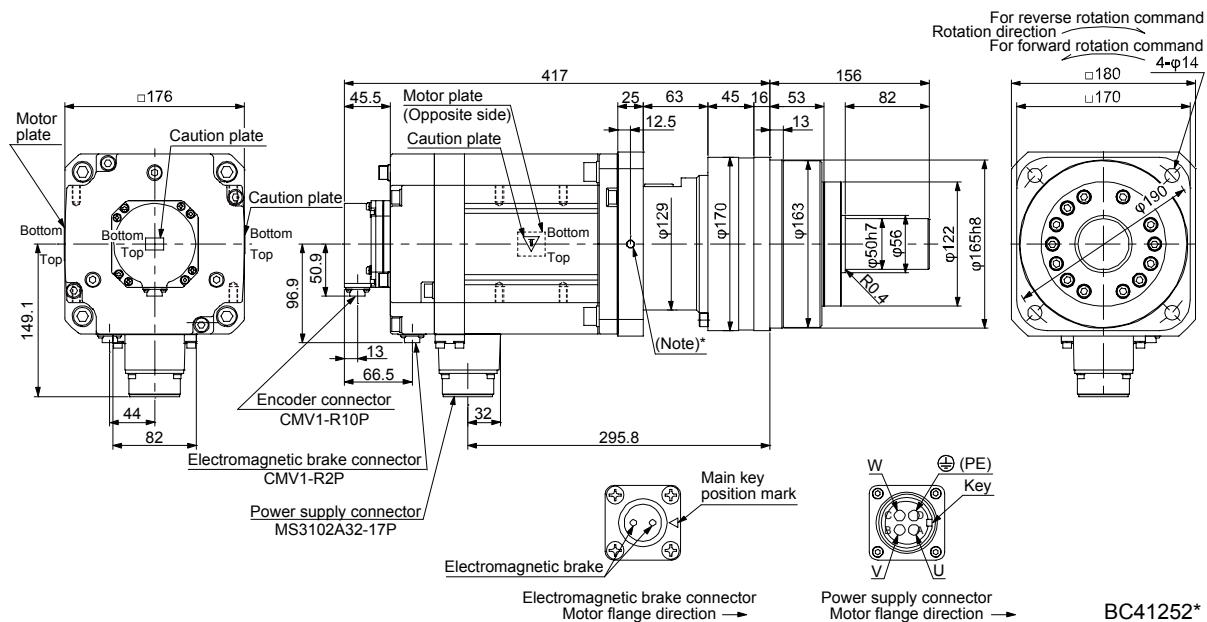

[Unit: mm]

Note. * is a screw hole for eyebolt (M8).

Model	Output [kW]	Reducer model	Reduction ratio	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-SR702BG7	7.0	HPG-50A-05-J2BBCF-S	1/5	44	173	52

[Unit: mm]

Note. * is a screw hole for eyebolt (M8).

MEMO

8. HG-JR SERIES

8. HG-JR SERIES

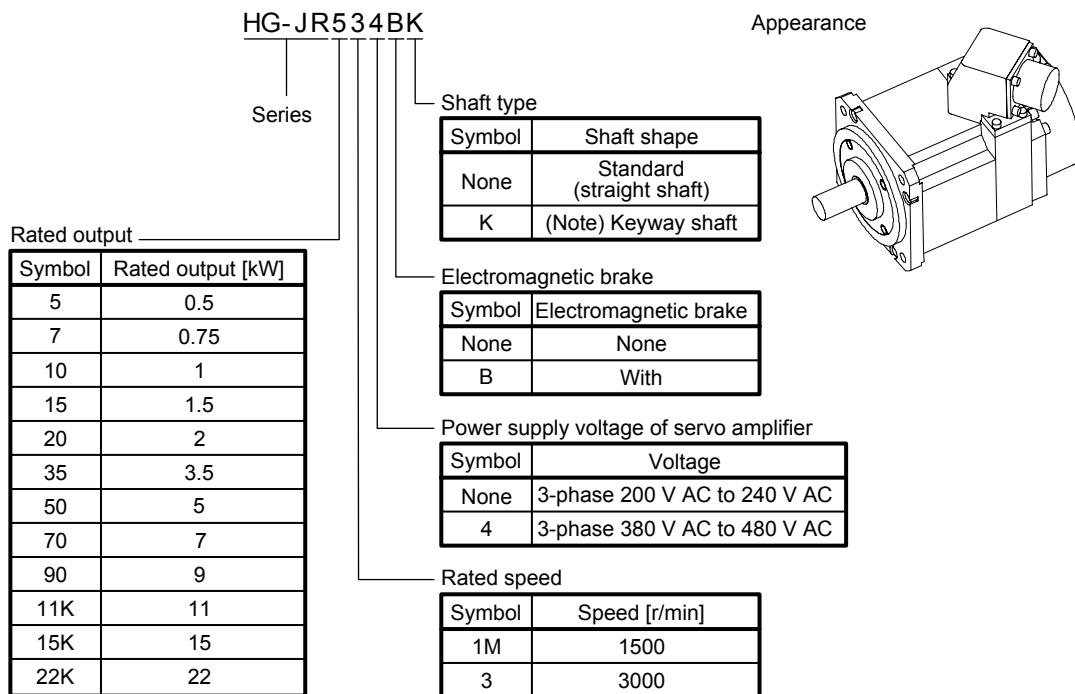

POINT

●HG-JR22K1M(4) with an electromagnetic brake is not available.

This chapter provides information on the servo motor specifications and characteristics. When using the HG-JR series servo motor, always read the Safety Instructions in the beginning of this manual and chapters 1 to 5, in addition to this chapter.

8.1 Model designation

The following describes model designation. Not all combinations of the symbols are available.

Note. Key is not included.

8. HG-JR SERIES

8.2 Combination list of servo motors and servo amplifiers

(1) Compatible with 3-phase 200 V AC

Servo motor	Servo amplifier			
	MR-J4 1-axis		MR-J4 2-axis	
	Standard	When the maximum torque is 400% (Note)	Standard	When the maximum torque is 400% (Note)

8. HG-JR SERIES

8.3 Standard specifications

8.3.1 Standard specifications list

Item	Servo motor		HG-JR 3000 r/min series (Compatible with 3-phase 200 V AC, low inertia/medium capacity)								
	53(B)	73(B)	103(B)	153(B)	203(B)	353(B)	503(B)	703(B)	903(B)		
Power supply capacity	Refer to "Power supply equipment capacity and generated loss of servo amplifiers" in Servo Amplifier Instruction Manual.										
Continuous running duty (Note 1)	Rated output (Note 8) [kW]	0.5	0.75	1.0	1.5	2.0	3.3 (3.5)	5.0	7.0	9.0	
	Rated torque (Note 8) [N·m]	1.6	2.4	3.2	4.8	6.4	10.5 (11.1)	15.9	22.3	28.6	
Maximum torque (Note 8) [N·m]	4.8 (6.4)	7.2 (9.6)	9.6 (12.7)	14.3 (19.1)	19.1 (25.5)	32.0 (44.6)	47.7 (63.7)	66.8	85.8		
Rated speed (Note 1) [r/min]	3000										
Maximum speed [r/min]	6000									5000	
Instantaneous permissible speed [r/min]	6900									5750	
Power rate at continuous rated torque	Standard [kW/s]	16.7	27.3	38.2	60.2	82.4	83.5	133	115	147	
	With an electromagnetic brake [kW/s]	12.5	22.0	32.2	53.1	74.8	71.6	119	93.9	125	
Rated current (Note 8) [A]	3.0	5.6	5.6	11	11	17 (18)	27	34	41		
Maximum current (Note 8) [A]	9.0 (12)	17 (23)	17 (23)	32 (43)	32 (43)	51 (71)	81 (108)	103	134		
Moment of inertia J	Standard [$\times 10^{-4}$ kg·m 2]	1.52	2.09	2.65	3.79	4.92	13.2	19.0	43.3	55.8	
	With an electromagnetic brake [$\times 10^{-4}$ kg·m 2]	2.02	2.59	3.15	4.29	5.42	15.4	21.2	52.9	65.4	
Recommended load to motor inertia ratio (Note 2)	10 times or less										
Speed/position detector	22-bit encoder common to absolute position/incremental (resolution per servo motor revolution: 4194304 pulses/rev)										
Oil seal	With										
Insulation class	155 (F)										
Structure	Totally-enclosed, natural-cooling (IP rating: IP67 (Note 3))										
Environment (Note 4)	Ambient temperature	Operation	0 °C to 40 °C (non-freezing)								
		Storage	-15 °C to 70 °C (non-freezing)								
	Ambient humidity	Operation	80 %RH or less (non-condensing)								
		Storage	90 %RH or less (non-condensing)								
	Ambience		Indoors (no direct sunlight), free from corrosive gas, flammable gas, oil mist, dust, and dirt								
	Altitude		1000 m or less above sea level								
Vibration rank (Note 6)	Vibration resistance (Note 5)		X, Y: 24.5 m/s 2							X: 24.5 m/s 2 Y: 29.4 m/s 2	
	L [mm]		40				55		79		
	Radial [N]		323				980		2450		
	Thrust [N]		284				490		980		
	Standard [kg]		3.0	3.7	4.5	5.9	7.5	13	18	29	
	With an electromagnetic brake [kg]		4.4	5.1	5.9	7.3	8.9	15	20	35	
Mass	Standard [kg]		36				42				

8. HG-JR SERIES

Item	Servo motor		HG-JR 1500 r/min series (Compatible with 3-phase 200 V AC, low inertia/large capacity)		
			11K1M(B)	15K1M(B)	22K1M
	Refer to "Power supply equipment capacity and generated loss of servo amplifiers" in Servo Amplifier Instruction Manual.				
Continuous running duty (Note 1)	Rated output [kW]	11	15	22	
Maximum torque [N·m]	Rated torque [N·m]	70.0	95.5	140	
		210	286	420	
Rated speed (Note 1) [r/min]			1500		
Maximum speed [r/min]			3000	2500	
Instantaneous permissible speed [r/min]			3450	2875	
Power rate at continuous rated torque	Standard [kW/s]	223	290	401	
	With an electromagnetic brake [kW/s]	204	271		
Rated current [A]		61	76	99	
Maximum current [A]		200	246	315	
Moment of inertia J	Standard [$\times 10^{-4}$ kg·m 2]	220	315	489	
	With an electromagnetic brake [$\times 10^{-4}$ kg·m 2]	240	336		
Recommended load to motor inertia ratio (Note 2)			10 times or less		
Speed/position detector			22-bit encoder common to absolute position/incremental (resolution per servo motor revolution: 4194304 pulses/rev)		
Oil seal			With		
Insulation class			155 (F)		
Structure			Totally-enclosed, natural-cooling (IP rating: IP67 (Note 3))	Totally-enclosed, force-cooled (IP rating: IP44 (Note 3))	
Environment (Note 4)	Ambient temperature	Operation	0 °C to 40 °C (non-freezing)		
		Storage	-15 °C to 70 °C (non-freezing)		
	Ambient humidity	Operation	80 %RH or less (non-condensing)		
		Storage	90 %RH or less (non-condensing)		
	Ambience		Indoors (no direct sunlight), free from corrosive gas, flammable gas, oil mist, dust, and dirt		
	Altitude		1000 m or less above sea level		
	Vibration resistance (Note 5)		X, Y: 24.5 m/s 2		
Vibration rank (Note 6)			V10		
Permissible load for the shaft (Note 7)	L [mm]		116	140	
	Radial [N]		2940	3234	
	Thrust [N]		980	1470	
Mass	Standard [kg]	62	86	120	
	With an electromagnetic brake [kg]	74	97		
Cooling fan	Power supply	Voltage/ Frequency		3-phase 200 V AC to 230 V AC 50 Hz/60 Hz	
		Power consumption [W]		60 (50 Hz)/80 (60 Hz)	
	Rated current [A]			0.20 (50 Hz)/0.27 (60 Hz)	

8. HG-JR SERIES

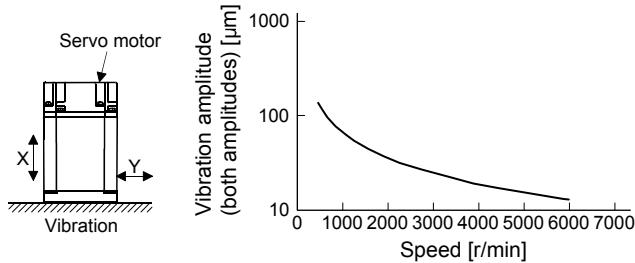

Item	Servo motor		HG-JR 3000 r/min series (Compatible with 3-phase 400 V AC, low inertia/medium capacity)								
	534(B)	734(B)	1034(B)	1534(B)	2034(B)	3534(B)	5034(B)	7034(B)	9034(B)

	With an electromagnetic brake [kg]	74	97		
Cooling fan	Power supply	Voltage/ Frequency		3-phase 380 V AC to 480 V AC 50 Hz/60 Hz	
		Power consumption [W]		58 (50 Hz)/72 (60 Hz)	
	Rated current [A]			0.12 (50 Hz)/0.14 (60 Hz)	

8. HG-JR SERIES

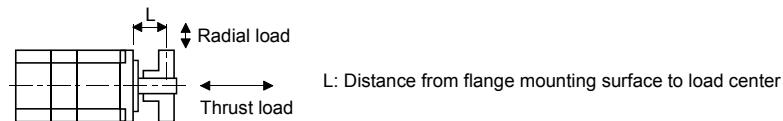

- Note
- When the power supply voltage drops, the output and the rated speed cannot be guaranteed.
 - If the load to motor inertia ratio exceeds the indicated value, contact your local sales office.
 - Except for the shaft-through portion.
 - In the environment where the servo motor is exposed to oil mist, oil, or water, the servo motor of the standard specifications may not be usable. Please contact your local sales office.
 - The following figure shows the vibration directions. The value is the one at the part that indicates the maximum value (normally the opposite to load-side bracket). When the servo motor stops, fretting is likely to occur at the bearing. Therefore, suppress the vibration to about half of the permissible value.

- V10 indicates that the amplitude of a single servo motor is 10 μm or less. The following figure shows the servo motor mounting position for measurement and the measuring position.

- The following shows permissible load for the shaft. Do not subject the shaft to load greater than the value in the specifications list. The value assumes that the load is applied independently.

- Values in parentheses are at the maximum torque of 400%. The maximum torque can be increased to 400% by changing the servo amplifier. Refer to section 8.2 for the combinations.

8. HG-JR SERIES

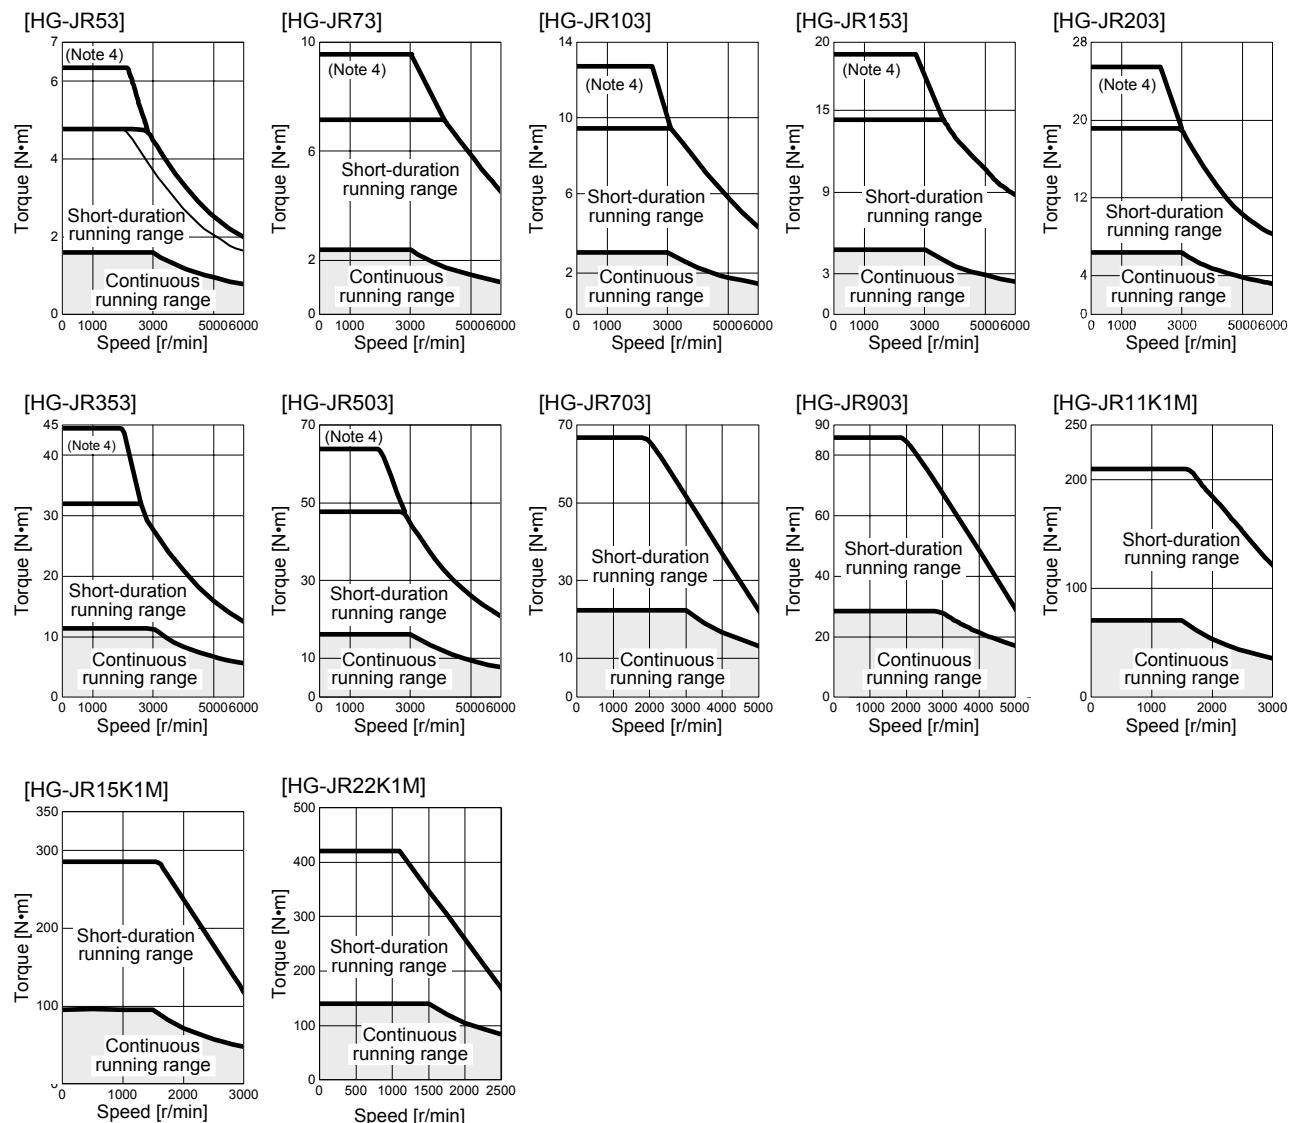

8.3.2 Torque characteristics

POINT

- For the system where the unbalanced torque occurs, such as a vertical axis system, it is recommended that the unbalanced torque of the machine be kept at 70% or less of the motor's rated torque.

(1) 3-phase 200 V AC

When the power supply input of the servo amplifier is 3-phase 200 V AC or 1-phase 230 V AC, the torque characteristic is indicated by the heavy line. For the 1-phase 200 V AC power supply, part of the torque characteristic is indicated by the thin line. HG-JR53 and HG-JR73 support 1-phase power supply input.

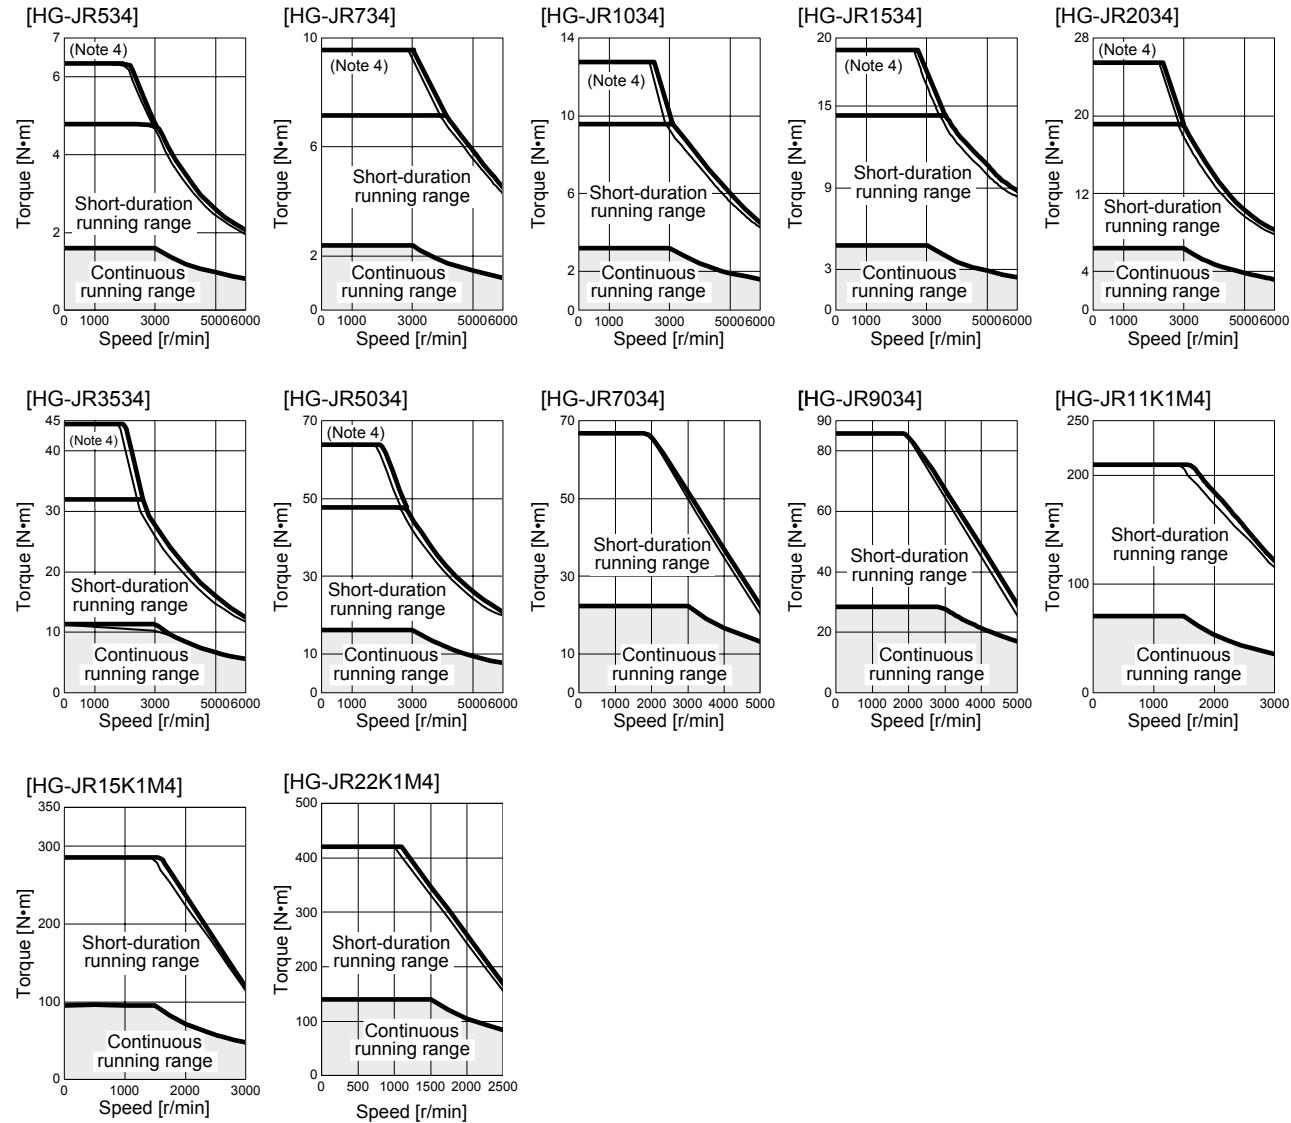

Note. Value at the maximum torque 400%. The maximum torque can be increased to 400% by changing the servo amplifier. Refer to section 8.2 for the combinations.

8. HG-JR SERIES

(2) 3-phase 400 V AC

When the power supply input of the servo amplifier is 3-phase 400 V AC, the torque characteristic is indicated by the heavy line. For the 3-phase 380 V AC power supply, part of the torque characteristic is indicated by the thin line.

Note. Value at the maximum torque 400%. The maximum torque can be increased to 400% by changing the servo amplifier. Refer to section 8.2 for the combinations.

8. HG-JR SERIES

8.4 Electromagnetic brake characteristics

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).
- Before operating the servo motor, be sure to confirm that the electromagnetic brake operates properly.
- The operation time of the electromagnetic brake differs depending on the power supply circuit you use. Be sure to check the operation delay time with a real machine.

⚠ CAUTION

POINT

- HG-JR22K1M(4) with an electromagnetic brake is not available.

The characteristics of the electromagnetic brake provided for the servo motor with an electromagnetic brake are indicated below.

Item	Servo motor	HG-JR series			
		53(4)B/73(4)B/ 103(4)B/153(4)B/ 203(4)B	353(4)B/ 503(4)B	703(4)B/ 903(4)B	11K1M(4)B/ 15K1M(4)B
Type (Note 1)		Spring actuated type safety brake			
Rated voltage (Note 4)		24 V DC ⁰ _{-10%}			
Power consumption [W] at 20 °C		11.7	23	34	32
Coil resistance (Note 6) [Ω]		49	25	16.8	18.2
Inductance (Note 6) [H]		0.37	0.25	1.10	0.73
Brake static friction torque [N·m]		6.6	16	44	126
Release delay time (Note 2) [s]		0.09	0.12	0.1	0.5
Braking delay time (Note 2) [s]	DC off	0.03	0.03	0.03	0.2
Permissible braking work	Per braking [J]	64	400	4500	5000
	Per hour [J]	640	4000	45000	45200
Brake looseness at servo motor shaft (Note 5) [degrees]		0.01 to 0.8	0.01 to 0.6	0.2 to 0.6	0.01 to 0.6
Brake life (Note 3)	Number of brakings [times]	5000	5000	20000	20000
	Work per braking [J]	64	400	1000	400
Selection example of surge absorbers to be used (Note 7)	For the suppressed voltage 125 V	(Note 9) ERZV10D221		(Note 8) TND20V-680KB	(Note 9) ERZV10D221
	For the suppressed voltage 350 V	(Note 8) TNR-10V221K		(Note 8) TND10V-221KB	(Note 8) TNR-10V221K

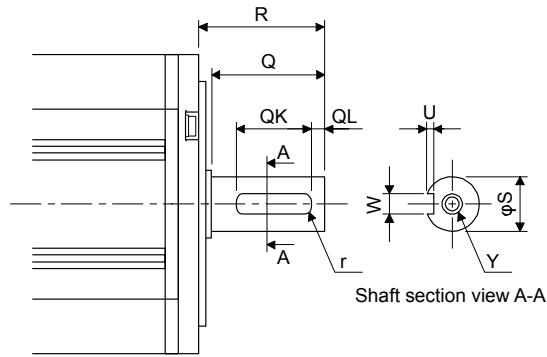

- Note 1. There is no manual release mechanism. When it is necessary to hand-turn the servo motor shaft for machine centering, etc., use a separate 24 V DC power supply to release the brake electrically.
2. The value for initial gap at 20 °C.
3. The brake gap will increase as the brake lining wears, but the gap is not adjustable.
The brake life indicated is the number of braking cycles after which adjustment will be required.
4. Always prepare a power supply exclusively used for the electromagnetic brake.
5. These are initial values. These are not guaranteed values.
6. These values are measured values and not guaranteed values.
7. Select the electromagnetic brake control relay properly, considering the characteristics of the electromagnetic brake and surge absorber. When you use a diode for a surge absorber, the electromagnetic braking time will be longer.
8. Manufactured by Nippon Chemi-Con Corporation.
9. Manufactured by Panasonic

8. HG-JR SERIES

8.5 Servo motors with special shafts

The servo motors with special shafts indicated by the symbol (K) in the table are available. K is the symbol attached to the servo motor model names.

Servo motor	Shaft shape
	Key shaft (without key)
HG-JR_(4)(B)K	K

Servo motor	Variable dimensions									[Unit: mm]
	S	R	Q	W	QK	QL	U	r	Y	
HG-JR53(4)(B)K										
HG-JR73(4)(B)K										
HG-JR103(4)(B)K	16h6	40	30	$5^0_{-0.030}$	25	2	$3^{+0.1}_0$	2.5	M4 screw hole depth 15	
HG-JR153(4)(B)K										
HG-JR203(4)(B)K										
HG-JR353(4)(B)K	28h6	55	50	$8^0_{-0.036}$	36	5	$4^{+0.2}_0$	4	M8 screw hole depth 20	
HG-JR503(4)(B)K										
HG-JR703(4)(B)K	$35^{+0.010}_0$	79	75	$10^0_{-0.036}$	55	5	$5^{+0.2}_0$	5	M8 screw hole depth 20	
HG-JR903(4)(B)K										
HG-JR11K1M(4)(B)K	55m6	116	110	$16^0_{-0.040}$	90	5	$6^{+0.2}_0$	8	M10 screw hole depth 27	
HG-JR15K1M(4)(B)K										
HG-JR22K1M(4)	65m6	140	130	$18^0_{-0.040}$	120	5	$7^{+0.2}_0$	9	M12 screw hole depth 25	

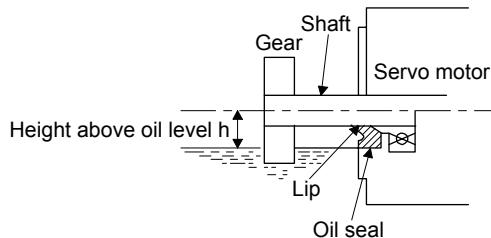

Key shaft (without key)

8. HG-JR SERIES

8.6 Oil seal

The oil seal prevents the entry of oil into the servo motor.

Install the servo motor horizontally, and set the oil level in the gear box to be lower than the oil seal lip always.

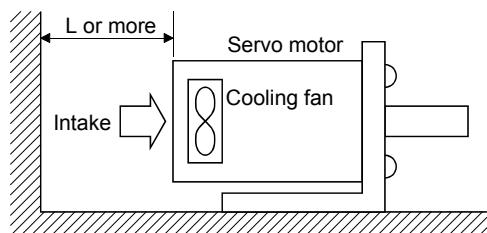

Servo motor	Oil level h [mm]
HG-JR53(4)(B)	
HG-JR73(4)(B)	
HG-JR103(4)(B)	18
HG-JR153(4)(B)	
HG-JR203(4)(B)	
HG-JR353(4)(B)	
HG-JR503(4)(B)	20
HG-JR703(4)(B)	
HG-JR903(4)(B)	25
HG-JR11K1M(4)(B)	
HG-JR15K1M(4)(B)	40
HG-JR22K1M(4)	50

8.7 Cooling fan

The HG-JR22K1M(4) servo motor has a cooling fan. Leave the following distance between the servo motor's suction face and the wall.

Servo motor	Distance L [mm]
HG-JR22K1M(4)	150

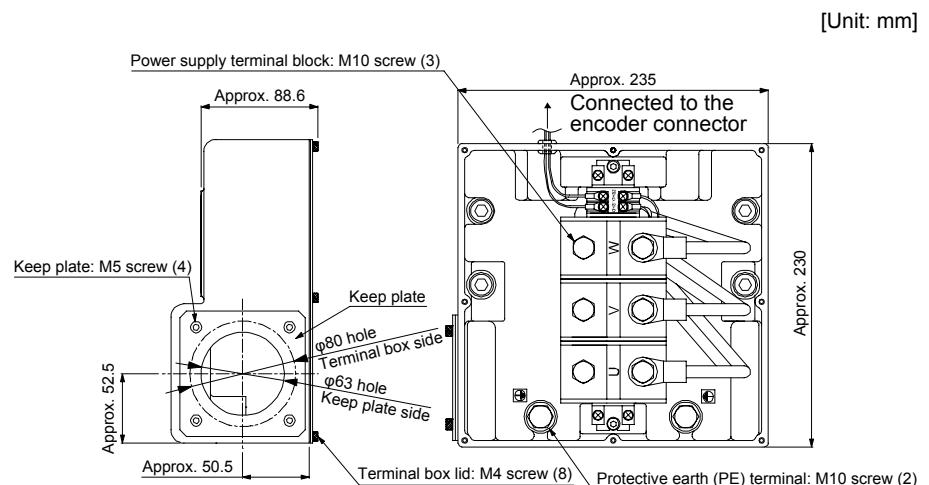

8. HG-JR SERIES

8.8 Dimensions

Moment of inertia on the table is the value calculated by converting the total value of moment of inertia for servo motor and electromagnetic brake with servo motor shaft.

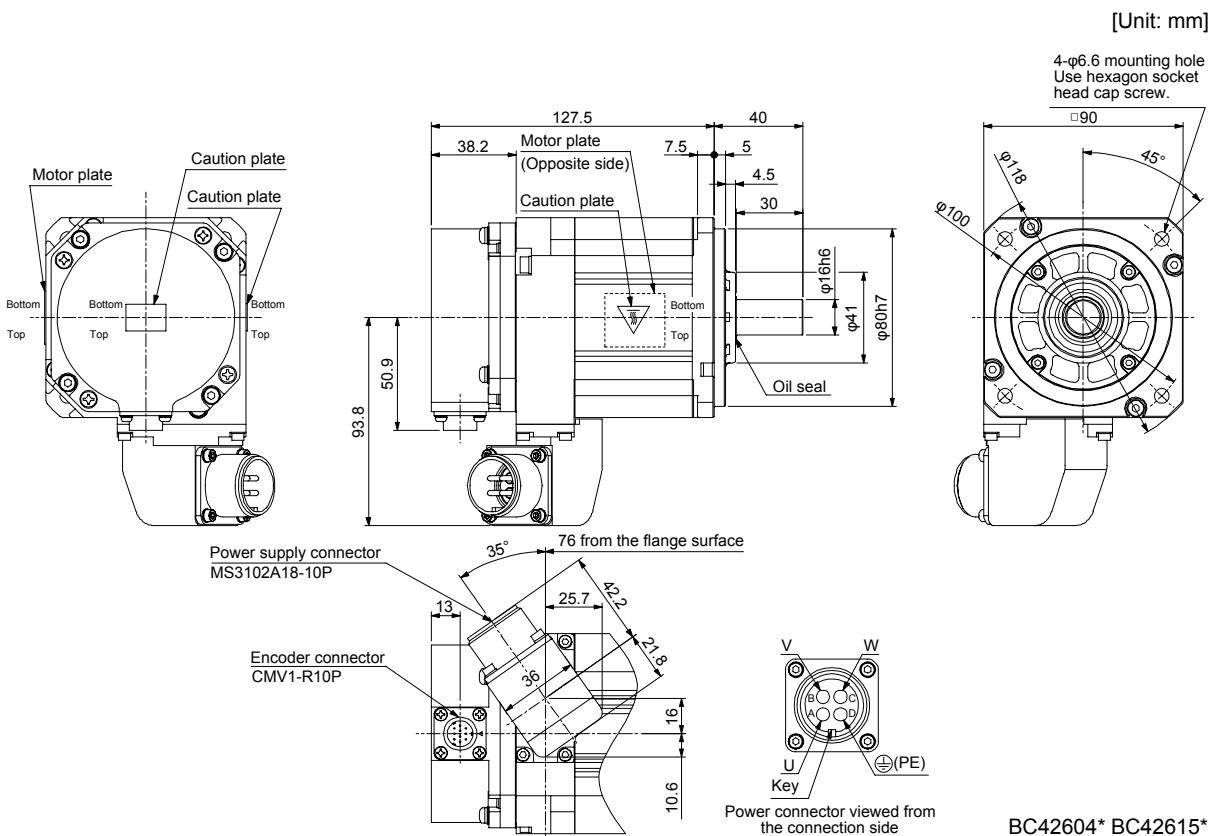

The dimensions without tolerances are general tolerance.

8.8.1 Terminal box detail diagram (HG-JR22K1M(4))

8.8.2 Standard (without an electromagnetic brake)

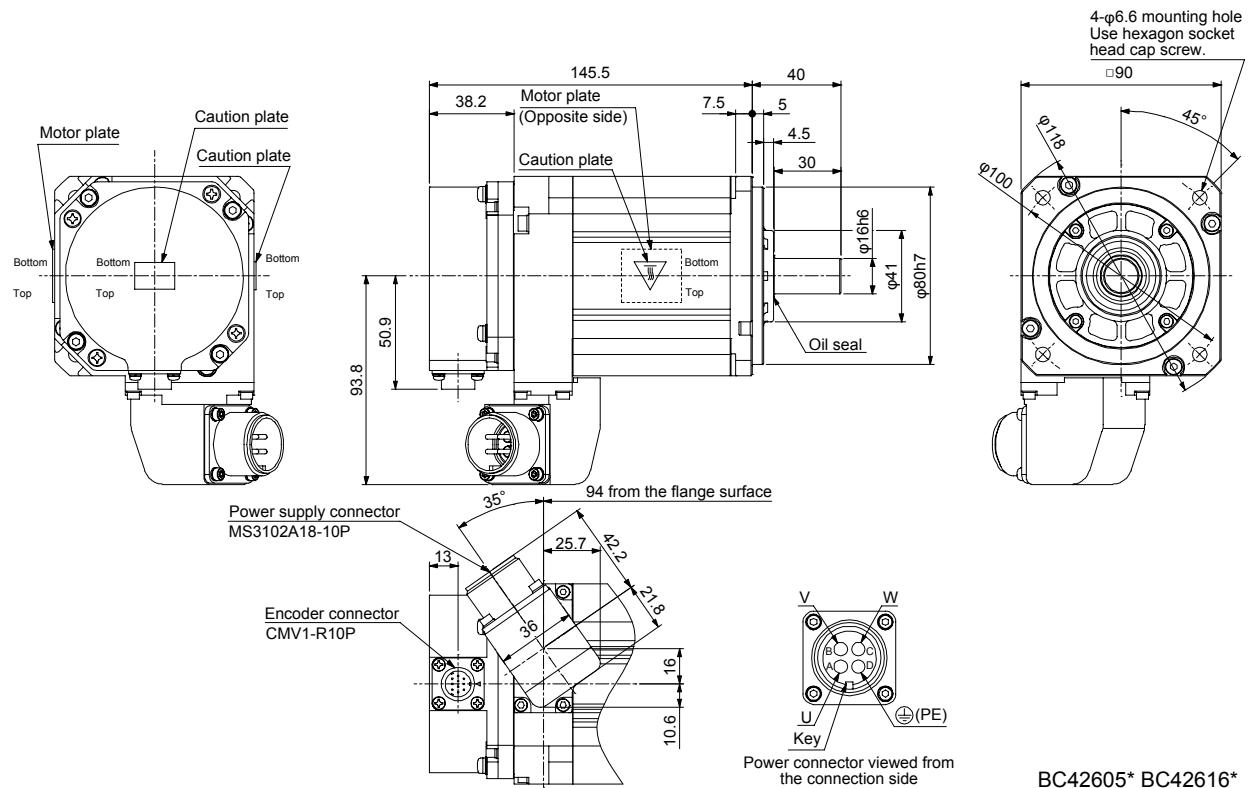

Model	Output [kW]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-JR53	0.5	1.52	3.0

[Unit: mm]

4-φ13.5 mounting hole
Use hexagon socket
head cap screw.

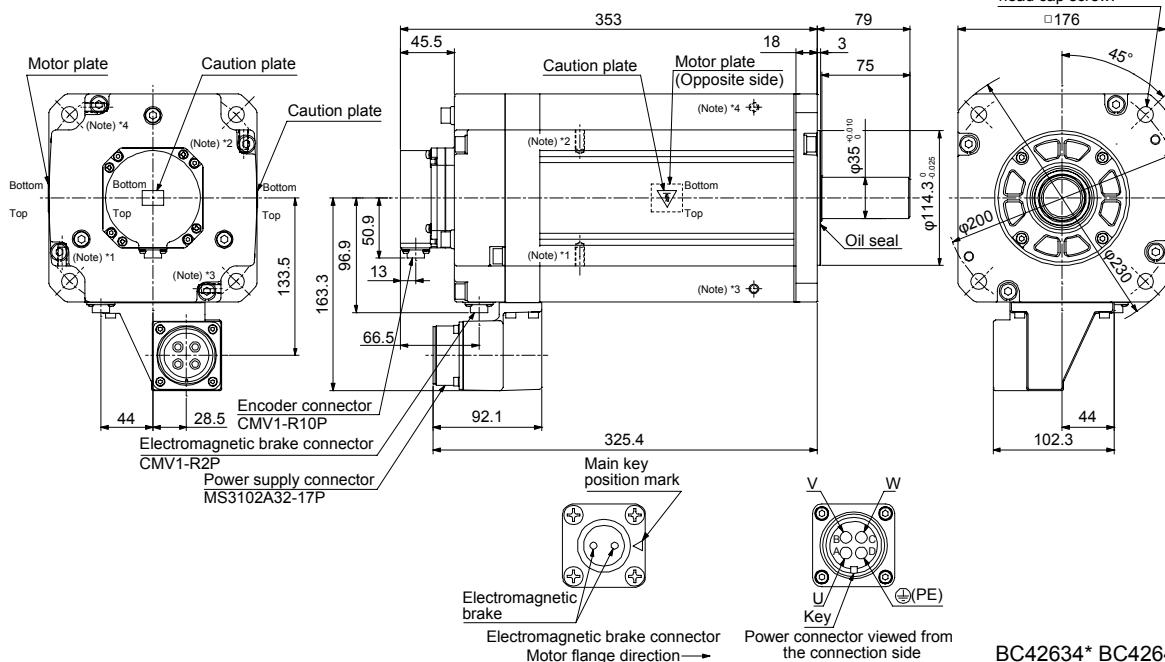

Note. *1, *2, *3 and *4 are screw hole for eyebolt (M8).

Model	Output [kW]	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-JR903B	9.0	44	65.4	42
HG-JR9034B				

[Unit: mm]

4-φ13.5 mounting hole
Use hexagon socket
head cap screw.

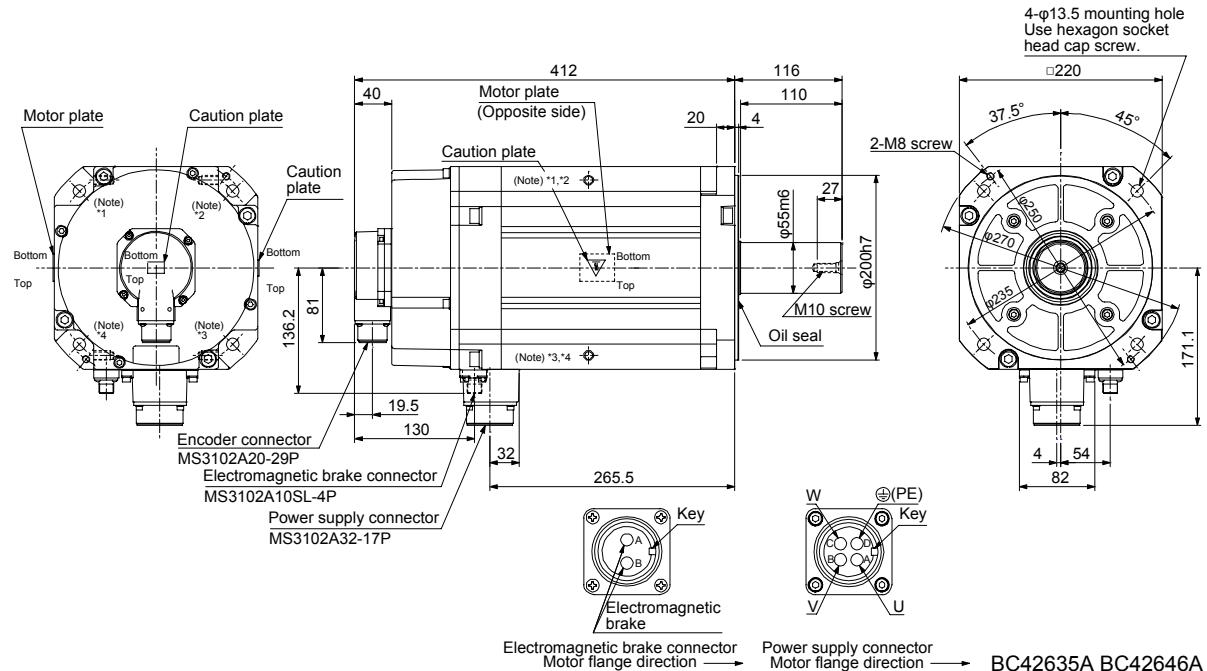

Note. *1, *2, *3 and *4 are screw hole for eyebolt (M8).

8. HG-JR SERIES

Model	Output [kW]	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m ²]	Mass [kg]
HG-JR11K1MB	11	126	240	74
HG-JR11K1M4B				

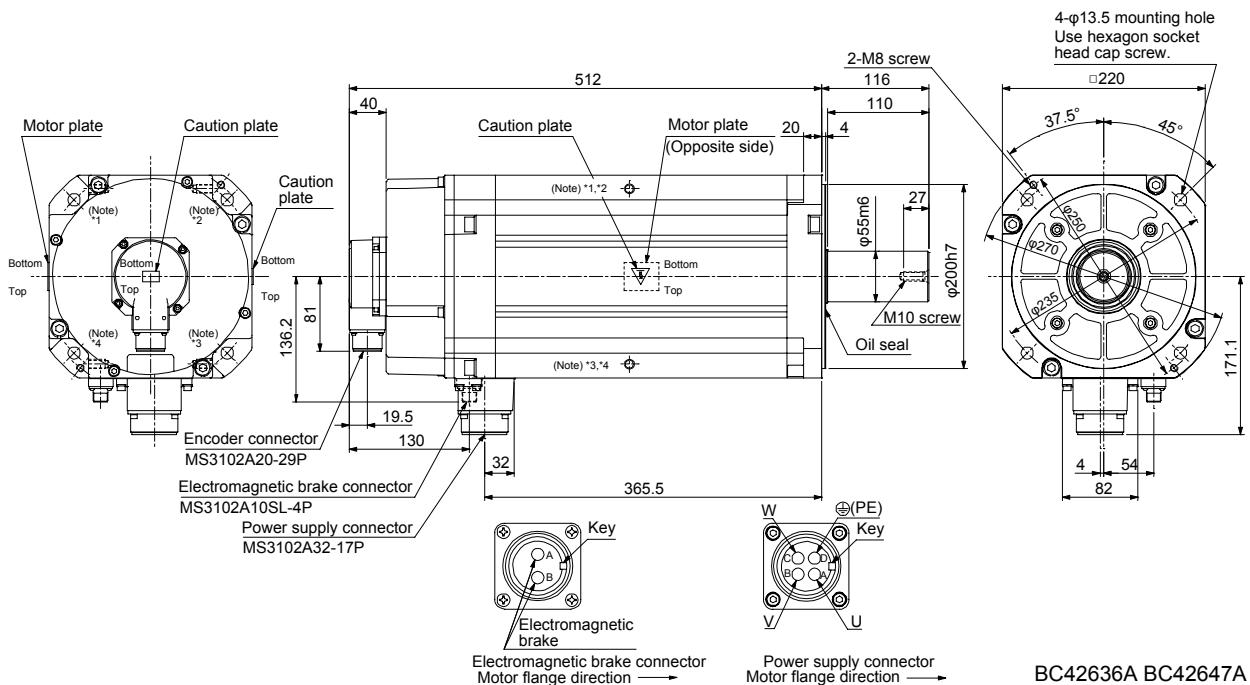

[Unit: mm]

Note. *1, *2, *3 and *4 are screw hole for eyebolt (M10).

Model	Output [kW]	Brake static friction torque [N·m]	Moment of inertia J [$\times 10^{-4}$ kg·m ²]	Mass [kg]
HG-JR15K1MB	15	126	336	97
HG-JR15K1M4B				

[Unit: mm]

Note. *1, *2, *3 and *4 are screw hole for eyebolt (M10).

MEMO

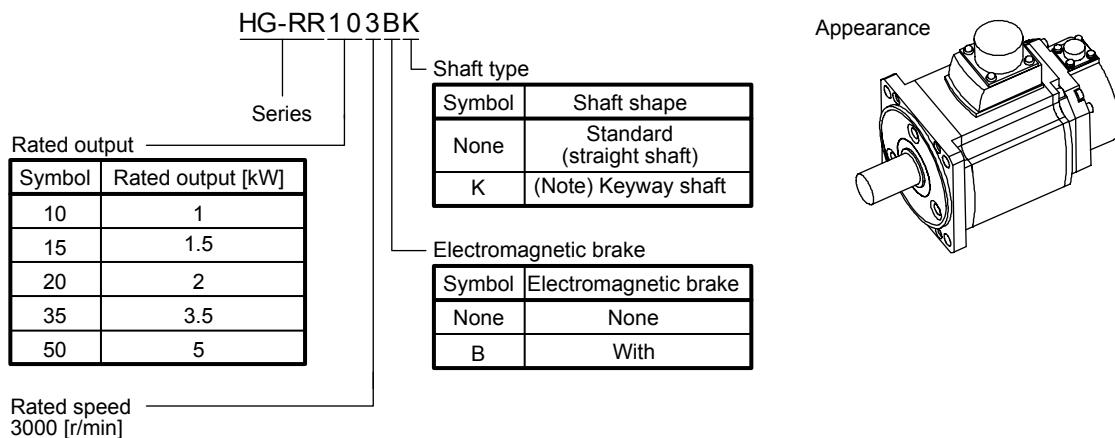

9. HG-RR SERIES

9. HG-RR SERIES

This chapter provides information on the servo motor specifications and characteristics. When using the HG-RR series servo motor, always read the Safety Instructions in the beginning of this manual and chapters 1 to 5, in addition to this chapter.

9.1 Model designation

The following describes model designation. Not all combinations of the symbols are available.

Note. Key is not included.

9.2 Combination list of servo motors and servo amplifiers

Servo motor	Servo amplifier
HG-RR103	MR-J4-200A MR-J4-200A-RJ MR-J4-200B
HG-RR153	MR-J4-200B-RJ MR-J4-200B-RJ010 MR-J4-200B-RJ020
HG-RR203	MR-J4-350A MR-J4-350A-RJ MR-J4-350B MR-J4-350B-RJ MR-J4-350B-RJ010 MR-J4-350B-RJ020
HG-RR353	MR-J4-500A MR-J4-500A-RJ MR-J4-500B
HG-RR503	MR-J4-500B-RJ MR-J4-500B-RJ010 MR-J4-500B-RJ020

9. HG-RR SERIES

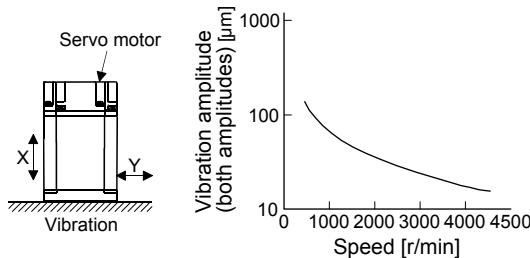

9.3 Standard specifications

9.3.1 Standard specifications list

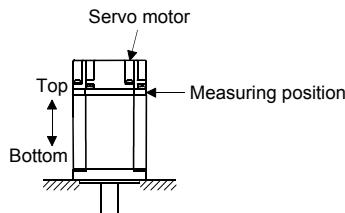

Item	Servo motor HG-RR series (ultra-low inertia/medium capacity)					
	103(B)	153(B)	203(B)	353(B)	503(B)	
Power supply capacity	Refer to "Power supply equipment capacity and generated loss of servo amplifiers" in Servo Amplifier Instruction Manual.					
Continuous running duty (Note 1)	Rated output [kW]	1.0	1.5	2.0	3.5	5.0
	Rated torque [N·m]	3.2	4.8	6.4	11.1	15.9
Maximum torque	[N·m]	8.0	11.9	15.9	27.9	39.8
Rated speed (Note 1)	[r/min]	3000				
Maximum speed	[r/min]	4500				
Instantaneous permissible speed	[r/min]	5175				
Power rate at continuous rated torque	Standard [kW/s]	67.4	120	176	150	211
	With an electromagnetic brake [kW/s]	54.8	101	153	105	163
Rated current	[A]	6.1	8.8	14	23	28
Maximum current	[A]	18	23	37	58	70
Moment of inertia J	Standard [$\times 10^{-4}$ kg·m 2]	1.50	1.90	2.30	8.30	12.0
	With an electromagnetic brake [$\times 10^{-4}$ kg·m 2]	1.85	2.25	2.65	11.8	15.5
Recommended load to motor inertia ratio (Note 2)	5 times or less					
Speed/position detector	22-bit encoder common to absolute position/incremental (resolution per servo motor revolution: 4194304 pulses/rev)					
Oil seal	With					
Insulation class	155 (F)					
Structure	Totally-enclosed, natural-cooling (IP rating: IP65 (Note 3))					
Environment (Note 4)	Ambient temperature	Operation	0 °C to 40 °C (non-freezing)			
		Storage	-15 °C to 70 °C (non-freezing)			
	Ambient humidity	Operation	80 %RH or less (non-condensing)			
		Storage	90 %RH or less (non-condensing)			
	Ambience		Indoors (no direct sunlight), free from corrosive gas, flammable gas, oil mist, dust, and dirt			
	Altitude		1000 m or less above sea level			
	Vibration resistance (Note 5)		X, Y: 24.5 m/s 2			
Vibration rank (Note 6)	V10					
Permissible load for the shaft (Note 7)	L [mm]	45			63	
	Radial [N]	686			980	
	Thrust [N]	196			392	
Mass	Standard [kg]	3.9	5.0	6.2	12	17
	With an electromagnetic brake [kg]	6.0	7.0	8.3	15	21

9. HG-RR SERIES

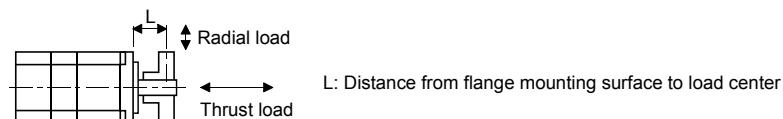

- Note
- When the power supply voltage drops, the output and the rated speed cannot be guaranteed.
 - If the load to motor inertia ratio exceeds the indicated value, contact your local sales office.
 - Except for the shaft-through portion.
 - In the environment where the servo motor is exposed to oil mist, oil, or water, the servo motor of the standard specifications may not be usable. Please contact your local sales office.
 - The following figure shows the vibration directions. The value is the one at the part that indicates the maximum value (normally the opposite to load-side bracket). When the servo motor stops, fretting is likely to occur at the bearing. Therefore, suppress the vibration to about half of the permissible value.

- V10 indicates that the amplitude of a single servo motor is 10 μm or less. The following figure shows the servo motor mounting position for measurement and the measuring position.

- The following shows permissible load for the shaft. Do not subject the shaft to load greater than the value in the specifications list. The value assumes that the load is applied independently.

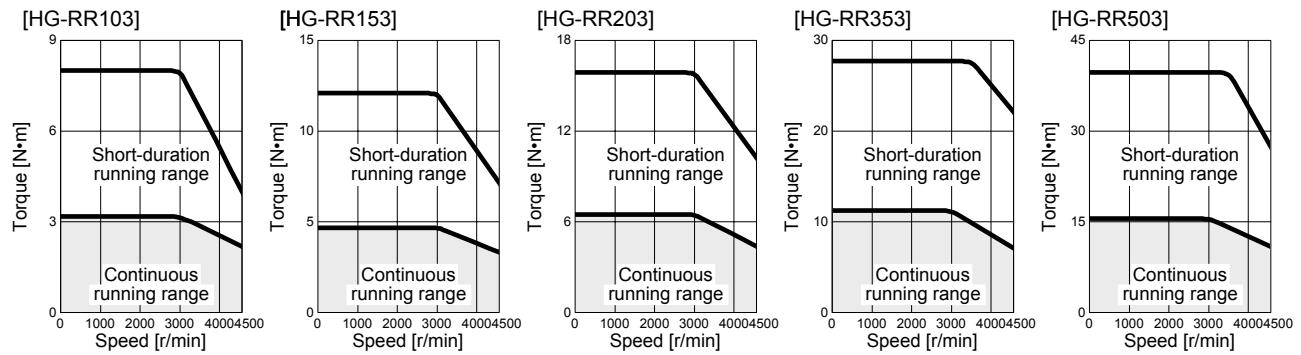

9. HG-RR SERIES

9.3.2 Torque characteristics

POINT

- For the system where the unbalanced torque occurs, such as a vertical axis system, it is recommended that the unbalanced torque of the machine be kept at 70% or less of the motor's rated torque.

When the power supply input of the servo amplifier is 3-phase 200 V AC, the torque characteristic is indicated by the heavy line.

9. HG-RR SERIES

9.4 Electromagnetic brake characteristics

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).
- ! CAUTION**
- Before operating the servo motor, be sure to confirm that the electromagnetic brake operates properly.
 - The operation time of the electromagnetic brake differs depending on the power supply circuit you use. Be sure to check the operation delay time with a real machine.

The characteristics of the electromagnetic brake provided for the servo motor with an electromagnetic brake are indicated below.

Item	Servo motor		
	103B/153B/203B	HG-RR series	
353B/503B			
Type (Note 1)	Spring actuated type safety brake		
Rated voltage (Note 4)	24 V DC ⁰ _{-10%}		
Power consumption [W] at 20 °C	19	23	
Coil resistance (Note 6)	[Ω]	30.0	25
Inductance (Note 6)	[H]	0.81	0.70
Brake static friction torque [N·m]		7.0	17
Release delay time (Note 2)	[s]	0.03	0.04
Braking delay time (Note 2)	[s]	DC off	0.03
Permissible braking work	Per braking	[J]	400
	Per hour	[J]	4000
Brake looseness at servo motor shaft (Note 5)	[degrees]	0.2 to 0.6	0.2 to 0.6
Brake life (Note 3)	Number of brakings [times]	20000	20000
	[J]	200	200
Selection example of surge absorbers to be used (Note 7, 8)	For the suppressed voltage 125 V	TND20V-680KB	
	For the suppressed voltage 350 V	TND10V-221KB	

- Note
1. There is no manual release mechanism. When it is necessary to hand-turn the servo motor shaft for machine centering, etc., use a separate 24 V DC power supply to release the brake electrically.
 2. The value for initial gap at 20 °C.
 3. The brake gap will increase as the brake lining wears, but the gap is not adjustable.
The brake life indicated is the number of braking cycles after which adjustment will be required.
 4. Always prepare a power supply exclusively used for the electromagnetic brake.
 5. These are initial values. These are not guaranteed values.
 6. These values are measured values and not guaranteed values.
 7. Select the electromagnetic brake control relay properly, considering the characteristics of the electromagnetic brake and surge absorber. When you use a diode for a surge absorber, the electromagnetic braking time will be longer.
 8. Manufactured by Nippon Chemi-Con Corporation.

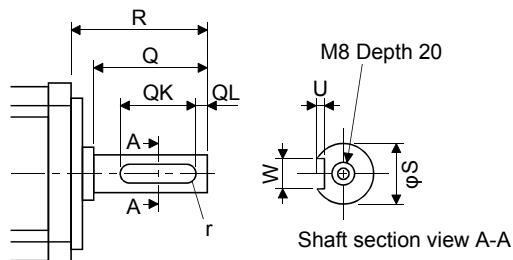

9. HG-RR SERIES

9.5 Servo motors with special shafts

The servo motors with special shafts indicated by the symbol (K) in the table are available. K is the symbol attached to the servo motor model names.

Servo motor	Shaft shape
	Key shaft (without key)
HG-RR_(B)K	K

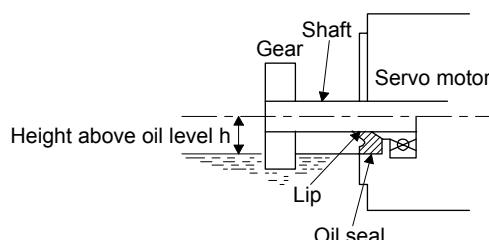

Servo motor	Variable dimensions							
	S	R	Q	W	QK	QL	U	r
HG-RR103(B)K

10. HG-UR SERIES

10.3 Standard specifications

10.3.1 Standard specifications list

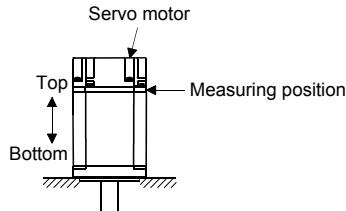

Item	Servo motor HG-UR 2000 r/min series (flat type/medium capacity)					
	72(B)	152(B)	202(B)	352(B)	502(B)	
Power supply capacity	Refer to "Power supply equipment capacity and generated loss of servo amplifiers" in Servo Amplifier Instruction Manual.					
Continuous running duty (Note 1)	Rated output [kW]	0.75	1.5	2.0	3.5	5.0
	Rated torque [N·m]	3.6	7.2	9.5	16.7	23.9
Maximum torque	[N·m]	10.7	21.5	28.6	50.1	71.6
Rated speed (Note 1)	[r/min]	2000				
Maximum speed	[r/min]	3000			2500	
Instantaneous permissible speed	[r/min]	3450			2875	
Power rate at continuous rated torque	Standard [kW/s]	12.3	23.2	23.9	36.5	49.6
	With an electromagnetic brake [kW/s]	10.3	21.2	19.5	32.8	46.0
Rated current	[A]	5.4	9.7	14	23	28
Maximum current	[A]	16	29	42	69	84
Moment of inertia J	Standard [$\times 10^{-4}$ kg·m 2]	10.4	22.1	38.2	76.5	115
	With an electromagnetic brake [$\times 10^{-4}$ kg·m 2]	12.5	24.2	46.8	85.1	124
Recommended load to motor inertia ratio (Note 2)	15 times or less					
Speed/position detector	22-bit encoder common to absolute position/incremental (resolution per servo motor revolution: 4194304 pulses/rev)					
Oil seal	With					
Insulation class	155 (F)					
Structure	Totally-enclosed, natural-cooling (IP rating: IP65 (Note 3))					
Environment (Note 4)	Ambient temperature	Operation	0 °C to 40 °C (non-freezing)			
		Storage	-15 °C to 70 °C (non-freezing)			
	Ambient humidity	Operation	80 %RH or less (non-condensing)			
		Storage	90 %RH or less (non-condensing)			
	Ambience		Indoors (no direct sunlight), free from corrosive gas, flammable gas, oil mist, dust, and dirt			
	Altitude		1000 m or less above sea level			
	Vibration resistance (Note 5)		X, Y: 24.5 m/s 2	X: 24.5 m/s 2 Y: 49 m/s 2		
Vibration rank (Note 6)	V10					
Permissible load for the shaft (Note 7)	L [mm]	55		65		
	Radial [N]	637		882	1176	
	Thrust [N]	490		784		
Mass	Standard [kg]	8.0	11	16	20	24
	With an electromagnetic brake [kg]	10	13	22	26	30

10. HG-UR SERIES

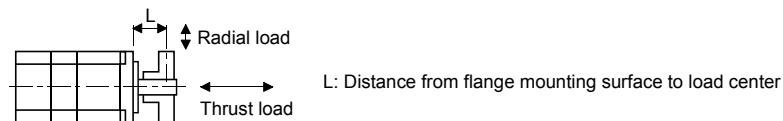

- Note
- When the power supply voltage drops, the output and the rated speed cannot be guaranteed.
 - If the load to motor inertia ratio exceeds the indicated value, contact your local sales office.
 - Except for the shaft-through portion.
 - In the environment where the servo motor is exposed to oil mist, oil, or water, the servo motor of the standard specifications may not be usable. Please contact your local sales office.
 - The following figure shows the vibration directions. The value is the one at the part that indicates the maximum value (normally the opposite to load-side bracket). When the servo motor stops, fretting is likely to occur at the bearing. Therefore, suppress the vibration to about half of the permissible value.

- V10 indicates that the amplitude of a single servo motor is 10 μm or less. The following figure shows the servo motor mounting position for measurement and the measuring position.

- The following shows permissible load for the shaft. Do not subject the shaft to load greater than the value in the specifications list. The value assumes that the load is applied independently.

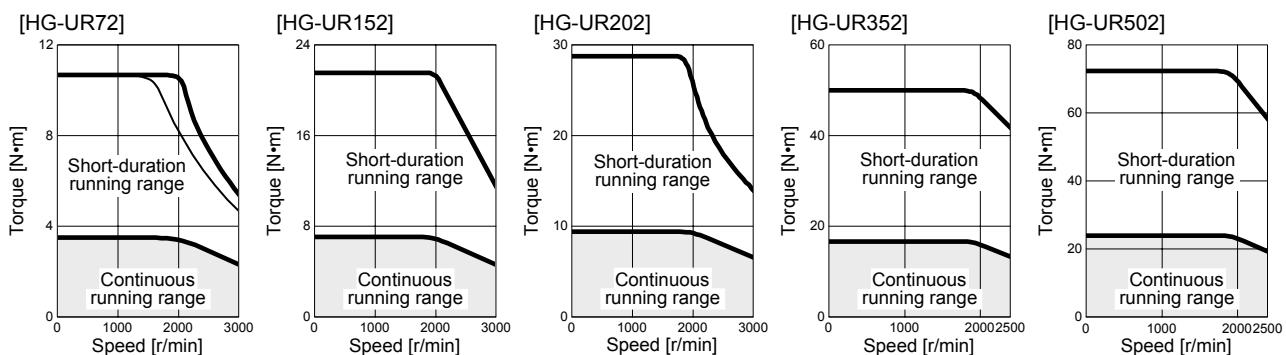

10. HG-UR SERIES

10.3.2 Torque characteristics

POINT

- For the system where the unbalanced torque occurs, such as a vertical axis system, it is recommended that the unbalanced torque of the machine be kept at 70% or less of the motor's rated torque.

When the power supply input of the servo amplifier is 3-phase 200 V AC or 1-phase 230 V AC, the torque characteristic is indicated by the heavy line. For the 1-phase 200 V AC power supply, part of the torque characteristic is indicated by the thin line. HG-UR72 supports 1-phase power supply input.

10. HG-UR SERIES

10.4 Electromagnetic brake characteristics

- The electromagnetic brake is provided to prevent a drop at a power failure or servo alarm occurrence during vertical drive or to hold a shaft at a stop. Do not use it for normal braking (including braking at servo-lock).
- ! CAUTION**
- Before operating the servo motor, be sure to confirm that the electromagnetic brake operates properly.
 - The operation time of the electromagnetic brake differs depending on the power supply circuit you use. Be sure to check the operation delay time with a real machine.

The characteristics of the electromagnetic brake provided for the servo motor with an electromagnetic brake are indicated below.

Item	Servo motor		HG-UR series	
	72B/152B	202B/352B/502B		
Type (Note 1)			Spring actuated type safety brake	
Rated voltage (Note 4)			24 V DC ⁹ _{-10%}	
Power consumption [W] at 20 °C	19	34		
Coil resistance (Note 6) [Ω]	29.0	17.0		
Inductance (Note 6) [H]	0.8	1.17		
Brake static friction torque [N·m]	8.5	44		
Release delay time (Note 2) [s]	0.04	0.1		
Braking delay time (Note 2) [s]	DC off	0.03	0.03	
Permissible braking work	Per braking [J]	400	4500	
	Per hour [J]	4000	45000	
Brake looseness at servo motor shaft (Note 5) [degrees]			0.2 to 0.6	0.2 to 0.6
Brake life (Note 3)	Number of brakings [times]	20000	20000	
	Work per braking [J]	200	1000	
Selection example of surge absorbers to be used (Note 7, 8)	For the suppressed voltage 125 V	TND20V-680KB		
	For the suppressed voltage 350 V	TND10V-221KB		

- Note
1. There is no manual release mechanism. When it is necessary to hand-turn the servo motor shaft for machine centering, etc., use a separate 24 V DC power supply to release the brake electrically.
 2. The value for initial gap at 20 °C.
 3. The brake gap will increase as the brake lining wears, but the gap is not adjustable.
The brake life indicated is the number of braking cycles after which adjustment will be required.
 4. Always prepare a power supply exclusively used for the electromagnetic brake.
 5. These are initial values. These are not guaranteed values.
 6. These values are measured values and not guaranteed values.
 7. Select the electromagnetic brake control relay properly, considering the characteristics of the electromagnetic brake and surge absorber. When you use a diode for a surge absorber, the electromagnetic braking time will be longer.
 8. Manufactured by Nippon Chemi-Con Corporation.

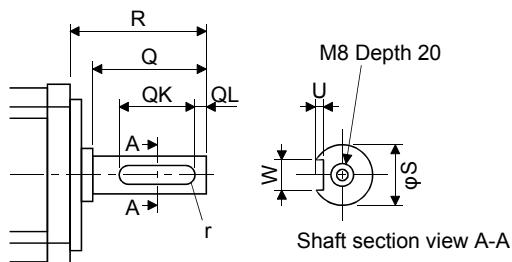

10. HG-UR SERIES

10.5 Servo motors with special shafts

The servo motors with special shafts indicated by the symbol (K) in the table are available. K is the symbol attached to the servo motor model names.

Servo motor	Shaft shape
	Key shaft (without key)
HG-UR_(B)K	K

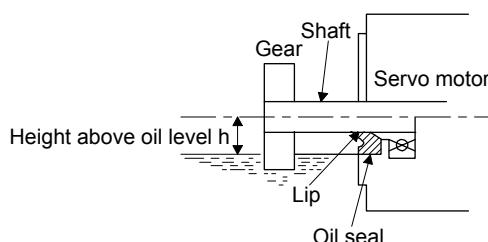

Servo motor	Variable dimensions							
	S	R	Q	W	QK	QL	U	r
HG-UR72(B)K	22h6	55	50	6 ⁰ _{-0.036}	42	3	3.5 ^{+0.1} ₀	3
HG-UR152(B)K	28h6	55	50	8 ⁰ _{-0.036}	40	3	4 ^{+0.2} ₀	4
HG-UR202(B)K								
HG-UR352(B)K	35 ^{+0.010} ₀	65	60	10 ⁰ _{-0.036}	50	5	5 ^{+0.2} ₀	5
HG-UR502(B)K								

10.6 Oil seal

The oil seal prevents the entry of oil into the servo motor.

Install the servo motor horizontally, and set the oil level in the gear box to be lower than the oil seal lip always.

Servo motor	Oil level h [mm]
HG-UR72(B) HG-UR152(B)	20
HG-UR202(B) HG-UR352(B) HG-UR502(B)	25

10. HG-UR SERIES

10.7 Dimensions

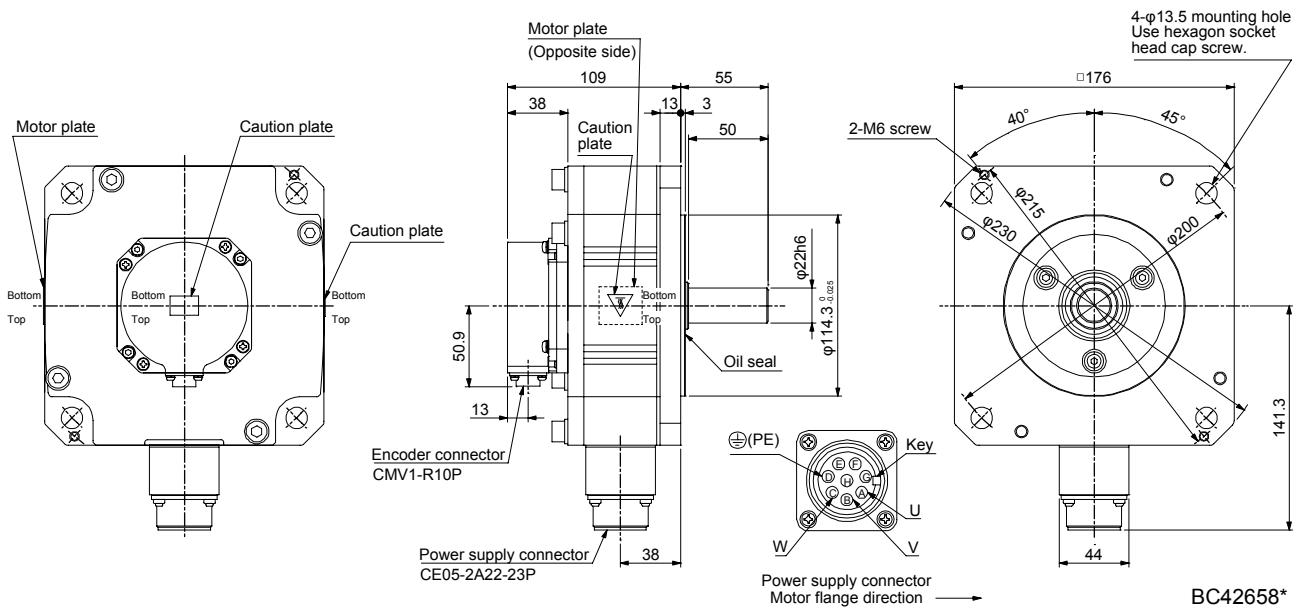

Moment of inertia on the table is the value calculated by converting the total value of moment of inertia for servo motor and electromagnetic brake with servo motor shaft.

The dimensions without tolerances are general tolerance.

10.7.1 Standard (without an electromagnetic brake)

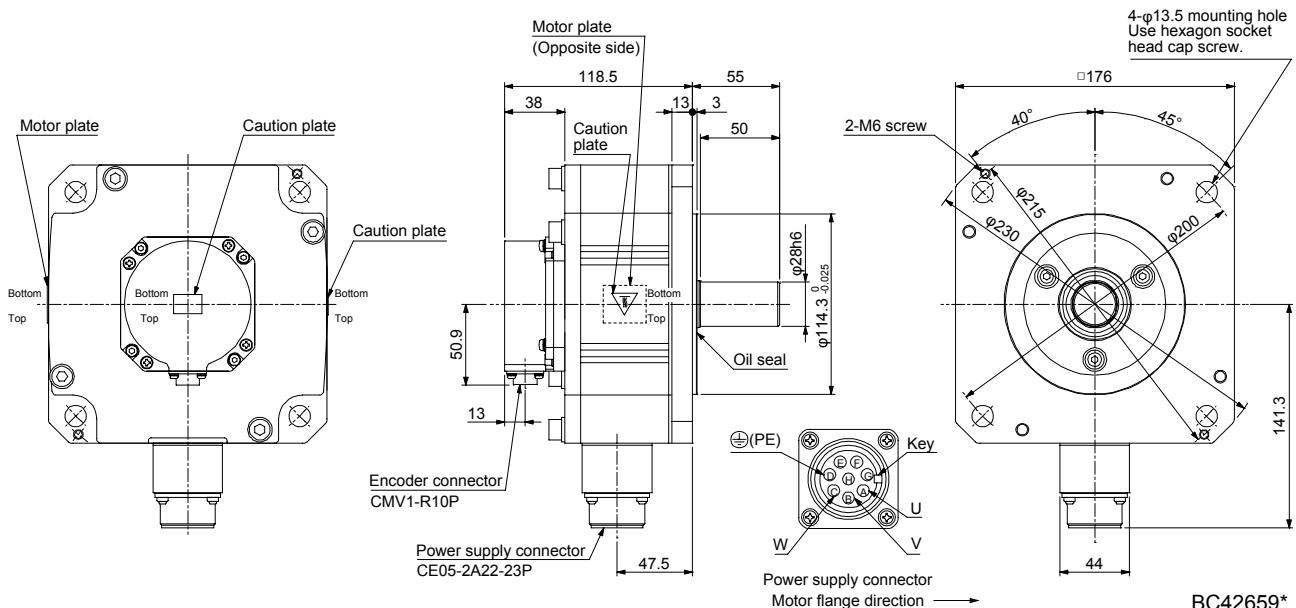

Model	Output [kW]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-UR72	0.75	10.4	8.0

[Unit: mm]

Model	Output [kW]	Moment of inertia J [$\times 10^{-4}$ kg·m 2]	Mass [kg]
HG-UR152	1.5	22.1	11

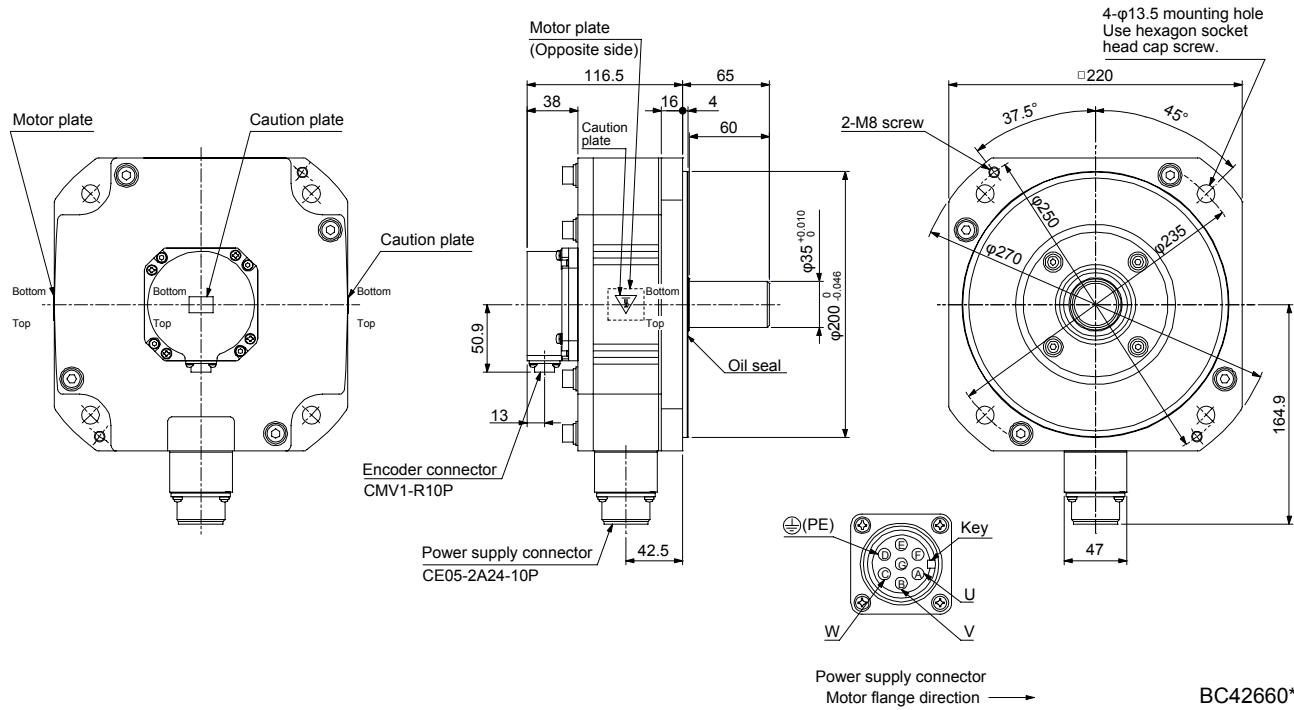

[Unit: mm]

10. HG-UR SERIES

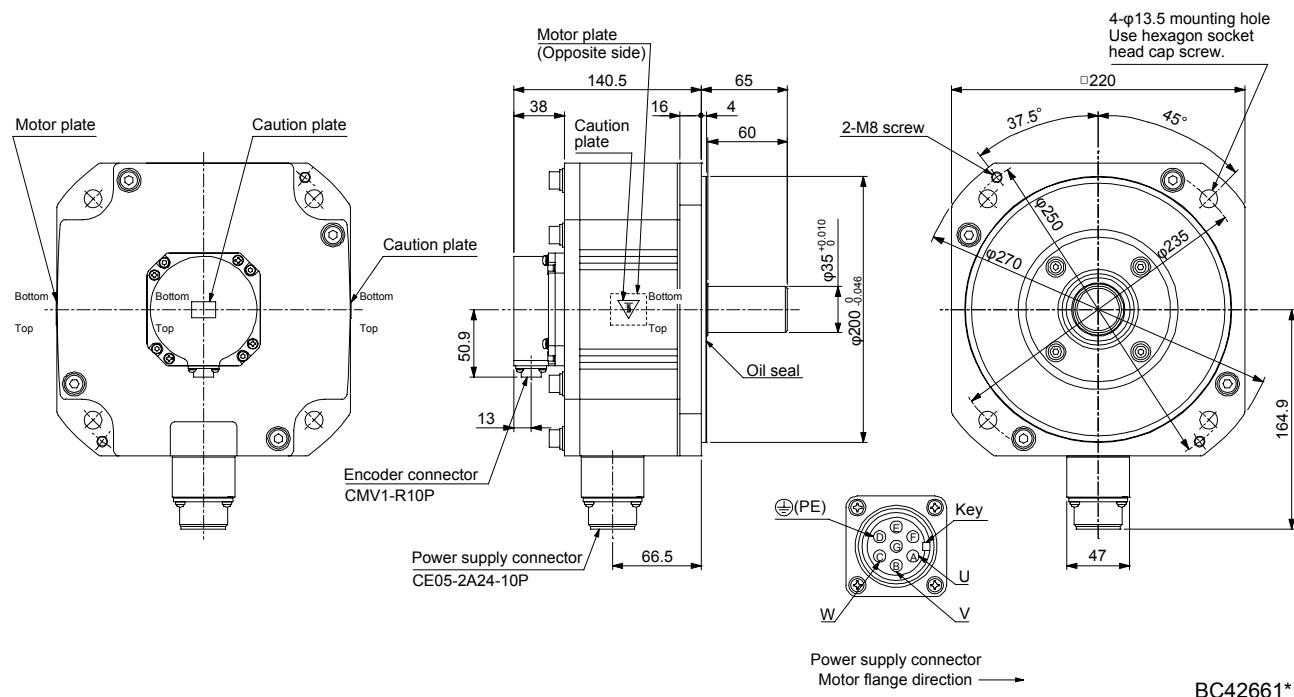

Model	Output [kW]	Moment of inertia J [$\times 10^{-4}$ kg·m ²]	Mass [kg]

Panasonic	Panasonic Corporation
Hirose Electric	Hirose Electric Co., Ltd.
Molex	Molex

APPENDIX

App. 3 Compliance with the CE marking

App. 3.1 What is CE marking?

The CE marking is mandatory and must be affixed to specific products placed on the European Union. When a product conforms to the requirements, the CE marking must be affixed to the product. The CE marking also applies to machines and equipment incorporating servos.

(1) EMC directive

The EMC directive applies to the servo motor alone. Therefore servo motor is designed to comply with the EMC directive. The EMC directive also applies to machines and equipment incorporating servo motors.

(2) Low voltage directive

The low voltage directive also applies to the servo motor alone. The servo motor is designed to comply with the low voltage directive.

App. 3.2 For compliance

Be sure to perform an appearance inspection of every unit before installation. In addition, have a final performance inspection on the entire machine/system, and keep the inspection record.

(1) Wiring

Use wirings which complies with EN for the servo motor power. Complying EN products are available as options. Refer to chapter 5 for details of the options.

(2) Performing EMC tests

When EMC tests are run on a machine and device into which the servo motor and servo motor have been installed, it must conform to the electromagnetic compatibility (immunity/emission) standards after it has satisfied the operating environment and electrical equipment specifications.

For EMC directive conforming methods about servo amplifiers and servo motors, refer to the EMC Installation Guidelines (IB(NA)67310) and each Servo Amplifier Instruction Manual.

APPENDIX

App. 4 Compliance with UL/CSA standard

Use the UL/CSA standard-compliant model of servo motor. For the latest information of compliance, contact your local sales office.

Unless otherwise specified, the handling, performance, specifications, etc. of the UL/CSA standard-compliant models are the same as those of the standard models.

(1) Flange size

The servo motor is compliant with the UL/CSA standard when it is mounted on the flanges made of aluminum whose sizes are indicated in the following table.

The rated torque of the servo motor under the UL/CSA standard indicates the continuous permissible torque value that can be generated when it is mounted on the flange specified in this table and used in the environment of 0 °C to 40 °C ambient temperature. Therefore, to conform to the UL/CSA standard, mount the servo motor on a flange with a heat radiating effect equivalent to that of this flange.

Flange size [mm]	Servo motor				
	HG-MR/HG-KR	HG-SR	HG-JR	HG-RR	HG-UR
250 × 250 × 6	053 13 23				
250 × 250 × 12		51 81 43 52(4) 102(4) 152(4)	53(4) 73(4) 103(4) 153(4) 203(4)	103 153 203

HG-UR502		

Note. Refer to each servo amplifier instruction manual for crimp terminals and crimping tools used for connection with the servo amplifier.

APPENDIX

App. 5 Calculation methods for designing

5.1 Specification symbol list

The following symbols are required for selecting the proper servo.

T_a : Acceleration torque	[N·m]	g : Gravitational acceleration ($9.8 \text{ [m/s}^2\text{]}$)
T_d : Deceleration torque	[N·m]	μ : Friction coefficient
T_{Ma} : Torque necessary for acceleration	[N·m]	π : Pi constant (3.14)
T_{Md} : Torque necessary for deceleration	[N·m]	P_f : Number of feedback pulses in position control mode [pulse/rev]
T_{LH} : Load torque converted into equivalent value on servo motor shaft during stop	[N·m]	f : Input pulse frequency in position control mode [pulse/s]
T_L : Load torque converted into equivalent value on servo motor shaft	[N·m]	f_0 : Input pulse frequency during fast feed in position control mode [pulse/s]
T_U : Unbalanced torque	[N·m]	t_{psa} : Acceleration time constant of pulse frequency command in position control mode [s]
T_F : Load friction torque	[N·m]	t_{psd} : Deceleration time constant of pulse frequency command in position control mode [s]
T_B : Brake static friction torque	[N·m]	K_p : Position loop gain 1 [rad/s]
T_{Lo} : Load torque on load shaft	[N·m]	T_p : Position control time constant ($T_p = 1/K_p$) [s]
T_{rms} : Continuous effective load torque converted into equivalent value on servo motor shaft	[N·m]	Δl : Feed per feedback pulses in position control mode [mm/pulse] Travel distance per pulse
J_L : Load inertia moment converted into equivalent value on servo motor shaft	[$\times 10^{-4} \text{ kg}\cdot\text{m}^2$]	Δl_0 : Feed per command pulse in position control mode [mm/pulse] Travel distance per command pulse
J_{Lo} : Load inertia moment on load shaft	[$\times 10^{-4} \text{ kg}\cdot\text{m}^2$]	I : Feed [mm]
J_M : Servo motor's rotor inertia moment	[$\times 10^{-4} \text{ kg}\cdot\text{m}^2$]	P : Number of internal command pulses [pulse]
N : Servo motor speed	[r/min]	t_s : Internal settling time [s]
N_0 : Servo motor speed during fast feed	[r/min]	t_0 : Positioning time [s]
N_{Lo} : Load shaft speed during fast feed	[r/min]	t_c : Time at constant speed of servo motor in one cycle [s]
V : Moving part speed	[mm/min]	t_l : Stopping time in one cycle [s]
V_0 : Moving part speed during fast feed	[mm/min]	ΔA : Positioning accuracy [mm]
P_B : Ball screw lead	[mm]	ϵ : Number of droop pulses [pulse]
Z_1 : Number of gear teeth on servo motor shaft		ΔS : Travel distance per servo motor revolution [mm/rev]
Z_2 : Number of gear teeth on load gear		W : Mass [kg]
n : Gear ratio $n = \frac{Z_2}{Z_1}$		L_{max} : Maximum coasting distance [mm]
Speed reduced when $n > 1$, Speed increased when $n < 1$		
η : Drive system efficiency		

APPENDIX

App. 5.2 Position resolution and electronic gear setting

Position resolution (travel distance per pulse Δl) is determined by travel distance per servo motor revolution ΔS and the number of encoder feedback pulses P_f , and is represented by Equation 5.1. As the number of feedback pulses depends on the servo motor series, refer to standard specifications in the chapter of each servo motor series.

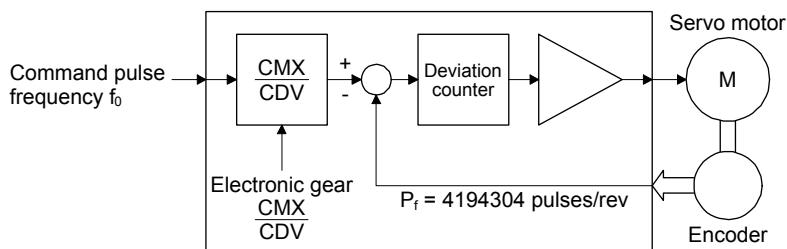

$$\Delta l = \frac{\Delta S}{P_f} \dots \dots \dots \quad (5.1)$$

Δl : Travel distance per pulse [mm/pulse]

ΔS : Travel distance per servo motor revolution [mm/rev]

P_f : Number of feedback pulses [pulse/rev]

Since Δl has the relation represented by equation 5.1, its value is fixed in the control system after the drive system and encoder have been determined. However, travel distance per command pulse can be set as desired using the parameters.

As shown above, command pulses are multiplied by CMX/CDV set in the parameters to be position control pulses. Travel distance per command pulse Δl_0 is expressed by Equation 5.2.

$$\Delta l_0 = \frac{\Delta S}{P_f} \cdot \frac{CMX}{CDV} = \Delta l \cdot \frac{CMX}{CDV} \dots \dots \dots \quad (5.2)$$

CMX : Electronic gear (command pulse multiplication numerator)

CDV : Electronic gear (command pulse multiplication denominator)

Using the above relation, travel distance per command pulse can be set to a value without fraction.

[Setting example]

Find a parameter value for $\Delta l_0 = 0.001$ mm/pulse in a drive system where ball screw lead $P_B = 10$ mm and reduction ratio $1/n = 1$.

The encoder feedback pulses P_f of the HG-KR = 4194304 pulses/rev.

Since $\Delta S = 10$ mm/rev, the following is obtained according to equation 5.2.

$$\frac{CMX}{CDV} = \Delta l_0 \cdot \frac{P_f}{\Delta S} = 0.001 \cdot \frac{4194304}{10} = \frac{262144}{625}$$

APPENDIX

Relation between position resolution Δl and overall accuracy

Positioning accuracy of machine is the sum of electrical errors and mechanical errors. Normally, provisions should be made so that positioning accuracy are not affected by electrical system errors. As a guideline, Equation 5.3 should be satisfied.

$$\Delta l < \left[\frac{1}{5} \sim \frac{1}{10} \right] \cdot \Delta \varepsilon \quad \dots \dots \dots \quad (5.3)$$

Δl : Travel distance per feedback pulse [mm/pulse]

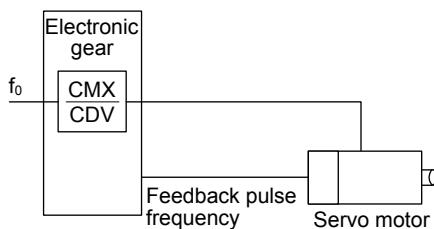

$\Delta \varepsilon$: Positioning accuracy [mm]

App. 5.3 Speed and command pulse frequency

The servo motor is run at a speed where the command pulses and feedback pulses are equivalent.

Therefore, the command pulse frequency and feedback pulse frequency are equivalent. The following shows the relation including the parameter settings (CMX and CDV). (Refer to the following diagram.)

$$f_0 \cdot \frac{CMX}{CDV} = P_f \cdot \frac{N_0}{60} \quad \dots \dots \dots \quad (5.4)$$

f_0 : Command pulse frequency [pulse/s]
(differential line driver)

CMX: Electronic gear
(command pulse multiplication numerator)

CDV: Electronic gear
(command pulse multiplication denominator)

N_0 : Servo motor speed [r/min]

P_f : Number of feedback pulses [pulse/rev]
($P_f = 4194304$ for HG-KR)

According to equation 5.4, the following equations may be used to obtain the electronic gear and command pulse frequency to rotate the servo motor at N_0 .

- Electronic gear

$$\frac{CMX}{CDV} = P_f \cdot \frac{N_0}{60} \cdot \frac{1}{f_0} \quad \dots \dots \dots \quad (5.5)$$

- Command pulse frequency

$$f_0 = P_f \cdot \frac{N_0}{60} \cdot \frac{CDV}{CMX} \quad \dots \dots \dots \quad (5.6)$$

APPENDIX

[Setting example]

Obtain the command pulse frequency required to run the HG-KR at 3000 r/min.

The following result will be found according to equation 5.6.

$$f_0 = 4194304 \cdot \frac{N_0}{60} \cdot \frac{CDV}{CMX}$$

(Command pulse frequency)

$$= 4194304 \cdot \frac{3000}{60} \cdot 1$$

$$= 209715200 \text{ [pulses/s]}$$

However, as the maximum input command pulse frequency in the differential line driver type is 4 Mpulses/s for MR-J4 servo amplifier, 209715200 pulses/s cannot be entered.

To run the servo motor at the speed of 3000 r/min at not more than 4 Mpulses/s, the electronic gear setting must be changed. This electronic gear is found by equation 5.5.

$$\frac{CMX}{CDV} = 4194304 \cdot \frac{3000}{60} \cdot \frac{1}{4 \cdot 10^6}$$

(Electronic gear)

$$= \frac{32768}{625}$$

Therefore, the parameters are set to CMX = 32768 and CDV = 625.

APPENDIX

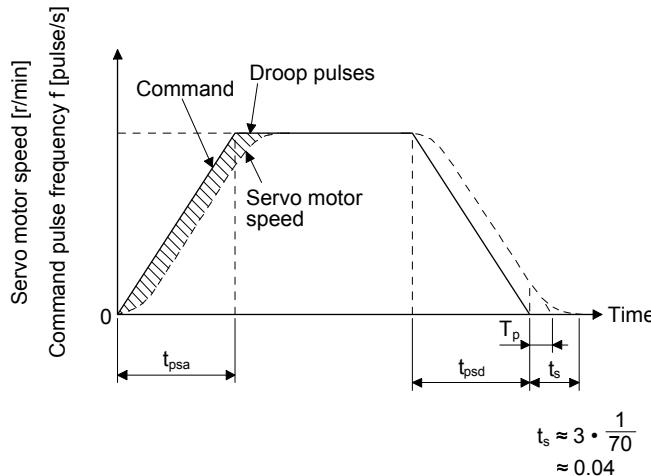

5.4 Stopping characteristics

(1) Droop pulses (ε)

When you use a pulse train command to run the servo motor, the relation between the command pulse frequency and servo motor speed will be as follows. The difference between the command pulses and feedback pulses during acceleration are called droop pulses, which are accumulated in the servo amplifier deviation counter. Equation 5.7 defines a relation between the command pulse frequency (f) and position control gain 1 (K_p).

Supposing that the value of position control gain 1 is 70 rad/s, the droop pulses during operation will be as follows at the command pulse frequency of 200 kpulses/s according to equation 5.7.

$$\varepsilon \approx \frac{200 \cdot 10^3}{70} \approx 2858 \text{ [pulses]}$$

APPENDIX

- (2) Settling time (t_s) during linear acceleration/deceleration

Since droop pulses still exist regardless of zero command pulse, settling time (t_s) is required until the servo motor stops.

Set the operation pattern in consideration for the settling time.

The settling time (t_s) value is obtained according to equation 5.8.

$$t_s \approx 3 \cdot T_p$$

*When $K_p = 70$ [rad/s], $t_s \approx 0.04$ [s]. (above diagram)

The settling time (t_s) indicates the time required for the servo motor to stop in the necessary positioning accuracy range. This does not always mean that the servo motor has stopped completely. Thus, especially when the servo motor is used in high-duty operation and positioning accuracy has no margin for travel distance per pulse (Δl), the value obtained by equation 5.8 must be increased.

The settling time (t_s) will vary with the moving part conditions. Especially when the load friction torque is large, movement may be unstable near the stopping position.

APPENDIX

App. 5.5 Capacity selection

As a first step, confirm the load conditions and temporarily select the servo motor capacity.

Then, determine the operation pattern, calculate required torques according to the following equations, and check that the servo motor of the initially selected capacity may be used for operation .

(1) Initial selection of servo motor capacity

After calculating the load torque (T_L) and load moment of inertia (J_L), select a servo motor which will satisfy the following two relations.

Servo motor rated torque > T_L

Servo motor $J_M > J_L/m$

$m = 3$: High duty (more than 100 times/min.)

Settling time; 40 ms or less

$m = 5$: Middle frequency (60 times/min. to 100 times/min.)

Settling time; 100 ms or less

$m =$ Permissible load moment of inertia: Low duty (less than 60 times/min.)

Settling time; more than 100 ms

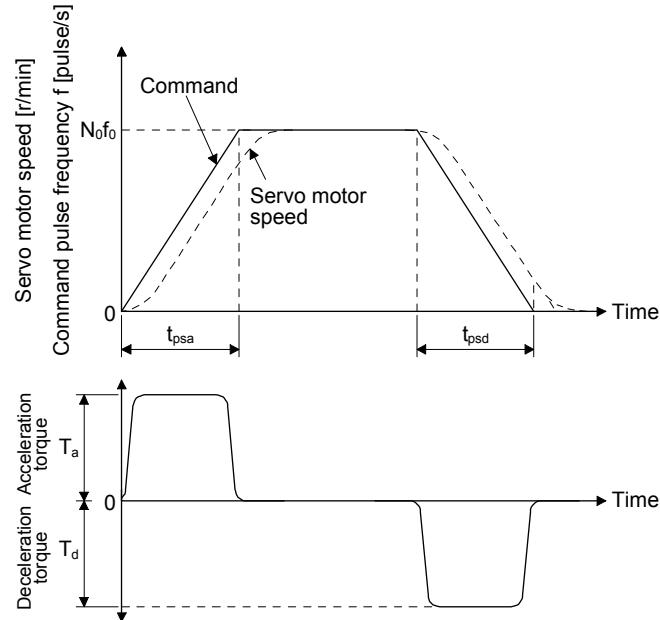

Find the acceleration and deceleration torques and continuous effective load torque as described in (2) to make a final selection. For high-duty positioning, the load moment of inertia (J_L) value should be as small as possible.

If positioning is infrequent as in line control, the load moment of inertia (J_L) value may be slightly larger than in the above conditions.

APPENDIX

(2) Acceleration and deceleration torques

The following equations are used to calculate the acceleration and deceleration torques in the following operation pattern.

$$\text{Acceleration torque } T_a = \frac{(J_L + J_M) \cdot N_0}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psa}} \quad \dots \dots \dots \quad (5.9)$$

$$\text{Deceleration torque } T_d = \frac{(J_L + J_M) \cdot N_0}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psd}} \quad \dots \dots \dots \quad (5.10)$$

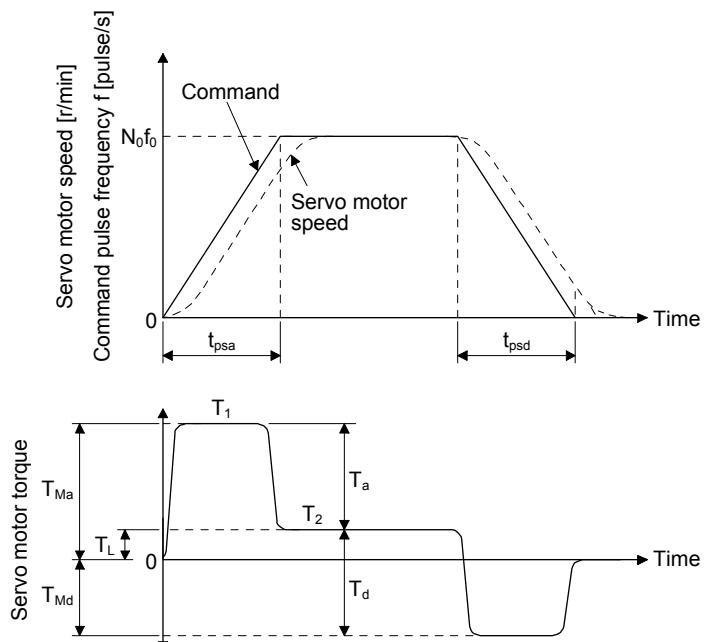

APPENDIX

(3) Torques required for operation

POINT

- For the gain adjustment, check that the machine operates below the maximum torque of the servo motor. It is recommended that generated torque during operation is under 90% of the maximum torque of the servo motor.

Torques required for the servo motor are the highest during acceleration. If the servo motor torque found with equation 5.11 to 5.13 exceed the maximum torque, the motor will not accelerate as commands. Set the calculated value within the servo motor's maximum torque. Since a friction load is normally applied during deceleration, only the acceleration torque needs to be considered. In the regenerative mode, the value found by equation 5.13 is negative.

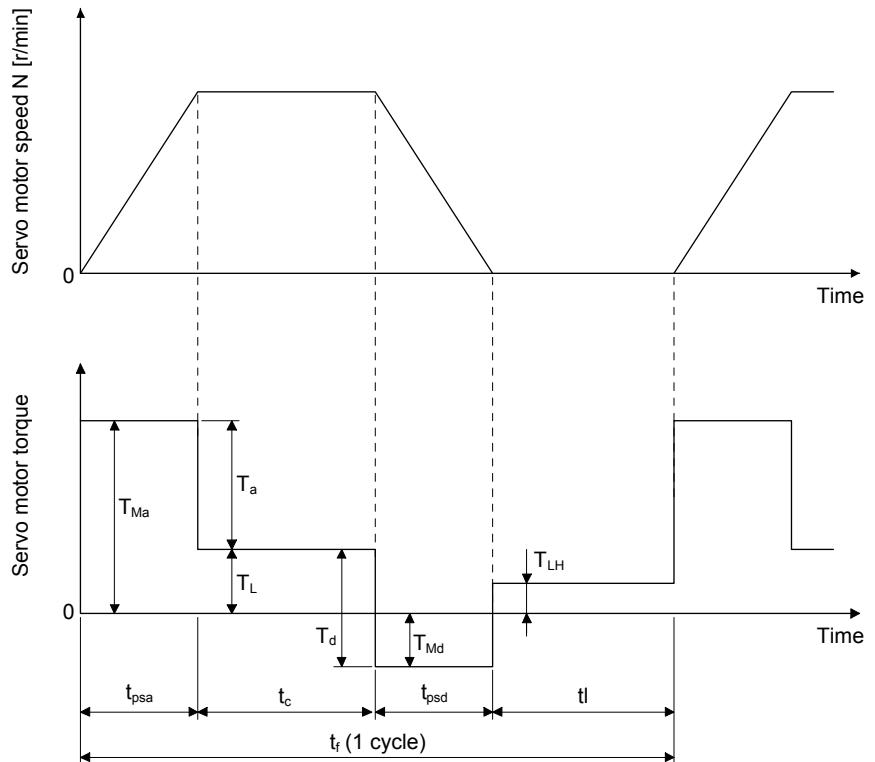

(4) Continuous effective load torque

If the torque required for the servo motor changes with time, the continuous effective load torque should be lower than the rated torque of the servo motor. There may be a servo motor torque delay at the start of acceleration or deceleration due to a delay in the control system. To simplify the calculation, however, it is assumed that constant acceleration and deceleration torques are applied during t_{psa} and t_{psd} .

The following equation is used to calculate the continuous effective load torque in the following operation pattern. T_{LH} indicates the torque applied during a servo motor stop. A large torque may be applied especially during a stop in vertical motion applications, and this must be fully taken into consideration.

During vertical drive, the unbalanced torque T_U will become T_{LH} .

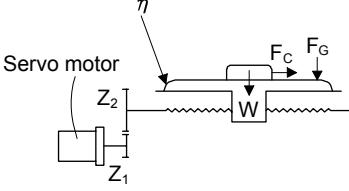

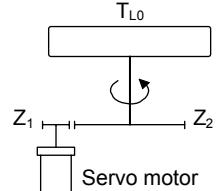

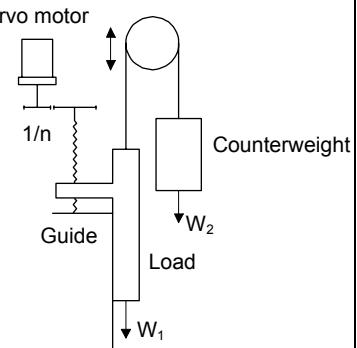

$$T_{rms} = \sqrt{\frac{T_{Ma}^2 \cdot t_{psa} + T_L^2 \cdot t_c + T_{Md}^2 \cdot t_{psd} + T_{LH}^2 \cdot t_l}{t_f}} \quad \dots \quad (5.14)$$

APPENDIX

App. 5.6 Load torque equations

Typical load torque equations are indicated below.

Type	Mechanism	Equation
Linear movement		$T_L = \frac{F}{2 \cdot 10^3 \cdot \pi \cdot \eta} \cdot \frac{V}{N} = \frac{F \cdot \Delta S}{2 \cdot 10^3 \cdot \pi \cdot \eta} \quad \dots \dots \dots \quad (5.15)$ <p>F: Force in the axial direction of the machine in linear motion [N] F in equation 5.15 is obtained with equation 5.16 when the table is moved, for example, as shown in the left diagram. $F = F_c + \mu \cdot (W \cdot g + F_G) \quad \dots \dots \dots \quad (5.16)$ <p>F_c: Force applied in the axial direction of the moving part [N] F_G: Tightening force of the table guide surface [N] W: Full mass of the moving part [kg]</p> </p>
Rotary movement		$T_L = \frac{1}{n} \cdot \frac{1}{\eta} \cdot T_{L0} + T_F \quad \dots \dots \dots \quad (5.17)$ <p>T_F: Load friction torque converted into equivalent value on servo motor shaft [N·m]</p>
Vertical movement		<p>During rise</p> $T_L = T_U + T_F \quad \dots \dots \dots \quad (5.18)$ <p>During fall</p> $T_L = -T_U \cdot \eta^2 + T_F \quad \dots \dots \dots \quad (5.19)$ <p>T_F: Friction torque of the moving part [N·m]</p> $T_U = \frac{(W_1 - W_2) \cdot g}{2 \cdot 10^3 \cdot \pi \cdot \eta} \cdot \frac{V}{N} = \frac{(W_1 - W_2) \cdot g \cdot \Delta S}{2 \cdot 10^3 \cdot \pi \cdot \eta} \quad \dots \dots \dots \quad (5.20)$ $T_F = \frac{\mu(W_1 - W_2) \cdot g \cdot \Delta S}{2 \cdot 10^3 \cdot \pi \cdot \eta} \quad \dots \dots \dots \quad (5.21)$ <p>W₁: Mass of load [kg] W₂: Mass of counterweight [kg]</p>

APPENDIX

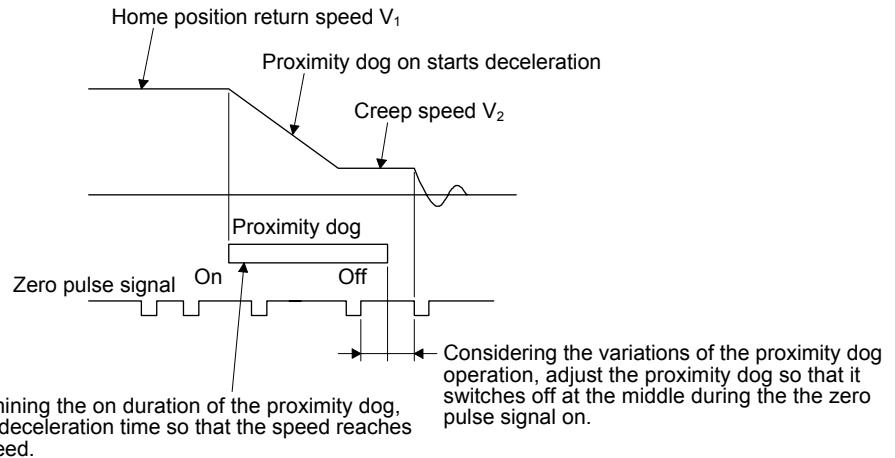

App. 5.7 Load moment of inertia equations

Typical load moment of inertia equations is indicated below.

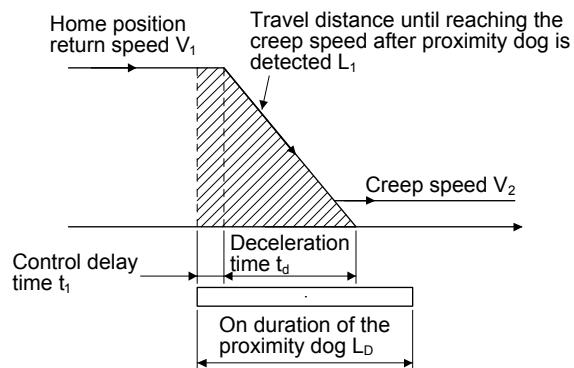

APPENDIX

App. 5.8 Precautions for home position return

When a general positioning unit is used, the sequence of events is as shown in the following figure.

- (1) When determining the on duration of the proximity dog, consider the delay time of the control section and the deceleration time so that the creep speed is attained. If the proximity dog signal switches off during deceleration, precise home position return cannot be performed.

Travel distance L_1 in the chart can be obtained by equation 5.28.

$$L_1 = \frac{1}{60} \cdot V_1 \cdot t_1 + \frac{1}{120} \cdot V_1 \cdot t_d \cdot \left\{ 1 - \left(\frac{V_2}{V_1} \right)^2 \right\} + \frac{1}{60} \cdot V_1 \cdot T_P \quad \dots \quad (5.28)$$

On duration of the proximity dog L_D [mm] must be longer than L_1 obtained by equation 5.28, as indicated in equation 5.29.

$$L_D > L_1 \quad \dots \quad (5.29)$$

where,

V_1, V_2 : As shown in the chart [mm/min]

t_1, t_d : As shown in the chart [s]

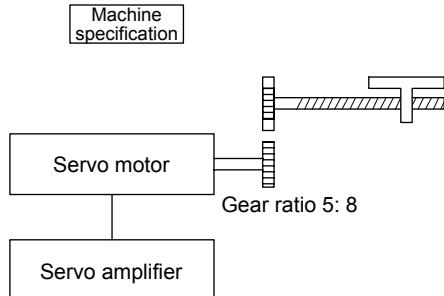

L_1 : As shown in the chart [mm]

L_D : As shown in the chart [mm]

- (2) Set the end (off position) of the proximity dog signal at the middle of two on positions (lows) of the zero pulse signal. If it is set near either on position of the zero pulse signal, the positioning unit is liable to misdetect the zero pulse signal. In this case, a fault will occur, e.g. the home position will shift by one revolution of the servo motor.

APPENDIX

App. 5.9 Selection example

Feed speed of moving part	$V_0 = 30000 \text{ [mm/min]}$
Travel distance per command pulse	$\Delta l_0 = 0.001 \text{ [mm/pulse]}$
Feed per cycle	$I = 400 \text{ [mm]}$
Positioning time	$t_0 = \text{within } 1 \text{ [s]}$
Number of feeds	40 [times/min]
Operation cycle	$t_f = 1.5 \text{ [s]}$
Reduction ratio	$1/n = 5/8$
Moving part mass	$W = 60 \text{ [kg]}$
Drive system efficiency	$\eta = 0.8$
Friction coefficient	$\mu = 0.2$
Ball screw lead	$P_B = 16 \text{ [mm]}$
Ball screw diameter	$D_B = 20 \text{ [mm]}$
Ball screw length	$L_B = 500 \text{ [mm]}$
Gear diameter (servo motor shaft)	$D_{G1} = 25 \text{ [mm]}$
Gear diameter (load shaft)	$D_{G2} = 40 \text{ [mm]}$
Gear face width	$L_G = 10 \text{ [mm]}$
Number of feedback pulses	$P_f = 4194304 \text{ [pulses/rev]}$

(1) Selection of control parameters

Setting of electronic gear (command pulse multiplication numerator/denominator)

There is the following relation between the electronic gear and command resolution Δl_0 .

$$\Delta l_0 = \frac{P_B}{P_f \cdot n} \cdot \left(\frac{CMX}{CDV} \right)$$

When the above machining specifications are substituted in the above equation

$$0.001 = \frac{16}{4194304 \cdot 8/5} \cdot \frac{CMX}{CDV}$$

$$\frac{CMX}{CDV} = \frac{1}{1000} \cdot \frac{4194304 \cdot 8/5}{16} = \frac{262144}{625}$$

$\frac{CMX}{CDV}$ Acceptable as CMX/CDV is within 1/10 to 4000

(2) Servo motor speed

$$N_0 = \frac{V_0}{P_B} \cdot \frac{1}{1/n} = \frac{30000}{16} \cdot \frac{8}{5} = 3000 \text{ [r/min]}$$

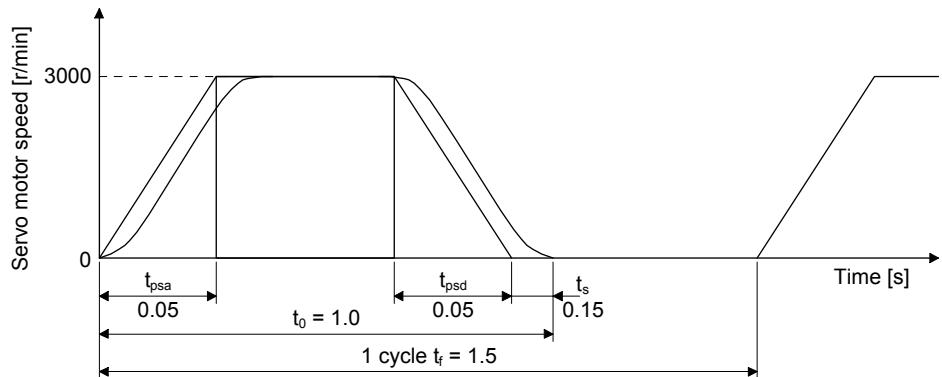

APPENDIX

(3) Acceleration/deceleration time constant

$$t_{psa} = t_{psd} = t_0 - \frac{1}{V_0/60} - t_s = 0.05 \text{ [s]}$$

t_s : Settling time (Here, this is assumed to be 0.15 s.)

(4) Operation pattern

(5) Load torque (converted into equivalent value on servo motor shaft)

Travel distance per servo motor revolution

$$\Delta S = P_B \cdot \frac{1}{n} = 16 \cdot \frac{5}{8} = 10 \text{ [mm]}$$

$$T_L = \frac{\mu \cdot W \cdot g \cdot \Delta S}{2 \cdot 10^3 \cdot \pi \cdot \eta} = \frac{0.2 \cdot 60 \cdot 9.8 \cdot 10}{2 \cdot 10^3 \cdot 3.14 \cdot 0.8} = 0.23 \text{ [N}\cdot\text{m]}$$

APPENDIX

- (6) Load moment of inertia (converted into equivalent value on servo motor shaft)
Moving part

$$J_{L1} = W \cdot \left(\frac{\Delta S \cdot 10^{-3}}{2\pi} \right)^2 = 1.52 \cdot 10^{-4} [\text{kg}\cdot\text{m}^2]$$

Ball screw

$$J_{L2} = \frac{\pi \cdot \rho \cdot L_B}{32} \cdot D_B^4 \cdot \left(\frac{1}{n} \right)^2 = 0.24 \cdot 10^{-4} [\text{kg}\cdot\text{m}^2]$$

$$\rho = 7.8 \cdot 10^3 [\text{kg}/\text{m}^3] \text{ (iron)}$$

Gear (servo motor shaft)

$$J_{L3} = \frac{\pi \cdot \rho \cdot L_G}{32} \cdot D_{G1}^4 = 0.03 \cdot 10^{-4} [\text{kg}\cdot\text{m}^2]$$

Gear (load shaft)

$$J_{L4} = \frac{\pi \cdot \rho \cdot L_G}{32} \cdot D_{G2}^4 \cdot \left(\frac{1}{n} \right)^2 = 0.08 \cdot 10^{-4} [\text{kg}\cdot\text{m}^2]$$

Full load moment of inertia (converted into equivalent value on servo motor shaft)

$$J_L = J_{L1} + J_{L2} + J_{L3} + J_{L4} = 1.9 \cdot 10^{-4} [\text{kg}\cdot\text{m}^2]$$

- (7) Temporary selection of servo motor

Selection conditions

(a) Load torque < servo motor rated torque

(b) Full load moment of inertia < $J_R \cdot$ moment of inertia of the servo motor

J_R : Recommended load to motor inertia ratio

According to above conditions, HG-KR23 (rated torque: 0.64 N·m, maximum torque: 2.2 N·m, moment of inertia: $0.221 \cdot 10^{-4}$ kg·m²) is selected temporarily.

APPENDIX

(8) Acceleration/deceleration torque

Torque necessary for acceleration

$$T_{Ma} = \frac{(J_L/\eta + J_M) \cdot N_0}{9.55 \cdot 10^4 \cdot t_{psa}} + T_L = 1.84 \text{ [N·m]}$$

J_M : Moment of inertia of the servo motor

Torque necessary for deceleration

$$T_{Md} = \frac{-(J_L \cdot \eta + J_M) \cdot N_0}{9.55 \cdot 10^4 \cdot t_{psd}} + T_L = -0.85 \text{ [N·m]}$$

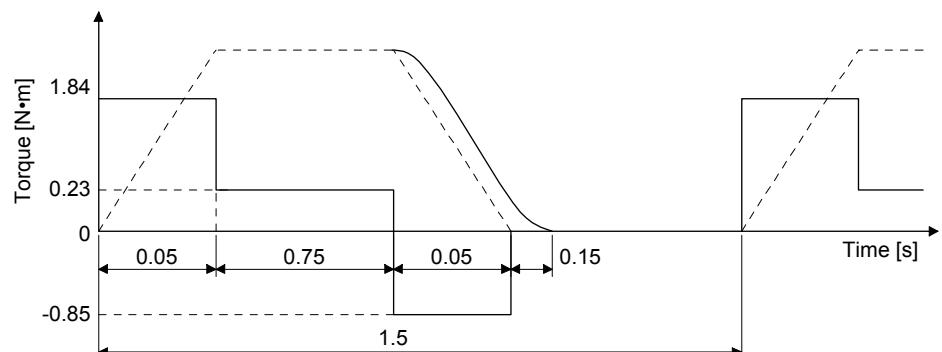

The torque required for the servo motor during acceleration/deceleration must be lower than the servo motor's maximum torque.

(9) Continuous effective load torque

$$T_{rms} = \sqrt{\frac{T_{Ma}^2 \cdot t_{psa} + T_L^2 \cdot t_c + T_{Md}^2 \cdot t_{psd}}{t_f}} = 0.40 \text{ [N·m]}$$

The continuous effective load torque must be lower than the servo motor rated torque.

(10) Torque pattern

(11) Selection results

The following servo motor and servo amplifier are selected as a result of the calculation.

Servo motor: HG-KR23

Servo amplifier: MR-J4-20A

(a) Electronic gear setting

CMX = 262144

CDV = 625

(b) During rapid feed

Servo motor speed $N_0 = 3000$ [r/min]

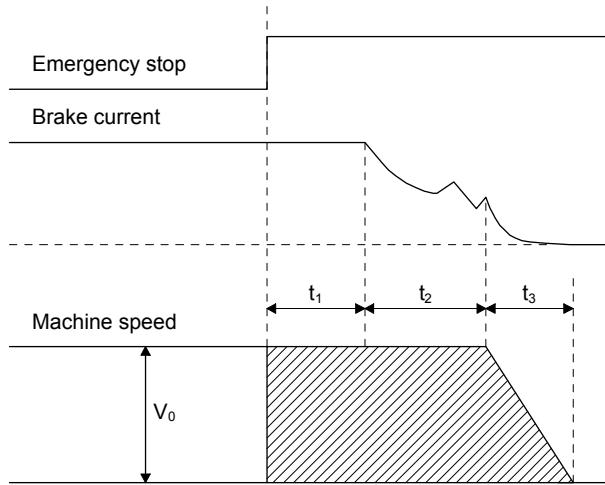

(c) Acceleration/deceleration time constant

$t_{psa} = t_{psd} = 0.05$ [s]

APPENDIX

App. 5.10 Coasting distance of electromagnetic brake

At an emergency stop, the servo motor with an electromagnetic brake stops as the following diagram. Here, the maximum coasting distance (during fast feed) L_{\max} will be the area shown with the diagonal line in the figure and can be calculated approximately with equation 5.30. The effect of the load torque is greater near the stopping area. When the load torque is large, the servo motor will stop faster than the value obtained in the equation.

$$L_{\max} = \frac{V_0}{60} \cdot \left(t_1 + t_2 + \frac{t_3}{2} \right) \dots \dots \dots \quad (5.30)$$

L_{\max} : Maximum coasting distance [mm]

V_0 : Machine's fast feed speed [mm/min]

t_1 : Delay time of control section [s]

t_2 : Braking delay time (Note) [s]

t_3 : Braking time [s]

$$t_3 = \frac{(J_L + J_M) \cdot N_0}{9.55 \cdot 10^4 \cdot (T_L + 0.8 \cdot T_B)}$$

J_L : Load moment of inertia converted into equivalent value on servo motor shaft (Note) [$\times 10^{-4}$ kg·m²]

J_M : Servo motor rotor's inertia moment [$\times 10^{-4}$ kg·m²]

N_0 : Servo motor speed during fast feed [r/min]

T_L : Load torque converted into equivalent value on servo motor shaft [N·m]

T_B : Brake static friction torque (Note) [N·m]

Note. Refer to the chapter of the servo motor series for t_2 and T_B . J_L is moment of inertia of the machine at the servo motor shaft.

App. 5.11 Equation for calculating the electromagnetic brake workload

Calculate the brake workload E_b [J] at an emergency stop with the following equation.

$$E_b = \frac{(J_M + J_L) \cdot N^2}{182} \cdot 10^{-4}$$

N : Servo motor speed [r/min]

J_M : Servo motor rotor's inertia moment [$\times 10^{-4}$ kg·m²]

J_L : Load moment of inertia converted into equivalent value on servo motor shaft [$\times 10^{-4}$ kg·m²]

APPENDIX

App. 6 Selection example of servo motor power cable

POINT
● Selection condition of wire size is as follows.
Wire length: 30 m or less
● Some cables do not fit into the option or the recommended cable clamp. Select a cable clamp according to the cable diameter.

Selection example when using the 600 V grade EP rubber insulated chloroprene sheath cab-tire cable (2PNCT) for servo motor power (U, V, and W) is indicated below.

Warranty

1. Warranty period and coverage

We will repair any failure or defect hereinafter referred to as "failure" in our FA equipment hereinafter referred to as the "Product" arisen during warranty period at no charge due to causes for which we are responsible through the distributor from which you purchased the Product or our service provider. However, we will charge the actual cost of dispatching our engineer for an on-site repair work on request by customer in Japan or overseas countries. We are not responsible for any on-site readjustment and/or trial run that may be required after a defective unit are repaired or replaced.

[Term]

The term of warranty for Product is twelve (12) months after your purchase or delivery of the Product to a place designated by you or eighteen (18) months from the date of manufacture whichever comes first ("Warranty Period"). Warranty period for repaired Product cannot exceed beyond the original warranty period before any repair work.

[Limitations]

- (1) You are requested to conduct an initial failure diagnosis by yourself, as a general rule.
It can also be carried out by us or our service company upon your request and the actual cost will be charged. However, it will not be charged if we are responsible for the cause of the failure.
- (2) This limited warranty applies only when the condition, method, environment, etc. of use are in compliance with the terms and conditions and instructions that are set forth in the instruction manual and user manual for the Product and the caution label affixed to the Product.
- (3) Even during the term of warranty, the repair cost will be charged on you in the following cases:
 - (i) a failure caused by your improper storing or handling, carelessness or negligence, etc., and a failure caused by your hardware or software problem
 - (ii) a failure caused by any alteration, etc. to the Product made on your side without our approval
 - (iii) a failure which may be regarded as avoidable, if your equipment in which the Product is incorporated is equipped with a safety device required by applicable laws and has any function or structure considered to be indispensable according to a common sense in the industry
 - (iv) a failure which may be regarded as avoidable if consumable parts designated in the instruction manual, etc. are duly maintained and replaced
 - (v) any replacement of consumable parts (battery, fan, smoothing capacitor, etc.)
 - (vi) a failure caused by external factors such as inevitable accidents, including without limitation fire and abnormal fluctuation of voltage, and acts of God, including without limitation earthquake, lightning and natural disasters
 - (vii) a failure generated by an unforeseeable cause with a scientific technology that was not available at the time of the shipment of the Product from our company
 - (viii) any other failures which we are not responsible for or which you acknowledge we are not responsible for

2. Term of warranty after the stop of production

- (1) We may accept the repair at charge for another seven (7) years after the production of the product is discontinued. The announcement of the stop of production for each model can be seen in our Sales and Service, etc.
- (2) Please note that the Product (including its spare parts) cannot be ordered after its stop of production.

3. Service in overseas countries

Our regional FA Center in overseas countries will accept the repair work of the Product. However, the terms and conditions of the repair work may differ depending on each FA Center. Please ask your local FA center for details.

4. Exclusion of responsibility for compensation against loss of opportunity, secondary loss, etc.

Whether under or after the term of warranty, we assume no responsibility for any damages arisen from causes for which we are not responsible, any losses of opportunity and/or profit incurred by you due to a failure of the Product, any damages, secondary damages or compensation for accidents arisen under a specific circumstance that are foreseen or unforeseen by our company, any damages to products other than the Product, and also compensation for any replacement work, readjustment, start-up test run of local machines and the Product and any other operations conducted by you.

5. Change of Product specifications

Specifications listed in our catalogs, manuals or technical documents may be changed without notice.

6. Application and use of the Product

- (1) For the use of our General-Purpose AC Servo, its applications should be those that may not result in a serious damage even if any failure or malfunction occurs in General-Purpose AC Servo, and a backup or fail-safe function should operate on an external system to General-Purpose AC Servo when any failure or malfunction occurs.
- (2) Our General-Purpose AC Servo is designed and manufactured as a general purpose product for use at general industries. Therefore, applications substantially influential on the public interest for such as atomic power plants and other power plants of electric power companies, and also which require a special quality assurance system, including applications for railway companies and government or public offices are not recommended, and we assume no responsibility for any failure caused by these applications when used.

In addition, applications which may be substantially influential to human lives or properties for such as airlines, medical treatments, railway service, incineration and fuel systems, man-operated material handling equipment, entertainment machines, safety machines, etc. are not recommended, and we assume no responsibility for any failure caused by these applications when used. We will review the acceptability of the abovementioned applications, if you agree not to require a specific quality for a specific application. Please contact us for consultation.
